## Quick-Change Discs

The KLINGSPOR Quick-Change Disc line encompasses the major connection methods and KLINGSPOR's own QDC system. Quick-change discs are becoming more common-place in many manufacturing environments.

## QDC - Quick Disc Connect

The KLINGSPOR QDC abrasive system is an exciting approach to disc sanding. QDC's are disposable discs with a firm, built-in plastic backing pad. QDC's are quickly and firmly mounted on a special mandrel with a simple one-quarter turn. Advantages include resistance to grinding heat, low vibration, less tool down time, and long disc life.

All of KLINGSPOR's Quick-Change Discs whether they be the QDC style, the QRC (Quick Roll Connect) style, or the QMC (Quick Metal Connect) style are available in diameters  $\frac{3}{4}$ ", 1", 1-1/2", 2", 3", and 4" and in the following material types:

- Aluminum Oxide
- Alumina Zirconia
- Alumina Zirconia with Multibond Lubricant
- Ceramic Aluminum Oxide
- Ceramic Aluminum Oxide with Multibond Lubricant
- Non Woven materials
