DRV Magic Drill

High Efficiency Indexable Drill

Economical Inserts with 4 Cutting Edges and Excellent Chip Evacuation

2xD to 6xD drilling lineup with 4 chipbreakers for various machining applications

High speed and highly efficient machining with the combination of a CVD outer insert and PVD inner insert

Excellent hole accuracy with a highly rigid design for better chatter resistance

NEW Lineup Expansion with New Diameters and Inserts

Expanded Lineup from $\varnothing 0.500'' \sim \varnothing 2.000''$ and $\varnothing 12\text{mm} \sim \varnothing 60\text{mm}$

DRV Magic Drill

High Efficiency Indexable Drill

Economical Inserts with 4 Cutting Edges

Excellent Chip Evacuation with 6D Maximum Deep-Hole Drilling

High Speed and Highly Efficient Machining with the Combination of CVD (Outer Edge) and PVD (Inner Edge) Inserts

1 Excellent Drilling Precision with Less Variation in Cutting Diameter

Optimal Web Thickness and Low Cutting Force Design Reduces Chattering

Web Thickness Comparison
(Internal Evaluation)

Cutting Diameter Variation Comparison
(Internal Evaluation)

Cutting Conditions : Vc = 490 sfm, f = 0.0024 ipr
Cutting Dia. Ø0.812" (5D), Wet, Workpiece : 1049

Cutting Force Comparison
(Internal Evaluation)

Cutting Conditions : Vc = 660 sfm, f = 0.0047 ipr
Cutting Dia. Ø0.812" (3D), Wet, Workpiece : 1049

2 Unique Insert Design to Control Chip Flow

Outer Edge Insert

Unique Insert Pattern to Differentiate between Outside and Inside Inserts

Smooth Chip Evacuation with Compact Chips

Chip Shape Comparison of Outer Insert Cutting Edge
(Internal Evaluation)

Cutting Conditions : Vc = 490 sfm, f = 0.0024 ipr, Cutting Dia. Ø0.812 (3D), Wet Workpiece : 1049

Inner Edge Insert

Excellent Chip Evacuation with 6xD Maximum Deep-Hole Drilling

Weight per Unit of Length for Chips Generated by the Inner Insert
(Internal Evaluation)

Cutting Conditions : Vc = 820 sfm, f = 0.0031 ipr, Cutting Dia. Ø0.812 (5D), Wet, Workpiece : 304

3 New Insert Grades Developed for Drilling

High Speed and Highly Efficient Machining with the Combination of CVD (Outer Edge) and PVD (Inner Edge) Inserts

Recommended Cutting Conditions (Maximum Values)

Cutting Dia. \varnothing 0.812" (3D) Workpiece : 1049

See Page **29** for Insert Grade Selection Guide

Wear Resistance Comparison (Internal Evaluation)

Cutting Conditions : Vc = 660 sfm, f = 0.0047 ipr, Cutting Dia. \varnothing 0.812" (3D) , Wet Workpiece : 4140H

4 Economical 4-Edge Inserts 4 Types of Chipbreakers for Various Machining Applications

GM Chipbreaker - General Purpose

GH Chipbreaker - Tough Edge

SM Chipbreaker - For Stainless Steel Machining

Chip Control Comparison (Internal Evaluation)

Cutting Conditions : Vc = 330 sfm, f = 0.0039 ipr
Cutting Dia. \varnothing 0.812" (3D), Drilling Depth 2.436"
Wet, Workpiece : 304

Comparison of Remaining Chips (Internal Evaluation)

Cutting Conditions : Vc = 490 sfm, f = 0.0031 ipr
Cutting Dia. \varnothing 0.984" (5D), Drilling Depth 3.858"
Wet, Workpiece : 304

XM Chipbreaker - For Machining Soft Steel and SS Material

Chip Control Comparison (Internal Evaluation)

Cutting Conditions : Vc = 660 sfm, f = 0.0047 ipr
Cutting Dia. \varnothing 0.625" (3D), Drilling Depth 1.875"
Wet, Workpiece : A36

Chipbreaker Selection Chart **P6**

5 Available for a Wide Range of Machining Applications

Drilling and chamfering is both possible with the DRV chamfering attachment

→ See page 22~23 for more details

Expanded holder lineup:

Ø0.500" ~ Ø2.000" diameters

Ø12mm ~ Ø60mm diameters

Chamfering Attachment

Expanded large holder lineup from Ø0.500" ~ Ø2.000" and Ø40mm ~ Ø60mm diameters
(Pictured right : S40-DRV550M-3-17)

Wide lineup of toolholder from 2D to 6D

Drill Diameter Range

Case Studies

Housing - Structural Steel

Vc = 410 sfm (n = 1,660 rpm)
 f = 0.003 ipr (Vf = 5.236 ipm)
 Drilling Depth 1.772"
 Wet (External Coolant)
 S100-DRV0938-4-07
 SCMT070310GM-I PR1535
 SCMT070305GM-E PR1225

Cutting Time

DRV
 (Ø0.938" 4xD)

16 sec

**50%
 or More**
 Cutting Time

Competitor K
 (Ø0.938" 4xD)

35 sec

Chattering and recutting chips occurred in low rigidity workpiece of Competitor K. Speed was reduced to Vc = 200 sfm. DRV provided good chip control for stable machining at Vc = 410 sfm.

(User Evaluation)

Nipple - Stainless Steel

Vc = 760 sfm (n = 3,330 rpm)
 f = 0.005 ipr (Vf = 17.047 ipm)
 Drilling Depth 2.362" (4xD)
 1.181" (2xD)
 Wet (Internal Coolant)
 S100-DRV0875-4-06 (4xD)
 S100-DRV0875-2-06 (2xD)
 SCMT060210-GM-I PR1535
 SCMT060205-GM-E PR1225

Process 2
 Drilling Depth 1.181"
 (2xD)

Process 1
 Drilling Depth 2.362"
 (4xD)

Cutting Time

DRV
 (Ø0.875" 4xD/2xD)

12 sec

40%
 Cutting Time

Competitor L
 (Ø0.875" 4xD/2xD)

20 sec

Chattering and deflection occurred with Competitor L. DRV showed stable machining and a shorter cutting time even when the cutting conditions were increased by 1.6 times or more.

(User Evaluation)

Valve Body - Stainless Steel

Vc = 720 sfm (n = 3,200 rpm)
 f = 0.002 ipr (Vf = 6.300 ipm)
 Drilling Depth 1.969"
 (Blind hole / Through hole)
 Wet (Internal Coolant)
 S100-DRV0875-5-06
 SCMT060205-GM-E PR1225
 SCMT060210-GM-I PR1535

Cutting Time

DRV
 (Ø0.875" 5xD)

14 sec

**30%
 or More**
 Cutting Time

Competitor M
 (Ø0.875" 5xD)

22 sec

Competitor M : Chattering occurred in the continuous part and then vibration was bigger in the crossed-hole.

DRV : There was no chattering even when increasing cutting speed and there was low vibration in the crossed-hole. The DRV achieved 1.5 times machining efficiency.

(User Evaluation)

Piston - 4140

Vc = 820 sfm (n = 3,185 rpm)
 f = 0.0035 ipr (Vf = 11.417 ipm)
 Drilling Depth 2.756"
 (Blind Hole)
 Wet (Internal Coolant)
 S100-DRV1000-4-07
 SCMT070305-GM-E CA520D
 SCMT070310-GM-I PR1535

Cutting Time

DRV
 (Ø1.000" 4xD)

14 sec

25%
 Cutting Time

Competitor N
 (Ø1.000" 4xD)

19 sec

Competitor N : Loud chattering noise occurred.

DRV : Maintained stable machining. No chattering even at 1.5 times faster cutting speed.

(User Evaluation)

Recommended Cutting Conditions  P25~P28

Inserts are sold in 10 piece boxes

NEW

DRV Chamfering Attachment

Free-positioning according to the drilling depth
Versatile chamfering with reduced chattering

1 Double Inserts Provide Highly Efficient Machining

2 inserts allow for increased feed rates and a low cutting force design reduces chattering

2 Excellent Chip Evacuation

Chip flow grooves are designed to follow the flutes of the drill body delivering excellent chip evacuation

3 High Chattering Resistance

Molded chipbreaker on 2-edge chamfering insert reduces cutting force while the special insert design prevents fracturing on the edge

Unique Insert Design

Molded Chipbreaker

Unique insert with 2 cutting edges for chamfering attachment

Two Inserts

Clamping Screw for Chamfering Attachment

Chamfering Attachment for 2 Different Size Drills

Chattering Resistance Comparison (Internal Evaluation)

Provided good surface finish on the chamfer without chattering

DRV-CH20
(Cutting Dia. Ø20mm)

DRV-CH20
Smooth Surface Without Chattering

Competitor O
(Cutting Dia. Ø20mm)

Competitor O
Chattering Occurred on the Chamfer

○ : World Express (Shipping: 7-10 Business Days)

How to Install Chamfering Attachment

Instructions
1) Install the attachment over the DRV body so that "• • •" mark on the side of the attachment aligns with the inside flute edge (see image).
2) Adjust the position to avoid interference between the chamfering inserts, chamfering attachment ridges, and drill body flutes. Then fasten the clamp screw with the recommended torque below.

Recommended Torque

Chamfering Attachment Part Number	Torque (Nm)	Clamping Screw	Wrench
DRV-CH17 ~ DRV-CH26	10	HH6X18	LW-5
DRV-CH27	14	HH8X20	LW-6

• Internal Coolant is Recommended

Cutting Conditions by Application

Applications	Plain Surface	Angled Surface	Half Cylindrical	Hole Expansion	Existing Hole	Concave Surface	Stacked Plates
Workpiece Shape							
Cutting Speed Vc (sfm)	See recommended cutting conditions above	390 (PVD insert is recommended for outer edge)					Not Recommended
f (ipr)	See recommended cutting conditions above	50% of above recommendation				50% of above recommendation initially. See recommendations above once drill is fully engaged.	Not Available
Internal Coolant	Yes						Not Recommended

Insert Grade Selection Guide

Select CVD for the outer edge when performing high speed and high efficiency drilling and for abrasion resistance and long tool life.

Select PVD MEGACOAT for the outer edge for stable machining and a better surface finish.

PVD MEGACOAT is recommended for the outer edge if chattering occurs, machining with lathe, or if cutting conditions cannot be increased to the recommended speed for CVD.

1st Recommendation

(High Speed and High Efficiency Machining)

Outer Edge : CVD (CA520D / CA415D)

Inner Edge : PVD (PR1535)

Stable Machining Oriented

(1st Recommendation for Lathe Machining)

Outer Edge : PVD (PR1225)

Inner Edge : PVD (PR1535)

Shape of the Hole Bottom

Common for 2D, 3D, 4D, 5D, 6D Drills

*Above is estimated values. (varies within $\pm 0.004''$ ($\pm 0.1\text{mm}$) depending on workpiece material and cutting conditions)

Machining Caution

In case of through-hole machining, a disc may be generated and ejected outward when exiting the hole.

Be sure to install guards to protect against dangers if using a machine without the covers (including general-purpose lathes, etc.).

Adjustable Sleeve (Cutting Diameter & Center Height Adjustment)

Sleeve Dimensions (Use ASL for Inch Size Drills and SHE for Metric Size Drills)

Part Number	Stock	Unit	Dimension							Diameter Adjustment Range	Center Height Adjustment Range
			DCB	DCON	DF	LS	L2	L3	L4		
ASL 75100-175	●	inch	0.750	1.000	1.614	1.750	0.157	1.417	0.118	+0.016 ~ -0.008	+0.008 ~ -0.006

Ø0.750"	+0.008 ~ -0.006	Ø20	+0.2 ~ -0.15
Ø1.000"		Ø25	
Ø1.250"		Ø32	
-	-	Ø40	+0.3 ~ -0.2

How to Use the Adjustable Sleeve

1 Hole Diameter Adjustment when Drilling

1. Align the scale at the flange periphery of the sleeve to the center of the coolant plug of the drill. (Fig.1)
2. When making the hole diameter bigger, rotate the sleeve in the (+) direction and to make it smaller, rotate the sleeve in the (-) direction.
3. When rotating the sleeve, insert the wrench supplied with the drill into the hole on the flange periphery to rotate the sleeve.
4. Using the bottom screw of the side-lock arbor, firmly tighten the drill directly through the sleeve's window.
 - The upper screw should be tightened slightly so that the sleeve will not be damaged.

(Caution)

- Not for use with collet chuck type arbor.
- Check the actual cutting diameter after adjusting.

2 Center-Height Adjustment for Lathes

Most of the problems encountered with a turning lathe are center-height deviations.

The center height is appropriate if a core of about 0.5mm (0.020") diameter remains at the center of the hole.

Center-height adjustment is necessary when no core remains or if the core diameter is more than 1mm (0.039").

1. Align the drill with the outer insert face parallel to the X-axis of the tool turret. (Fig.4)
2. Align the scale (for the lathe) on the flange face of the sleeve to the center of the reference mark.
3. When no core remains, rotate the sleeve in the (+) direction to make the core larger, and when the core diameter is more than 1mm, rotate the sleeve in the (-) direction to make the core smaller.
4. When rotating the sleeve, insert the wrench supplied with the drill into the hole of the flange and then rotate the sleeve.
5. After Completing the adjustment, tighten the drill directly through the window on the sleeve.

(Caution)

Depending on amount of the center height adjustment, the hole diameter may change. It is recommended that the hole diameter is checked after the center height adjustment.

Lathe Installation

1. The top face of the outer insert should be parallel to the X-axis to allow for offset cutting.
(Cutting diameter can be changed by moving in the X-axis.)
2. It is recommended to set the outer insert as shown in Fig.1 with the outer insert facing the operator. (Fig.1)
(It is also possible to use it by setting it in 180° reverse position)
If the lathe has two turrets, when installing the drill into the lower turret, the outer insert should be set to face the operator.
(It is also possible to use it by setting at 180° reverse position)

Fig.1 Installed into the Lathe

Cutting Diameter Adjustment

1 Cutting Diameter Adjustment

1. Cutting diameter is adjusted by moving X-axis.
The moving direction of the X-axis depends on the position of the toolholder.
2. For making the hole diameter larger, slide the tool along the X-axis toward the outer insert side. (Fig.2, Fig.3)
For making the hole diameter smaller, slide the tool along the X-axis in the opposite direction.
(This movement of the axis is called an "Offset")
Be sure not to make the hole diameter smaller than the drill diameter by more than 0.2mm (0.008"). Otherwise, the toolholder will interfere with the drilled hole. (Fig.4)
Ex.) When using $\varnothing 20\text{mm}$ drill, the hole diameter must not be smaller than 19.8mm (0.780")

Fig.2 Outer Insert Facing Up

Fig.3 Outer Insert Facing Down

2 Offset Limit of the Cutting Diameter

- For the maximum limit of the cutting diameter, refer to "Max. Offset (Radial)" in the Toolholder Dimensions table.
(The figure in the Toolholder Dimensions table shows how much it is possible to offset the drill in the radial direction.)
Ex.) When using $\varnothing 20\text{mm}$ ($\varnothing 0.787''$) drill, for example, it is possible to make a hole up to $\varnothing 21.1\text{mm}$ ($0.831''$) since "Max. Offset (Radial)" is $+0.55\text{mm}$ ($+0.022''$).

Fig.4 Excessive Offset (For Smaller Hole Diameter)

Center Height Adjustment

1 Center Height of the Inner Insert

- When installing inner insert as shown in Fig.1, it will be set around 0.05mm (0.002") below the Center of Spindle. (Fig.5)
This is the normal position of the center height.
However, in case that the turret of the lathe is out of alignment with the Center of Spindle, sometimes the inner insert may be above or below center.
For stable machining, it is essential to check the Center Height of the inner insert carefully

Fig.5 Front View of the Drill

2 How to Check the Center Height

- For checking the center height of the inner insert, see the core which remains at the center of the bottom of the drilled hole.
If the center height is in the normal position, a core of about 0.5mm (0.020") in diameter, will remain after machining. (Fig.6)
Adjustment of center height is required if no core is present or a large core diameter of 1mm (0.039") or more remains.
* The drilled hole for verification purposes needs to be machined at approximately 10mm (0.375") in depth and at a feed rate of 0.004 ipr or lower.

Fig.6 Center Core

3 Center Height Adjustment

1. When there is no remaining core and the inner insert is chipping

This occurs when the inner insert is set above center. (Fig.7)

How to Adjust
A. Install the drill rotated by 180° Most problems will be solved by this method (Fig.8)
B. If the core diameter becomes too large after the above adjustment, install the drill by rotating 90° counter-clockwise as shown in Fig.9 (outer edge is positioned lower) and adjust the center height by moving the tool in the X-axis direction. (However, this will make it impossible to adjust the cutting diameter) Caution: When installing the drill in the opposite direction (outer insert is positioned above), the cutting diameter will become smaller, which may cause the drill body to interfere with the drilled hole. The best solution is to readjust the center position of the turret itself.

Fig.7 Insert breakage near the center of the drill

Fig.8

Fig.9

2. Core with Excessively Large Diameter More than 1mm (0.039")

This occurs when the inner insert is below center

This condition causes poor chip evacuation and an adjustment is required.

How to Adjust
Install the drill rotated 90° as shown in Fig.10. (outer insert is positioned on the upper side) and adjust the center height by moving tool in the X-axis direction. (However, this will make it impossible to adjust the cutting diameter) Caution: When installing the drill in the opposite direction (outer insert is positioned lower), the cutting diameter will become smaller, which may cause the drill body to interfere with the drilled hole. The best solution is to readjust the center position of the turret itself.
