MADE IN THE U.S.A.

[titancuttingtools.com](http://titancuttingtools.com)

Our commitment to serve our customers with premium quality, American-Made cutting tools endures as our number one priority. We strive to provide exceptional service with unmatched ship rates for a customer experience that's second to none.

For the last 50 years we've worked continuously to achieve these goals. We are proud to uphold this commitment to our valued customers throughout North America. The "Titan Team" continues to grow, we invite you to join us today.

ALL TITAN USA TOOLS

100% MADE IN THE USA

- 26,000 sq/ft of advanced distribution space
- Over 300 Lista® brand cabinets accommodate all existing and future inventory
- Multiple work-stations to handle all customer requirements, reducing valuable wait times
- Enhanced logistics for superior order processing and shipping
- New and improved shipping, receiving and pick up areas to better service our customers
- Over 13,000 premium quality products available for same day shipping until 6 pm EST with no minimum order requirement
- Orders can be placed online, by email, via EDI, or just call us. Your order will be acknowledged within 15 minutes
- Full catalog available as stand-alone mobile app in both Apple and Android app stores

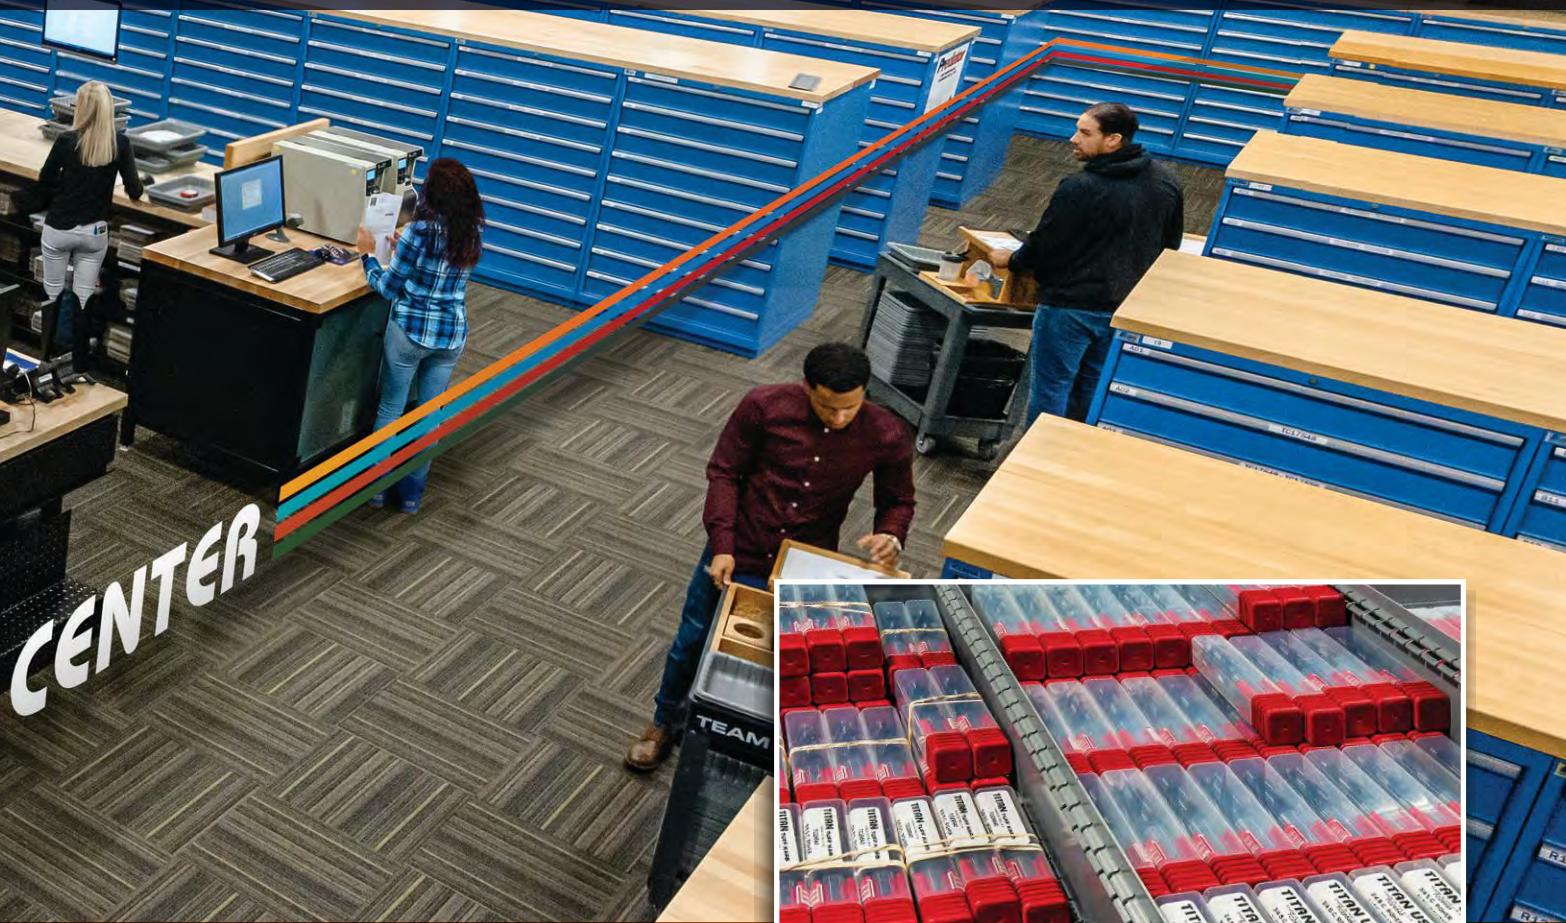

# DISTRIBUTION

Every tool in this catalog is manufactured right here in the USA. You can order with confidence knowing that you are buying the absolute highest quality round cutting tools available. Contact us today to experience the TITAN USA difference.

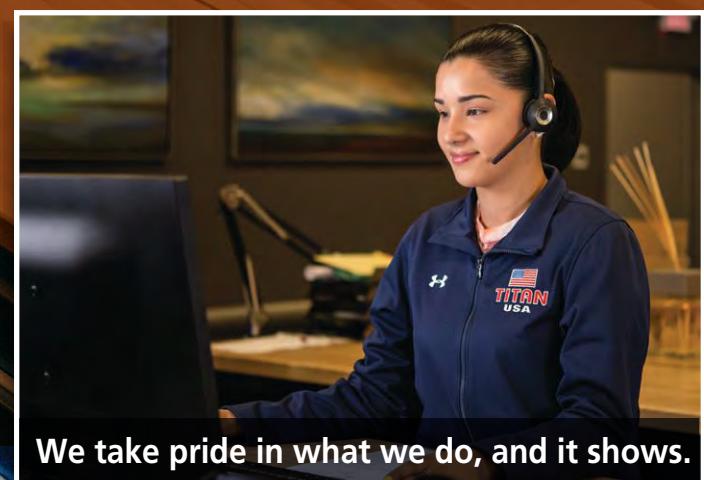

While phone, email, and EDI orders are always accepted, many of our customers prefer to place their orders online through our easy-to-use Titan USA website at: [titancuttingtools.com](http://titancuttingtools.com)

**Order today, we'll ship today!**

From basic orders to technical challenges, our dedicated customer service professionals and technical advisors are here to help you find the best tools for even the most challenging applications.

Our industry leading distribution center is setup to respond as though it were your own. Buy with confidence knowing that all orders are confirmed via email within 15 minutes. Our strategic layout enables us to quickly access our expansive in-stock inventory for same day processing and shipment.

It has been more than a decade since TITAN USA's commitment to uncompromising quality opened our enduring partnership with PLATIT® to bring PVD tool coating services in-house.

In the years since that first load of tools came out of our first high production PL1001 PVD coating machine, we have expanded the facility to over 16,000 square feet and added another five matching PLATIT PL1001 vessels.

Our massive **SIX-vessel** in-house coating center provides TITAN USA and our customers with uninterrupted production of the industry's highest quality PVD coatings. This allows us to maintain a robust level of inventory available to all our customers throughout North America.

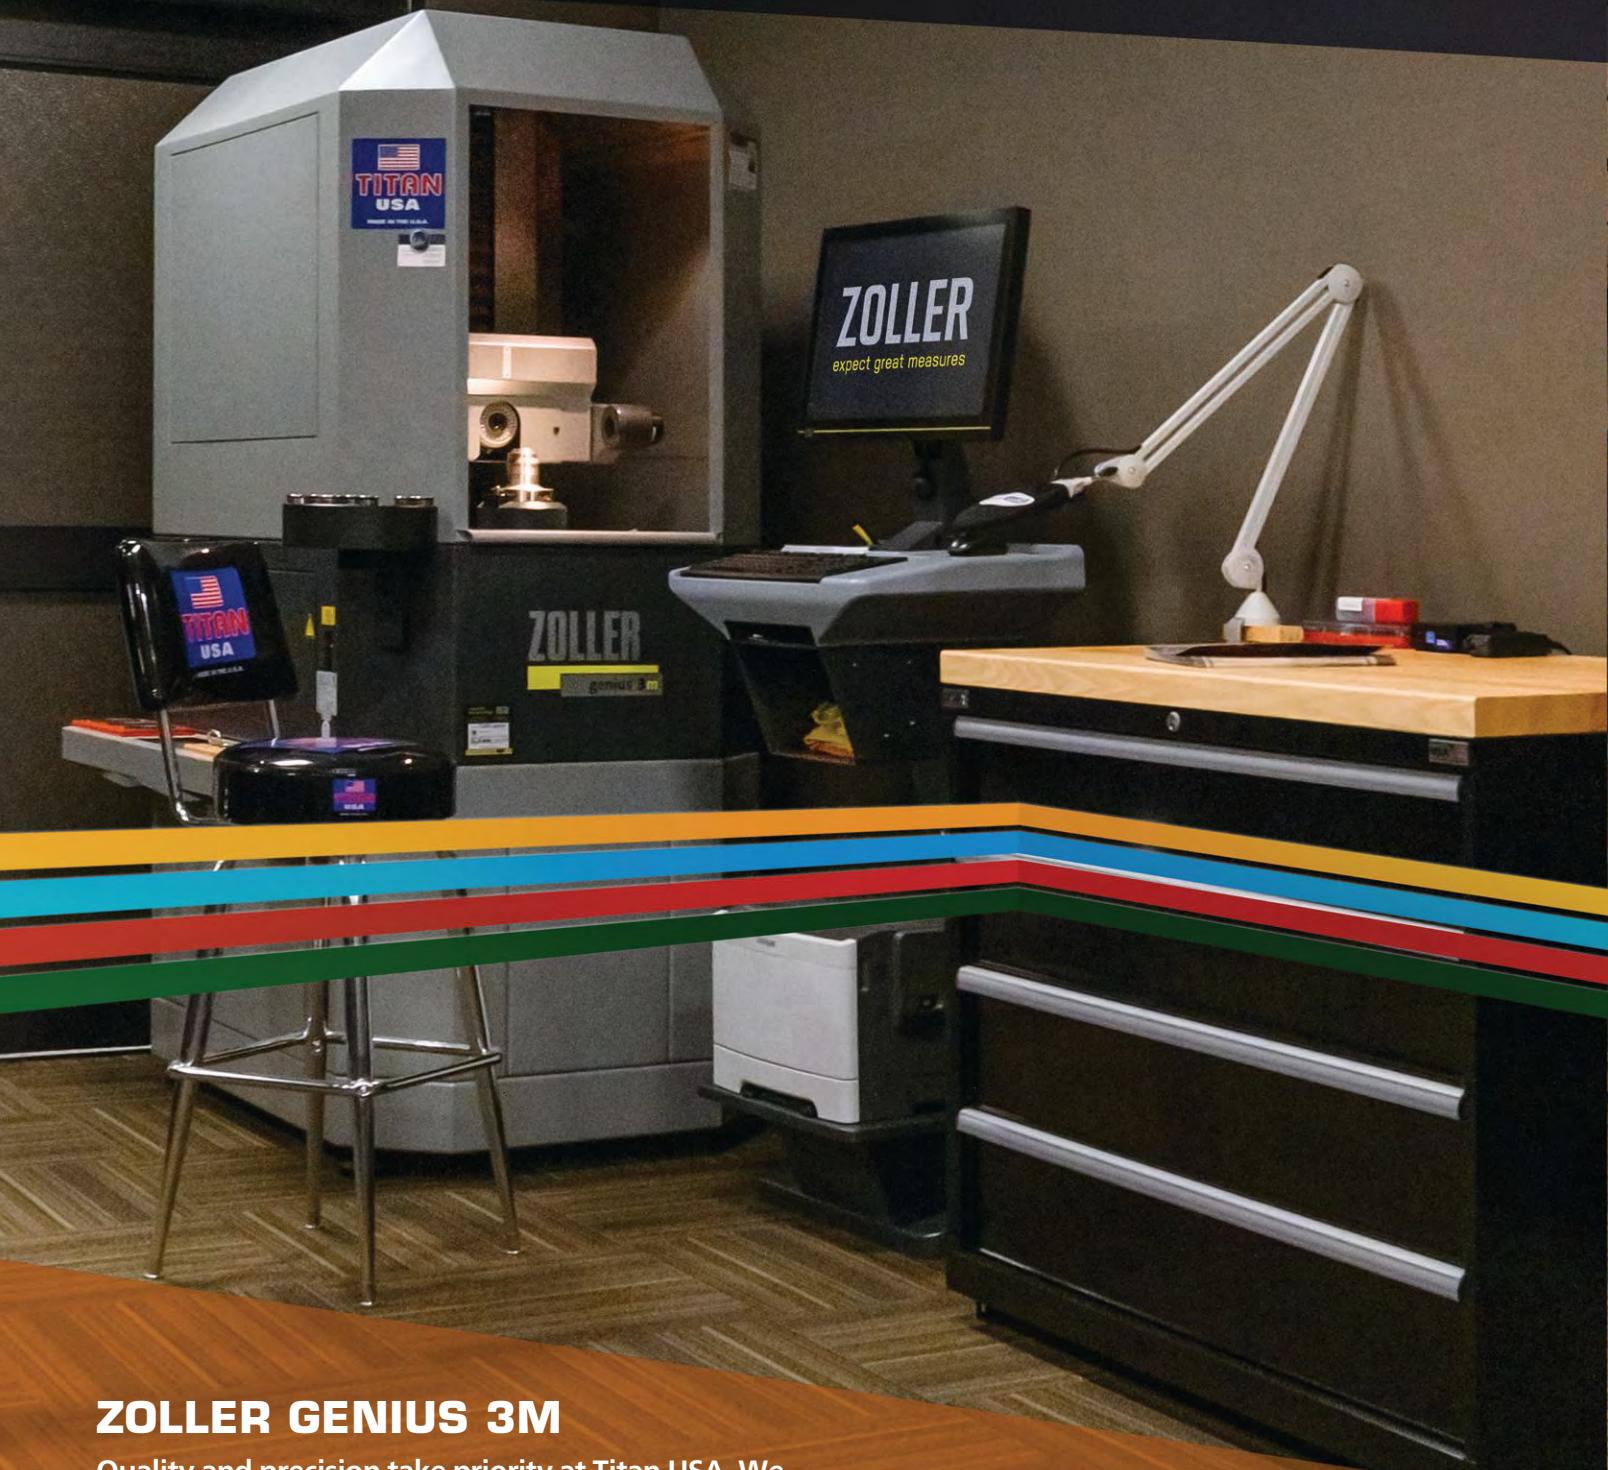

TWO advanced robotic EUROCOLD Pluritank® cleaning systems, removes oils and contaminants from tools prior to coating.

With PLATIT's easy loading carousel tool holders, different tool types of similar diameters can be mixed and coated in one load maximizing cycle times.

## ZOLLER GENIUS 3M

Quality and precision take priority at Titan USA. We have the latest inspection technology to ensure our tools meet or exceed industry standards. Our Zoller Genius 3m provides the most accurate testing from individual dimensions to complete fully automatic inspection of all tool geometries.

Tool performance comes down to the finest of details. Our Alicona EdgeMasterX allows for accurate 3D measurements of the cutting edge as well as surface finish and coating smoothness. Our customers will get only the highest quality tools and coatings. With the EdgeMasterX we can be certain of this.

## ZOLLER POM BASIC

Quick inspection is necessary in this fast paced industry. Our Zoller PomBasic allows for quick, simple and extremely precise measurement results. Getting product from production to inventory is key to keep our inventory levels high. The PomBasic allows just that while ensuring the tools are inspected correctly.

# PVD Coatings

*Multi Layer ~ Physical Vapor Deposition*

Increases cutting tool performance in terms of wear resistance, abrasion prevention, corrosion and oxidation at high temperatures.

**AlCrO-MAX**

AlCrO-MAX is a high performance Coating based on AlCrN with a titanium addition that has been engineered to give an optimum balance between the toughness of the core layer and abrasion resistance of the top nano-layer. Titanium's addition reduces the adhesive wear while increasing the micro-hardness up to 3500Hv. This coating has excellent thermal and chemical stability at temperatures up to 950°C and is recommended for a wide range of materials in high performance applications. AlCrO-MAX receives a post-polish treatment to smooth out the coating and maximize chip evacuation at high speeds and feeds. AlCrO-MAX is a true high performance coating that outperforms all generic coatings available.

**nACo**

nACo is a nanocomposite coating with extremely high nanohardness and heat resistance up to 1200°C – nACo coating is an enhanced AlTiN with the addition of Si<sub>3</sub>N<sub>4</sub> Silicon Nitride. This coating receives a post-polish treatment and excels in drilling and milling of ferrous hardened steels (54-60HRc) as well as drilling and milling standard ferrous steels at +25% feedrate over AlTiN.

**AlTiN**

AlTiN is a high performance coating for milling, drilling, and tapping. This coating works well in a wide range of materials and exotics including high temp alloys, stainless steels, alloy steels, cast iron, high temp nickel base alloys, titanium alloys, and inconel. AlTiN is extremely heat resistant and can be used with or without coolant. It is exceptional in difficult to machine materials where adhesive wear is particularly high.

**TiCN**

TiCN is a general purpose coating used for milling, drilling and tapping in all stainless steels, and a wide variety of other materials. This would be an option when AlTiN cannot be used, as in applications that can't generate the speeds and feeds required for higher cutting temperatures.

**ZrN**

ZrN is a high performance coating for milling non-ferrous materials such as aluminum, brass, and bronze applications. It prevents edge build up that is typical in soft and sticky materials. This coating allows for higher speed and feed rates as well as prolonged tool life. ZrN does not have an affinity for aluminum.

**TiN**

TiN is a general purpose coating for drilling and tapping in a wide variety of materials, and generally used in applications with lower cutting speeds.

# Titan Technology

## OTEC EDGE PREPARATION

We have acquired FOUR Otec drag finish machines for doing edge preparation. This process accurately removes micro burs and rounds over the cut edge to a specific micron for a more stable cutting edge.

## R&D CENTER

Our in house VF2 SS HAAS machining center allows us to always be looking into the future. We can test and prove new cutting tool geometries along with new PVD coatings in all materials. Additionally, we can use this technology to train our staff on Milling, Drilling, Tapping, Reaming along with general machining techniques. We also are using this important resource to manufacture parts for our coating center and post polish departments.

## OTEC POST POLISHING

This process microscopically smoothes the finish of our advanced coatings allowing for cooler temps at higher speeds with better chip evacuation. The result is a longer lasting better cutting tool.

## CUSTOM TOOLING

Looking for something less common? Try our specials department. From minor alterations to completely unique tooling solutions – we'd love to hear about your project and help you to achieve it.

## HIGH PERFORMANCE SOLID CARBIDE END MILLS

**VI-PRO®**  
VARIABLE INDEX GEOMETRY

YOUR #1 SOURCE FOR AMERICAN-MADE PREMIUM QUALITY CUTTING TOOLS

**TITAN's VI-PRO® is a High Performance, carbide end mill, that incorporates the ultimate in variable index geometry. Our flute configuration produces a harmonics shift, resulting in minimal chatter and an exceptional finish.**

- Post polished AlCrO-MAX coating covers a wide range of materials
- Made in the USA from premium micrograin carbide
- Used in all slotting, roughing, profiling and finishing applications
- High Performance, chatter free machining provides versatility in use for all ferrous materials
- Designed for use in Alloy Steels, Inconel, Cast Iron, Titanium, Stainless Steel, High Temp and all other exotic materials up to 50HRc
- Enables higher SFM and heavier chip loads
- Eccentric Relief on the cutting edge provides enhanced edge strength
- Available in 4, 5 & 6 Flute - Stub, Regular, Long & Extra Long Lengths
- Available in Square End, Ball Nose and various Corner Radius sizes
- Recommended for slotting up to 1 x Diameter

### Outperform Under Budget with Corner Radius VI-PRO®

The sharp corner of an end mill is the weakest point on the tool. The corner radius design eliminates this vulnerability which reduces chipping and provides longer tool life. VI-PRO™ tools are available with corner radii starting at .010 all the way up to .250. Longer tool life means increased productivity which has real impact on your bottom line.

## 4 on-site Otec Post Polish and Edge Prep machines

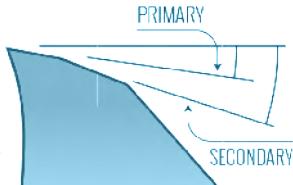

### Benefits of Post Polishing

AlCrO-MAX by nature of the coating process leaves tiny "droplets" of the coating on the surface of the tool. Proven results have shown that the removal of these droplets provide a smoother tool surface which results in a better cut. Perhaps the most important benefit, is that the tool is able to run at faster feed rates due to the smoothness of the flute area. This results in better chip evacuation and cooler temperatures resulting in longer tool life.

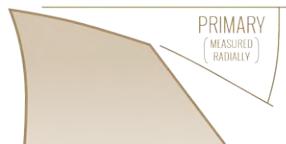

TITAN's High-Performance VI-PRO® carbide end mills utilize an Eccentric Relief on the cutting edge to provide enhanced edge strength and a smoother cutting action.

#### GENERAL PURPOSE STANDARD RELIEF

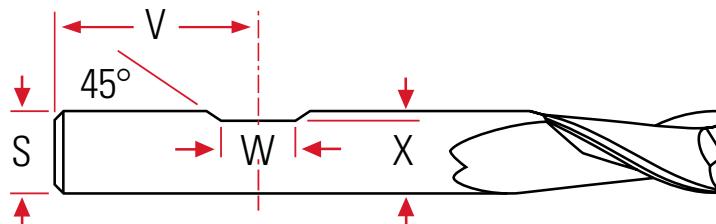

Most common relief for non-ferrous alloys. Includes a primary and secondary relief angle.

#### VI-PRO® ECCENTRIC RELIEF

A powerful edge design for ferrous and tough material cutting. This design includes a primary relief measured radially along its edge.

# HIGH PERFORMANCE SOLID CARBIDE END MILLS

**VI-PRO®**  
VARIABLE INDEX GEOMETRY

YOUR #1 SOURCE FOR AMERICAN-MADE PREMIUM QUALITY CUTTING TOOLS

High Efficiency Milling and High Speed Machining are machining techniques aimed at maximizing metal removal rates (MRR) with the use of technology advancements in machines, software and end mill geometries. Both methods have the simple principle of increasing the metal removal rates (MRR).

## HIGH SPEED MACHINING • HSM

High Speed Machining is based on a very light axial depth of cut, while allowing for maximum radial engagement of the end mill. This combination, along with very high spindle speed, allows for an extremely high feed rate and greatly increased metal removal rates (MRR). HSM can be used in a wide range of applications and has many benefits.

- Used in applications ranging from simple slotting to complex 5 axis contouring
- Final result is achieved with quick light cuts, which allows for an extremely smooth finish in a roughing application
- Flexibility to use higher flute counts to achieve the best finish with the least production time

High Speed Machining is a high demand application where the VI Pro End Mill and Alcro-Max coating excel to give the absolute best results in High Performance applications.

## HIGH EFFICIENCY MILLING • HEM

High Efficiency Milling is based on radial chip thinning with the basic idea of keeping the end mill cutting at an ideal chip load. The stepover is substantially reduced from the typical 50% of tool diameter, while the feed rate is greatly increased to maintain the correct chip load. There are multiple benefits to the process in the correct applications.

- Reduced spindle load due to low percentage of tool diameter being engaged in the work material.
- Allows for increased axial depth of cuts using the entire LOC on extra length end mills allowing for even tool wear and increased tool life.
- HEM tool paths allow for high flute count tools with heavier core, such as our 6 flute VI Pro, to be used which also means increased tool life as well as better finish on parts.

Today's advancements in CAM software technology have paved the way for HEM to be incorporated in many applications. In combination with a High Performance VI Pro 6 flute End Mill High Efficiency Machining can increase metal removal rates by 50% or more versus conventional roughing applications, all while extending tool life and machine life together.

These 2 flute end mills are designed specifically for high speed machining in Aluminum. This tool will plunge, slot and profile in all non-ferrous materials. Our ZrN coating allows for higher speed rates and prolonged tool life and does not have an affinity for Aluminum.

WORKS WELL IN ALL NON-FERROUS MATERIALS APPLICATIONS

For coating information see page 8. For technical information, please see pages 86-87, 91-93.

**High material removal rate (MRR) with excellent surface finish**

The radius chipbreakers in this high performance tool allow for higher feed rates than a finishing end mill yet does not appreciably degrade the finish that the tool produces.

**WORKS WELL IN HARD TO MACHINE MATERIALS SUCH AS STAINLESS STEEL AND TITANIUM.**

## END MILL GEOMETRY

YOUR #1 SOURCE FOR AMERICAN-MADE PREMIUM QUALITY CUTTING TOOLS

Core Diameter: The diameter measured tangent from bottom of all flutes. This diameter dictates the strength of your end mill.

Cutting Diameter: Measured from margin-to-margin on cutting end of tool. An even number of flutes can be measured 180° apart.

Dish Angle: Angle perpendicular to centerline of tool and allows proper end cut characteristics and reduces full diameter contact.

Flute Wash: Amount of non-cutting flute area past the length of cut.

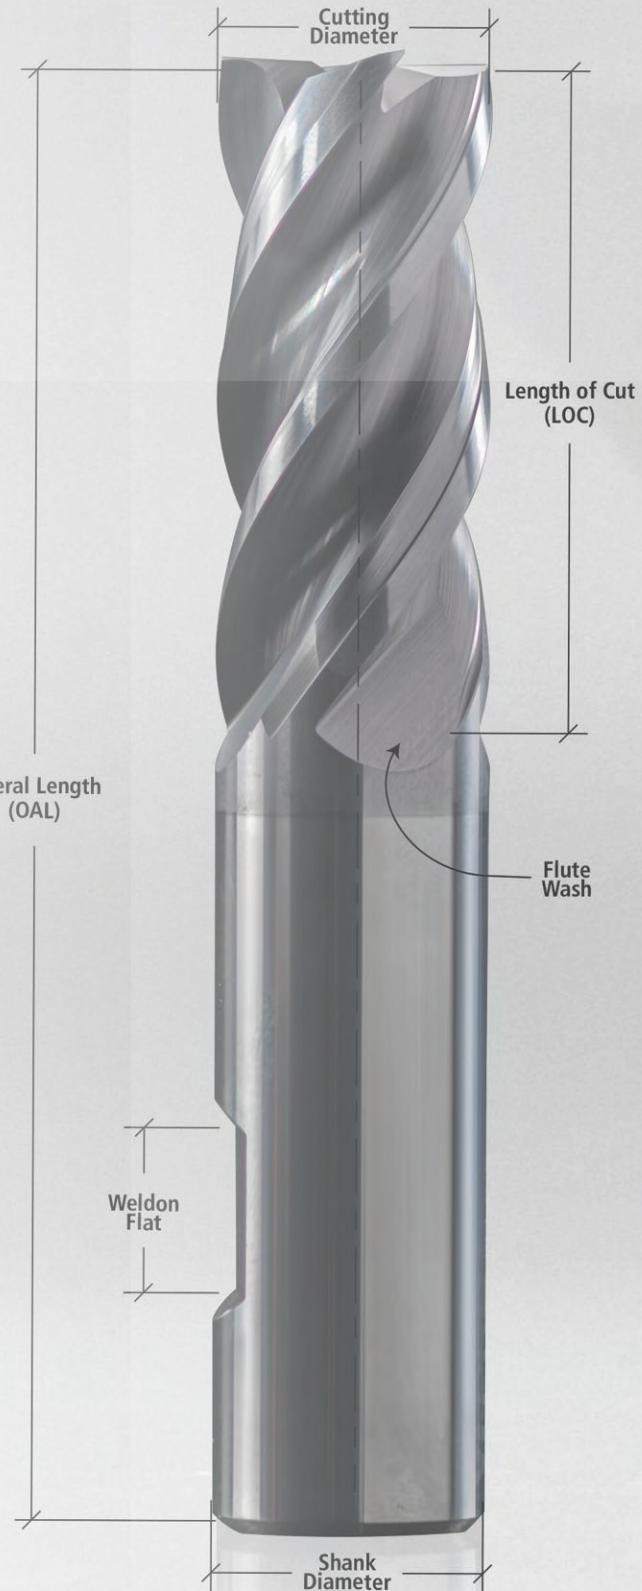

Gash Angle: The secondary cuts on a tool to provide chip space at corners and ends. The space forming the end cutting edge, which is used when feeding axially.

Helix Angle: This is the angle formed by a line tangent to the angle of the flute grind and parallel to the centerline of the tool.

Land: The narrow surface of a profile sharpened cutter tooth immediately behind the cutting edge.

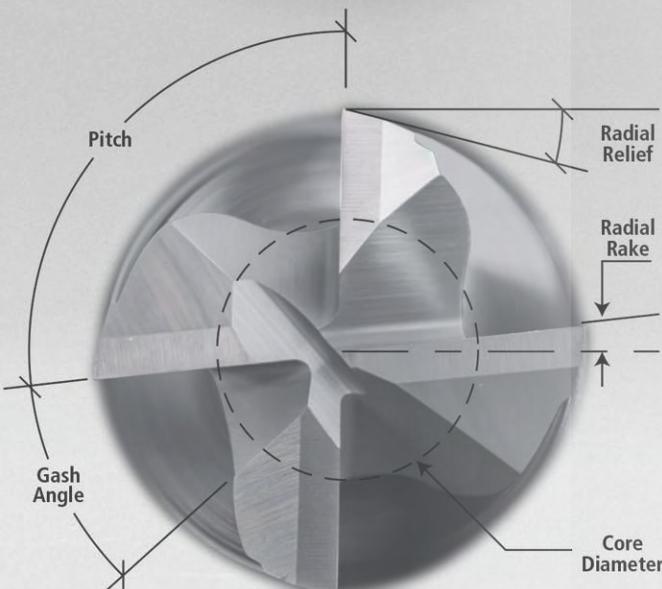

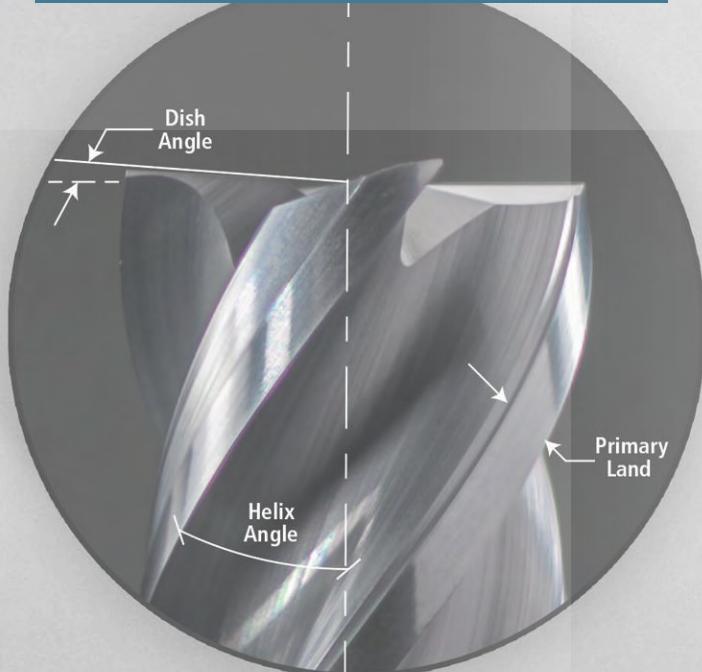

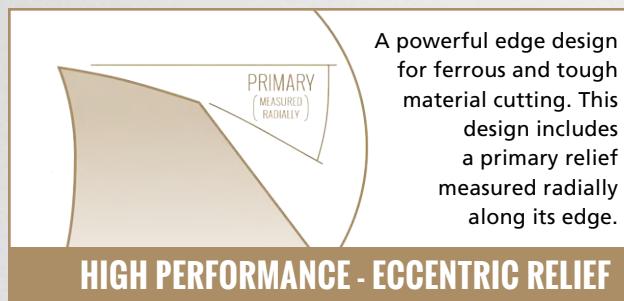

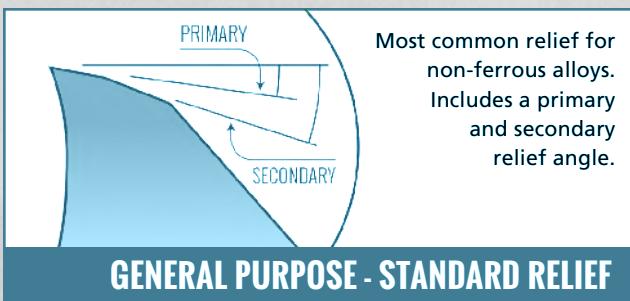

Length of Cut (LOC): This is the actual cutting depth of the tool in the axial direction.

Overall Length (OAL): A measurement taken from end-to-end of the tool.

**Radial Relief:** Area where cutting face is relieved behind the cutting edge in order to avoid rubbing while maintaining maximum edge strength. We offer 2 types of Radial Relief:

1. **Standard Relief** - General purpose relief shape consisting of a primary and secondary grind behind the cutting edge.
2. **Eccentric Relief** - A strong high performance edge design for ferrous and tough material cutting consisting of a primary relief measured radially along its edge.

**Pitch:** This is an equal angular measurement from flute-to-flute. If the tool is a variable index style then this spacing is unequal.

**Radial Rake:** The angle of the rake face measured from center of the tool.

**Shank Diameter:** The end of the tool that is held in the holder and requires a high degree of accuracy and concentricity.

**Weldon Flat:** The flat on the shank provides positive driving surface for the end mill.

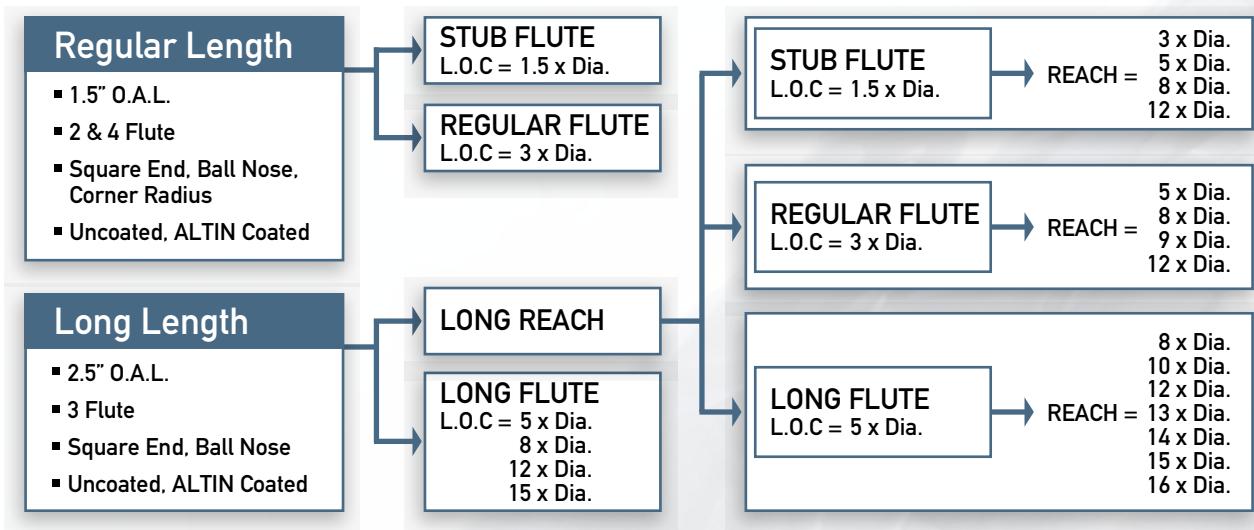

# GENERAL PURPOSE SOLID CARBIDE MICRO END MILLS

YOUR #1 SOURCE FOR AMERICAN-MADE PREMIUM QUALITY CUTTING TOOLS

Our selection of Micro End Mills covers a wide range of profiles. Choose from 2, 3 and 4 Flute, Square, Ball, Corner Radius, and Stub, Regular, Long Flute lengths and Long Reaches. All micro tools stocked uncoated, and Altin coated for optimum tool performance. All tools are stocked and ready to ship. Order today, and we'll ship today!

Micro End Mills are stocked in sizes from 0.005" to 0.120" in the following:

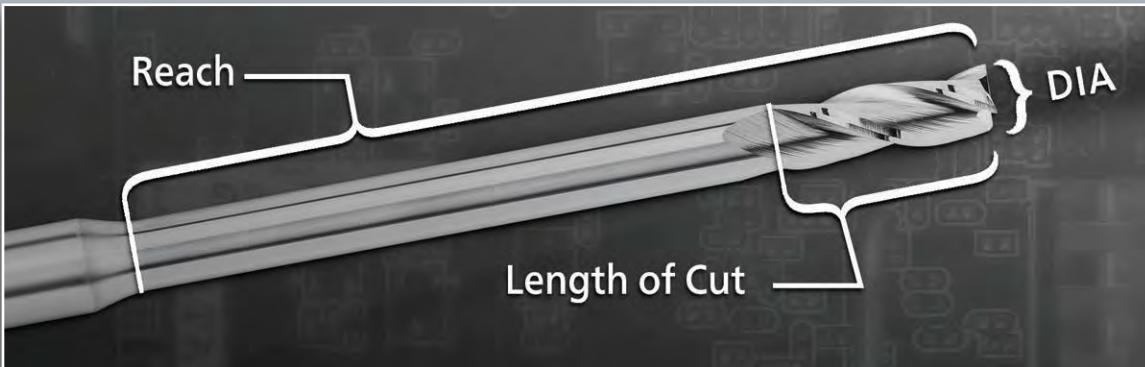

**TITAN USA offers the industry's highest quality, Made in the USA, Carbide Micro End Mills**

# GENERAL PURPOSE SOLID CARBIDE THREAD MILLS

YOUR #1 SOURCE FOR AMERICAN-MADE PREMIUM QUALITY CUTTING TOOLS

When producing a range of threads across materials on the same machine, thread mills have a distinct advantage over traditional taps. A single thread mill can produce internal or external threads in a left or right-hand direction, and with single or multiple leads. The same thread mill will work in a full range of materials from soft non-ferrous materials all the way through tough alloys where taps are more prone to breaking. Thread mills also have an advantage when threading pipes since there is no stop line or leftover chips as there would be with traditional tapping.

## How it Works

Unlike taps that feed into the part at the rate of the lead thread and use the first chamfer to cut the threads to finished size - thread mills cut all threads at the same time in a single motion. To do this, the thread mill is lowered into a hole to the desired depth and moved to the side wall, then using helical interpolation it moves around the outer wall of the hole and up one thread height until it returns to the first position. From there it returns to center and is removed from the hole.

## AlTiN Coated for Better Performance

Our solid carbide thread mills are coated in AlTiN for lasting reliable performance in a wide variety of materials. For a complete speed and feed information, please refer to the technical information at the end of this section.

## WHERE TO USE THREAD FORMING TAPS

Materials particularly well suited for thread forming include aluminum, brass, copper, lead, stainless steel, carbon steel, cast steel, leaded steel and zinc. In general, any material which produces a stringy chip is a good candidate for cold forming threads. If the chips are powdery, the material may be too brittle. Forming taps generate threads without producing chips. The threads produced are much stronger than those created by cut taps because of the displacements of the grain of the metal in the workpiece. Cutting taps produce chips which may interfere with the tapping process.

## MAJOR ADVANTAGES TO THREAD FORMING

- Chipless Tapping – no chip removal problems in blind holes.
- Stronger Threads – the grain flow of formed threads follows the contour of the thread in steel and stainless steel, resulting in greater thread strength.
- Better Thread Gaging – forming taps create their own lead therefore the possibility of producing oversized threads is greatly reduced.
- Stronger Taps – the absence for the need for flutes results in a stronger more solid tap.
- Longer Tap Life – forming taps last 3 to 20 times longer because they have no cutting edge to dull.
- More Efficient Production – longer tap life, less tap breakage and faster tapping speeds (up to 2X faster than cutting taps).
- Ideal for Non-Lead Screw Tappers – the ability to form their own lead makes forming taps well suited for NC machines or other machines without lead screws.

## CALCULATING TAP DRILL SIZES - THREAD FORMING TAPS

DRILL SIZE = MAJOR DIAMETER - [(0.0068 X desired % of thread) ÷ Threads Per Inch]

DRILL SIZE (mm) = MAJOR DIAMETER - [(0.0068 X desired % of thread x Pitch (mm))]

## GUIDELINES FOR USING THREAD FORMING TAPS

**PRE-TAP HOLE SIZE** - Thread Forming taps require a larger pre-tap hole size than a cutting tap. Tapping with too small of a pre-tap hole size results in excessive tap wear, torque and possible tap breakage.

**LUBRICATION** - Thread Forming Taps require good lubrication. Cutting oils are generally preferred because of their lubricity compared to water soluble coolants.

- AlTiN coating for use in high temperature drilling applications
- Coating allows for increased machining speeds from 50% up to 200%
- Used in drilling Stainless Steels, Nickel-based and Titanium alloys
- Not recommended for Aluminum

All cobalt drills have identification ring on shank.

For coating information see page 8. For technical information, please see pages 210 - 211.

OVER 1/2 TO 1	+1/4 TO -.1/8
OVER 1 TO 2	+1/4 TO -.1/4
OVER 2 TO 3-1/2	+3/8 TO -.3/8

### INCLUDED POINT ANGLE

SIZE (INCLUSIVE)	INCLUDED ANGLE	TOLERANCE
1/16 TO 1/2	118°	±5°
OVER 1/2 TO 1-1/2	118°	±3°
OVER 1-1/2 TO 3-1/2	118°	±2°

### LIP HEIGHT

SIZE (INCLUSIVE)	TIV (TOTAL INDICATOR VARIATION)
1/16 TO 1/8	.0020
OVER 1/8 TO 1/4	.0030
OVER 1/4 TO 1/2	.0040
OVER 1/2 TO 1	.0050
OVER 1 TO 3-1/2	.0060

NOTE: 95% of drills in any one lot to fall within tolerances above.

#### SUGGESTED METHOD OF MEASUREMENT:

1. Rotate the drill in a vee block against a back end stop.
2. Measure the cutting lip height variation on a comparator, or with an indicator set at allocation approximately 75% of the distance from the center to the periphery of the drill.

### CENTRALITY OF WEB

SIZE (INCLUSIVE)	TIV (TOTAL INDICATOR VARIATION)
1/16 TO 1/8	.0030
OVER 1/8 TO 1/4	.0040
OVER 1/4 TO 1/2	.0050
OVER 1/2 TO 1	.0070
OVER 1 TO 3-1/2	.0100

NOTE: 95% of drills in any one lot to fall within tolerances above.

#### SUGGESTED METHOD OF MEASUREMENT:

1. Rotate the drill in a close fitting bushing.
2. Record the difference in indicator readings of the web at the point as the drill is indexed 180°.

### FLUTE SPACING

SIZE (INCLUSIVE)	TOLERANCE (TIV)	ACTUAL DEVIATION
1/16 TO 1/8	.0030	.0015
OVER 1/8 TO 1/4	.0060	.0030
OVER 1/4 TO 1/2	.0100	.0050
OVER 1/2 TO 1	.0140	.0070
OVER 1 TO 3-1/2	.0260	.0130

NOTE: 95% of drills in any one lot to fall within tolerances above.

#### SUGGESTED METHOD OF MEASUREMENT:

1. Place the drill in a vee block against a back end stop, and rotate it against a radial finger stop.
2. Take an indicator reading at the leading edge of the margin on the opposite flute.
3. Repeat for the other flute and note the difference between the two readings.
4. The deviation in flute spacing is equal to one-half the difference between the two readings.

# DEBURRING TECHNICAL INFORMATION

YOUR #1 SOURCE FOR AMERICAN-MADE PREMIUM QUALITY CUTTING TOOLS

## SELECTION BY CUT

### SINGLE CUT:

Provides the best surface finish and largest contact patch on the work piece.

Demands greater operator skill since the single flute direction pulls the bur into the work piece.

*USE IN - Non-hardened steel <45 HRC, Hardened Steel >45HRC, stainless steel, non-ferrous light metals, hardened cast iron >45HRC, High temp resistant metals*

### DOUBLE CUT:

Most popular geometry as the dual flute direction reduces the contact patch on the work piece and therefore provides easier operator control while still maintaining a good surface finish.

*USE IN - Ferrous metals, Non-ferrous metals*

### ALUMINUM CUT:

These burs employ a coarser flute which results in improved cutting performance for aluminum and aluminum alloys.

*USE IN - Non-ferrous metals, aluminum alloys, plastics*

## CARBIDE BURS - SPEEDS

CUTTING DIA.	SUGGESTED RPM	MAXIMUM RPM
1/16	55,000 – 85,000	90,000
1/8	35,000 – 65,000	80,000
3/16	30,000 – 55,000	70,000
1/4	25,000 – 50,000	70,000
5/16	20,000 – 40,000	67,000
3/8	18,000 – 40,000	63,000
7/16	16,000 – 38,000	58,000
1/2	14,000 – 36,000	50,000
5/8	12,000 – 25,000	40,000
3/4	10,000 – 20,000	33,000
1	7,500 – 20,000	25,000

**When using double cut:** Reduce speeds by 25% approximately  
**For stainless steel material:** Increase speeds by 50% approximately.

Work piece hardness and machinability must be considered when setting machine speed. The feed rate plays an important part in the life expectancy of a tool and the hole finish which one is looking to attain. Improper feed rate can cause excessive tool wear as well as an inadequate hole finish.

To eliminate chatter, slow cutting speed and increase feed appropriately. Stock removal on roughing operations should not exceed 2 to 4 percent of tool diameter in most cases. Stock removal recommendations on finishing operations are .002 to .004.

For best results with brass, cast iron and some plastics, use a Left-Hand Spiral-Fluted reamer with negative shear action. This type of reamer helps prevent chips from working back into the flutes and scoring the hole. In all reaming operations, use constant-flow coolants. Soluable oil is effective for most metals; however, sulphur-based oils are recommended for stainless and certain alloy steels. Lard oil and kerosene improve the finish on aluminum.
