

# WINNING COMBINATIONS

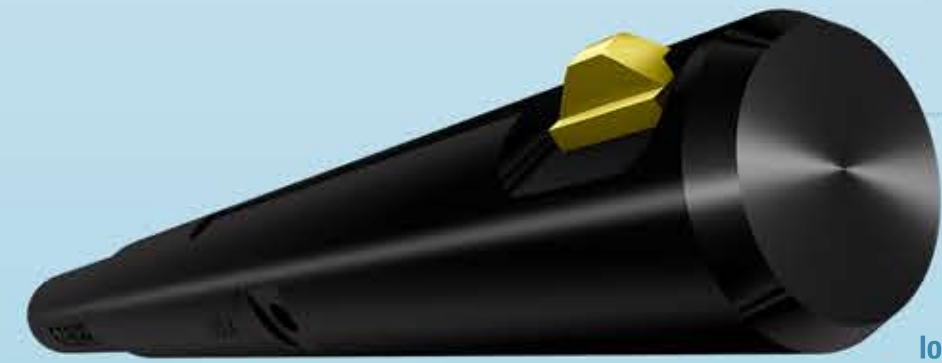

EASY. FAST. BUILT TO LAST.

## MICRO SERIES

E-Z Burr's Micro Tool Series deburrs the front and backside of holes as small as four one-hundredths of an inch. Designed for efficiency, our Micro Tool Series offers a unique two-piece construction consisting of a cartridge and blade. You can deburr thousands of tiny holes before replacing the cartridge. In addition, our Micro Tool Series allows you to remove and replace the cartridge in seconds while it's still in the machine.

*Sizes from .040" - .092" are in stock and ready for immediate shipment.*

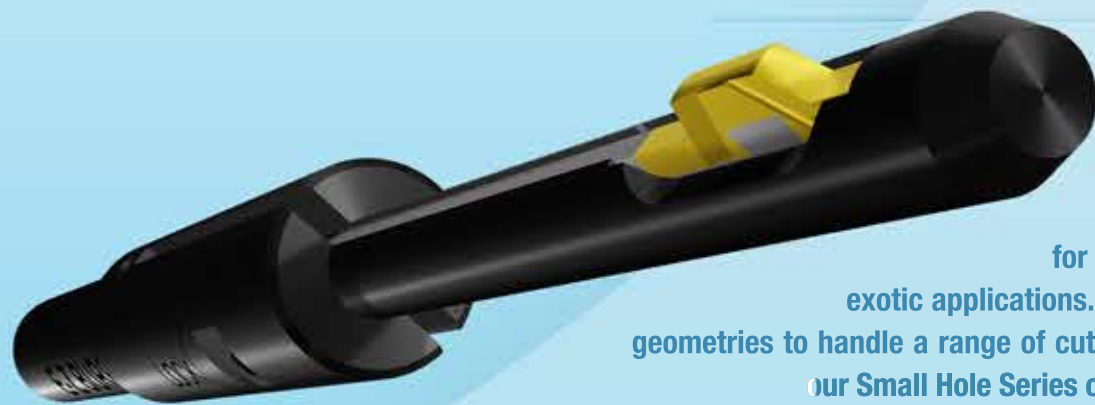

## CARBIDE SERIES

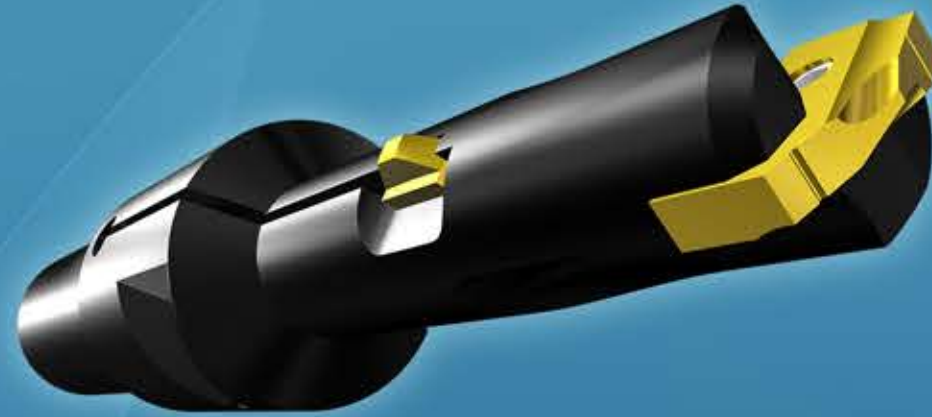

The E-Z Burr Carbide Series is ideal for large production runs, heavy burrs, and tough materials. The standard titanium nitride-coated carbide insert lasts more than 5x longer and runs 3x faster than HSS. In addition, the Carbide Series provides greater consistency over a larger number of parts, better finishes and improved component quality.

*Sizes from 0.25" to 2.0" are in stock and ready for immediate shipment. Larger sizes available upon request.*

## SMALL HOLE CARBIDE SERIES

Deburr hole diameters as small as .125 inches with E-Z Burr's Small Hole Carbide Tool. This deburring tool series was designed specifically for hard-to-machine materials, and exotic applications. Available in a variety of coatings and geometries to handle a range of cutting conditions from easy to difficult, our Small Hole Series can deburr even the toughest of holes.

## BURRFREE DRILL

Drill and deburr both the front and backside of the hole in one operation! The BurrFree Drill offers a wide variety of standard fractional & metric sizes for hole diameters .374" (9.5mm) and larger. Larger sizes available upon request

## CHAMFER TOOLS

Precision front hole chamfering and rear hole deburring with one tool in one pass! These specialty tools are made to order and will take up to 6 weeks to deliver.

## DRILL & CHAMFER TOOL

Now you can drill a hole, chamfer the front and deburr the backside in seconds! By combining 3 independent machining operations into a single tool... we offer you the perfect one-step solution!

## STUBBY SERIES

E-Z Burr's Stubby Series has quickly become the new industry standard for modern Swiss-style machines. As its name suggests, the Stubby is shorter in length, making it perfect to deburr holes in applications with limited space availability. Although the Stubby Series was initially designed and developed for "Live Tooling" it can be used on any application, and the Stubby Series is available with either High Speed Steel blades or Carbide inserts.

*HSS Sizes .093 (2.38mm) through .236 (6mm). Carbide Sizes from .125 (3.18mm) through .236 (6mm).*

## HSS SERIES

E-Z Burr's High Speed Steel (HSS) is designed for optimum performance. The flexible blade operates independent of springs and plungers. In addition, this tool allows you to replace cutting blades and adjust chamfer setting without removing it from the holder. Once the desired chamfer is set it won't change, even from blade to blade.

*Sizes from .093" through 2.00" are in stock and ready for immediate shipment. Larger sizes available upon request.*

## CUSTOM SERIES

If you need a unique deburring solution, E-Z Burr will customize any of our deburring tools to meet your specific needs. Regardless of the lengths, diameters, pilots, shanks, flats, tangs or whistle notches, E-Z Burr will work with you to create the exact deburring tool for your unique application or material. While we maintain a large inventory of standard tools for deburring holes from .040" (1.0mm) to 2.0" (50.8mm), we can produce special deburring and chamfering tools for any size hole.

*E-Z Burr stocks a wide variety of blanks for quick turnaround on special orders. Larger sizes available upon request.*
