The above toolholders have 1.5° helix angle. For other helix angles see page 33.
 Toolholders with prefix "CN" cannot be used with an anvil.
 The above Toolholders have coolant channel as standard.

Carbide Shank toolholders should be used when extra accuracy is required or when the bar length to bar diameter ratio exceeds 3:1.

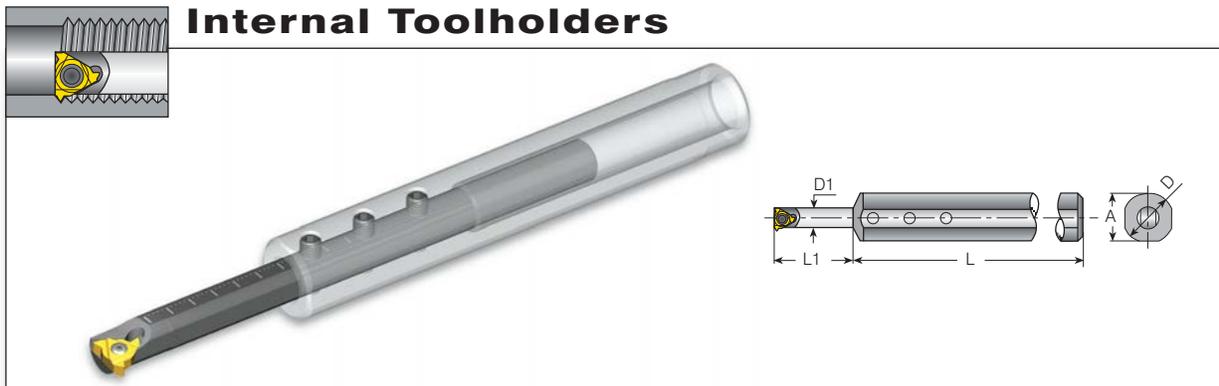

The overhang to bar diameter ratio should be as small as possible to eliminate the chance of chatter (vibration). The minimum length inside a holding device should be 3 times the diameter of the bar shank.

Calculating the Helix Angle and Choosing The Right Anvil

Flank Clearance Angle α

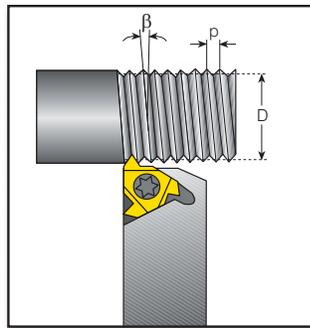

Vardex toolholders are designed to tilt the insert when seated in the toolholder (10° for external, 15° for internal tooling). This results in the differing flank clearance angles, based on the geometry of insert. To ensure that the side of the insert cutting edge will not rub on the workpiece, it is most important that the insert helix angle be correct - especially in profiles with small enclosed flank angles. This correction is provided by Vardex anvils.

$$\alpha = \arctan(\tan \frac{\phi}{2} \times \tan \delta)$$

Where: α - Flank clearance angle
 δ - Tilt angle
 ϕ - Enclosed flank angle

Calculating the Helix Angle β

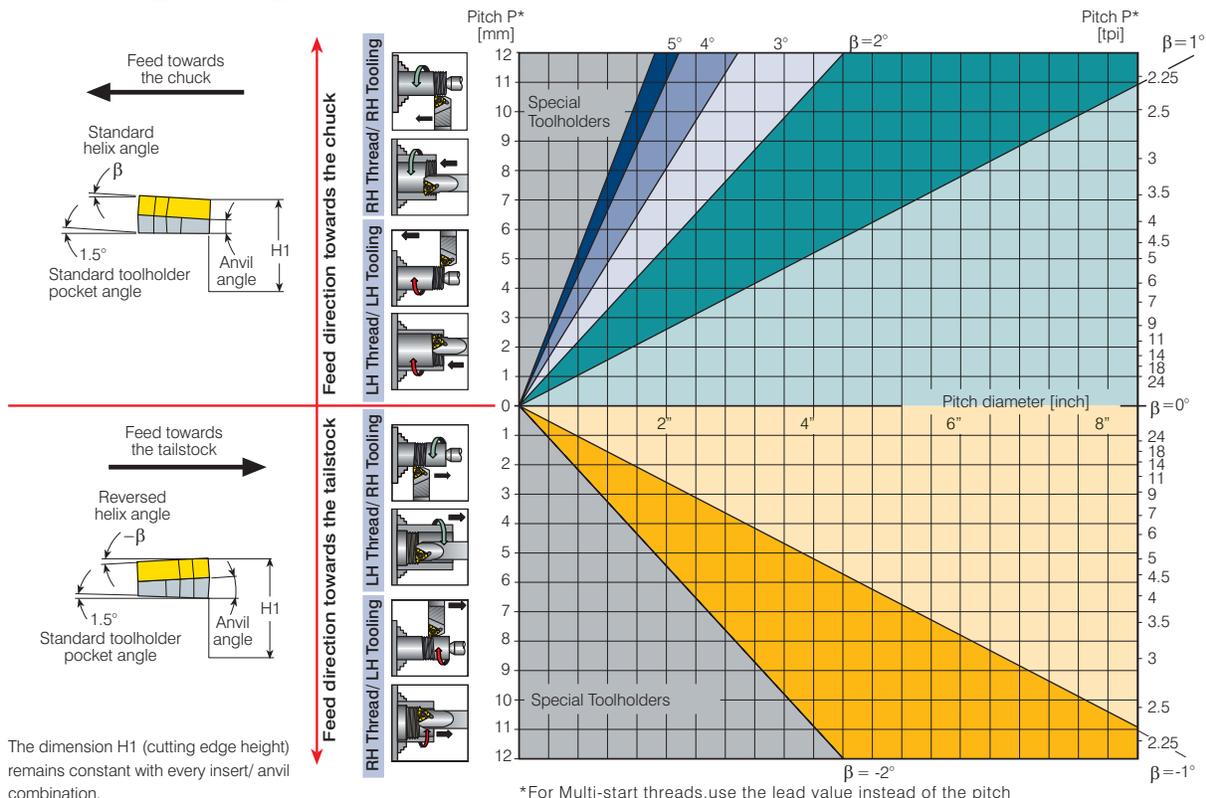

The helix angle is calculated by the following formula:

$$\beta = \arctan \frac{P \times N}{\pi \times D}$$

β - Helix angle [°]
 P - Pitch [inch]
 N - No. of starts
 D - Pitch diameter [inch]
 Lead = P x N

The helix angle can also be found from the diagram below.

Helix Angle Diagram

The dimension H1 (cutting edge height) remains constant with every insert/ anvil combination.

To ensure that you always have on hand an assortment of anvils for any job, we recommend that anvil kits be readily available.

Grades and their Applications

Grade	Application	Sample
VTX	A tough sub-micron substrate with TiAlN coating. For general use. Provides good fracture toughness and excellent wear resistance.	
VCB	Vardex Sintered chipbreaker for general use. The combination of sintered chipbreaker with ground profile provides excellent chip control and high quality of thread. TiAlN coating.	
VM7	Premium grade for stainless steel. Extra tough coating. Special multi-layer PVD coating guaranteeing higher resistance to wear in Stainless Steel applications.	
VKX	High hardness substrate for steels, stainless steel, non ferrous & aluminum. Recommended for rigid machine conditions. TiN coating.
