NEW Self-Centering
 Geometry for
 Large Diameter
 Applications

- » Eliminates the need for piloting up to 8xD applications.
- » Excellent accuracy and phenomenal surface finish.
- » Improves cylindricity and straightness.
- » Unique rigid, quick change clamping system.

Quick Change Replaceable Tip Drills For High Productivity In Large Diameter Holemaking

SpadeTwist, the big brother to the GoldTwist line, is a drilling line for large diameter hole applications. It features an optimized cutting edge generating high productivity and excellent performance.

A new self-centering tip eliminates the need to pilot up to 8xD applications, as Ingersoll's indexable **SpadeTwist** product line introduces the addition of the LPC geometry. The LPC (self-centering) geometry allows for direct drilling of +5xD applications without the need for piloting resulting in improved productivity along with providing superior hole accuracy and surface finish.

Features & Benefits

- Unique, rigid, quick change clamping system: no need to remove the insert screw from the holder to change the head, which reduces tool setting time and machine downtime.
- Two-effective design generates higher productivity than a conventional, large diameter, indexable insert drill.
- Asymmetrical pocket design: provides error proof mounting, close tolerance, $+.002/-0.000$, and excellent surface finish.
- Also available in special L:Ds and combination drill/chamfer.

NEW Unique LPC self-centering geometry:

- » Excellent hole accuracy and superior surface finish.
- » Improved cylindricity and straightness.
- » .7874-1.374" (D20.0-D34.9 mm) diameter range.
- » Compatible with existing SpadeTwist bodies.
- » Tip indexing on machine reduces cycle times and lost spare parts.
- » Optimized for steel and cast iron applications.

Overview

Tip Geometries

Three application-specific geometries for one body.

LPC Self-Centering Tip **NEW**

The self-centering design enables +5xD drilling without a pre-hole, resulting in reduced cycle times and enhanced productivity.

Recommended Coolant Pressure and Volume

Drill Head Changing Instructions

To unclamp, rotate the screw 3-5 times counterclockwise.

No need to remove the clamp from the body.

NOTE: See below for recommended torque.

Clamping Guide

SpadeTwist Locking Screw Torque Chart

Diameter (mm)	Torque (lbf-inch)
20.0-21.9	40
22.0-23.9	40
24.0-25.9	40
26.0-27.9	44
28.0-29.9	48
30.0-31.9	53
32.0-34.9	53
35.0-37.9	53
38.0-41.0	62

For precise head clamping, press the tip down when tightening the screw - refer to the direction of the **blue arrow** (above).

NOTE: Replace clamping screws every 10 indexes.

Apply proper torque

Perform a torque check

Recommended Procedure for Using 8xD Holders if not using LPC self-centering geometry

◀ STEP 1

Pre-hole drilling.
» Diameter (D) x 0.5 depth for 8xD

◀ STEP 2

Approach the pre-hole at reduced speed and feed.

2-5 mm from the bottom of the hole

◀ STEP 3

Activate the cooling system.
» Dwell for 2-3 seconds

◀ STEP 4

After drilling, exit from hole at reduced speed and feed.
