## the spoken quality

AKKO Metalworking Tools, founded in 1986 continues its vision of “Spoken Quality” with indexable tools, tool holder systems and cutting insert solutions that make a difference in the competition of machining players in the global arena.

AKKO Makina Sanayi ve Ticaret A.Ş., an experienced machining specialist, produces Turning Tools, Threading and Grooving Tools, Antivibration Tools, Drilling and Holemaking Tools, Milling Tools, Monoblock Tools, Holders and Profile Inserts.

Every step of the manufacturing process, from raw material input to final product, occurs at AKKO’s integrated facility which is approximately 430,000 square feet equipped with expert production technologies. Furthermore, quality standards are continuously maintained as the processes that are decisive for product quality, including heat treatments and coating, are carried out under one roof. By continuously focusing on its R&D and innovation activities with precision, AKKO increases its global market share day by day without compromising on quality and service with developed innovative products.

AKKO, which produces 14,000 types of tool holders as standard with a production capacity of 750,000 pieces of tools and 400,000 special profile inserts per year, is an expert in developing fast solutions for special tool needs as well as standard tools with its wide stock range. With its experience, AKKO has expanded its presence in the global arena with AKKO Europe GmbH, which was established in Germany in 2018, and AKKO USA INC, in the United States in 2024. Today, AKKO’s solutions are shaping metal in 90 countries, including Europe, Asia, Africa, North and South American Countries and Australia.

Note: 3 types of cooling hose sets are designed that can be used in all external turning lathes. Before using the tools, care should be taken to ensure that the unused connections are closed with the screw in the set and that sealing is ensured. Cooling hose sets for lathe tools can be used in the pressure range of ACHS ... 10 bar to max 150 bar.

### 1 Assembly and Adjusting

The surface of the cartridge and the shank to be mounted, as well as the inner part of the toolholder should be cleaned. Check A and B in the image below.

### 2 Assembly for the Shank

The clamping length should not be less than 4 L/D ratio. Suggest using the clamping cover with opening method and other holding clamping methods. (Type C). Do not use screw clamping method. Use inner cooling please when working a long time.

### 3 Adjusting the Height of Centre Assembly

When mounting the body for the first time, a special calibration tool should be used for the center height. First mount the shank on the holder, then calibrate it within 0.01 tolerance on the X axis direction. Please make the adjustment with the dial indicator device.

### 4 Assembly the Right Cartridge

See the figure on the side:

### Choosing the Correct Insert

Choosing the correct insert can have a big influence on the overall success of vibration damping. The main way the insert can improve the machining stability is by minimizing the cutting forces. Following the guidelines below should be your first step to eliminate vibrations: If possible, use it always short drilling tools. Otherwise, reduce your speeds to minimize vibration.

**A** Choose an entry angle that is as close as possible to 90° to reduce the radial forces to a minimum.

**B** Choose the smallest insert head angle possible. This will reduce overall cutting forces and increase the clearance.

**C** Choose a small nose radius to reduce the cutting forces and to enable machining in a lower depth of cut.

**D** Machining depth ( $a_p$ ) should be larger than the nose radius.

**E** Use an insert with an overall positive geometry to reduce the cutting forces:

**F** Choose a positive top rake geometry:

**G** For-dampened-straight-adaptor:

## Thread Helix Angle

$$\tan \beta = \frac{P}{\pi \times D}$$

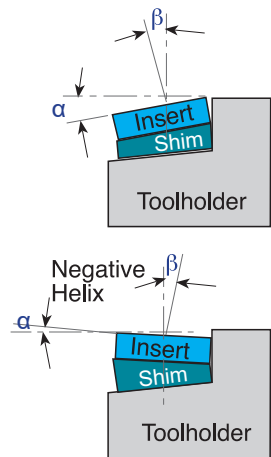

Simplified formula  
 $\beta = 20 P/D$   
 Example  
 $D = 25 \text{ mm (0.98")}$   
 $P = 1.5 \text{ mm (16 TPI)}$   
 $\beta = \frac{20 \times 1.5}{25} = 1.2^\circ$

## Standard and Slanted Shim

Akko Toolholders Pockets have a built in 1.5° helix angle. This angle may be adjusted to better match the thread helix angle by simply changing the shim.

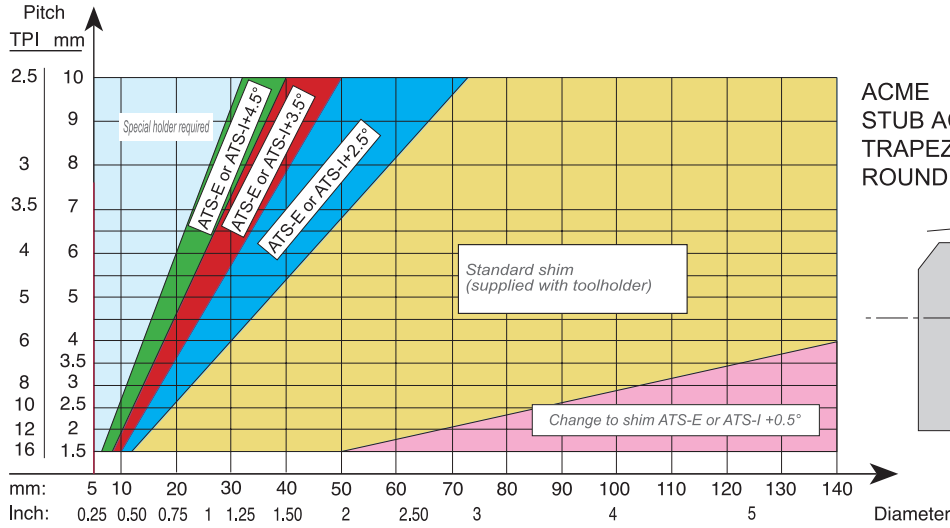

Negative helix is usually used when threading RH thread with LH Holder or LH thread with RH Holder.

## Shim Change Recommendation

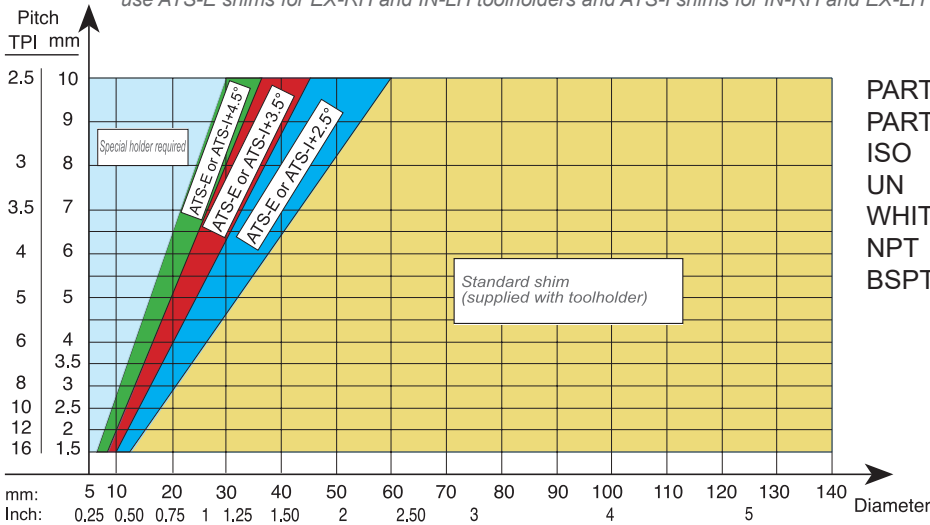

As can be seen from the chart, some Pitch to Diameter combinations require a shim change. If change is required, use ATS-E shim for EX-RH and IN-LH toolholders and ATS-I shims for IN-RH and EX-LH toolholders.

ACME  
STUB ACME  
TRAPEZ (DIN 103)  
ROUND (DIN 405)

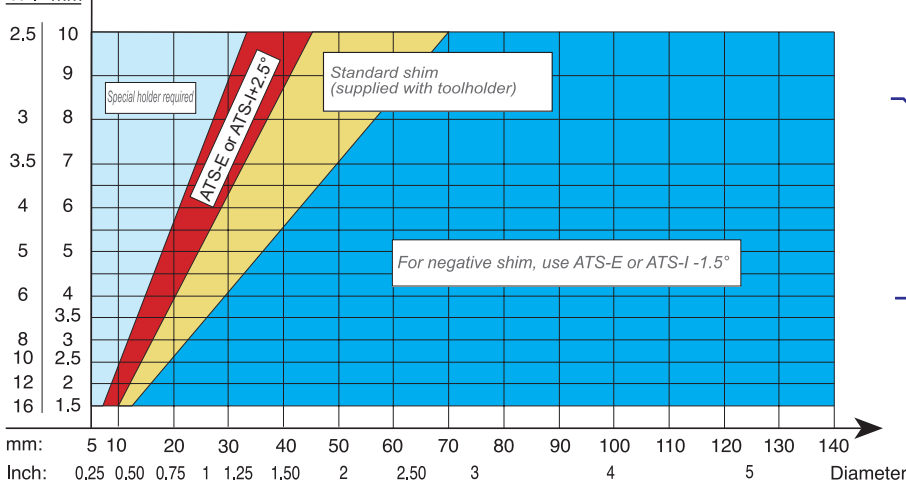

As can be seen from the chart, most applications do not require a shim change. If change is required, use ATS-E shims for EX-RH and IN-LH toolholders and ATS-I shims for IN-RH and EX-LH toolholders.

PARTIAL PROFILES 60°  
PARTIAL PROFILES 55°  
ISO  
UN  
WHIT.  
NPT  
BSPT

As can be seen from the chart, most applications require a shim change. In most cases a negative shim is required. use ATS-E shims for EX-RH and IN-LH toolholders. ATS-I shims for IN-RH and EX-LH toolholders.

AMERICAN  
BUTTRESS  
SAGENGWINDE  
(DIN 513)

Before Shim Change

Replacing the standard shim with a shim has negative angle, will eliminate side rubbing

After Shim Change

1. The -SR in the rough boring set codes indicates that two AKSR cartridges are installed, the -CR indicates that two AKCR cartridges are installed, -SC indicates that one AKSR and one AKCR cartridge are installed.
2. Radial setting of the cutting edges should be carried out with tool presetting equipment.
3. Boring bars fitted with two insert pockets are for roughing operations involving heavy chip removal. The double-insert boring bars include:
  - 3.1. Two AKSR cartridges on the same plane with two cutting edges set at identical radial distance for high feed rate roughing operations.(fig. A) Sets with -SR and -CR cartridges are for high feed operations.
  - 3.2. An AKCR cartridge and an AKSR cartridge not on the same plane for high-debth roughing operations. (fig. B) -SC cartridge sets are for heavy chip removal operations.
    - 3.2.1. With the rough boring operation, this allows double the cutting width, using only a single feed rate. (  $f=f1$  )
    - 3.2.2. With the finish boring operation, the cutting width is divided so that some of the intermediate machining can be omitted.
4. Boring bars fitted with a single cartridge are for roughing and finishing operations involving normal chip removal. The serrated surface protection plate AKPP should always be used. (fig. C)

**POLYGONAL SHANK**

POLYGONAL SHANK 3-4-5-6-8

**Compared to the steep taper the POLYGON SHANK has the following advantages:**

- Highly repeatable accuracy when clamping tools into spindle
- Fixed axial positioning with flat contact surface
- Suitable for high speed cutting
- No pull stud necessary
- Interface with a unique tapered polygon and flange face contact
- Exact positioning in the circumferential direction
- Highest runout accuracy, torque and rigidity
- Innovative modular tool system with highest precision
- Suitable for both turning and milling centres
- Incl. bore for data chip Ø 10 mm

**Material:**

- Special case-hardening steel for highly stressed parts
- Surface hardness: 58 ± 2 HRC
- Tensile strength in core min. 950 N/mm<sup>2</sup>
