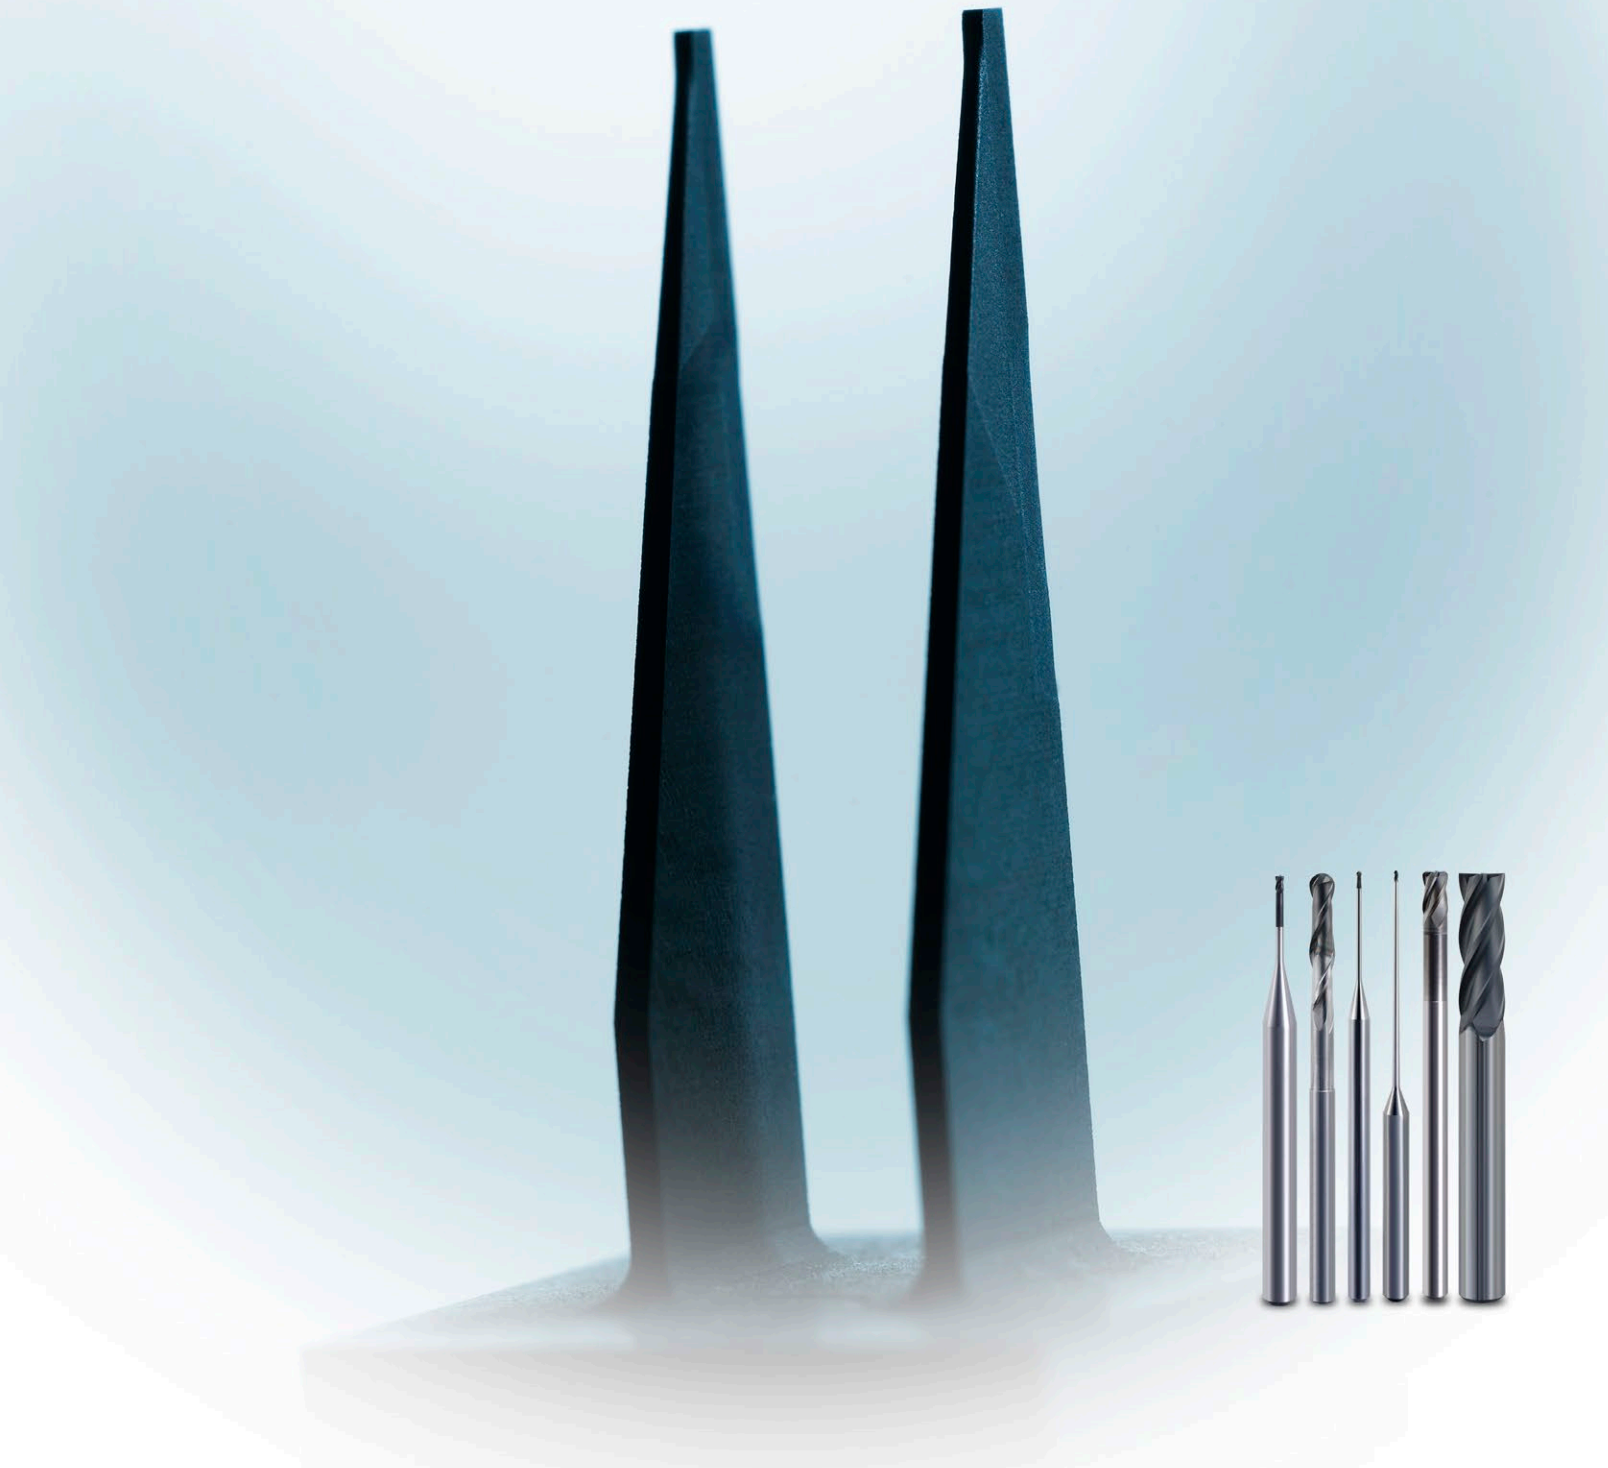
2015.10 Update B179A YOUR GLOBAL CRAFTSMAN STUDIO

Diamond coated end mills for graphite

DF end mill series

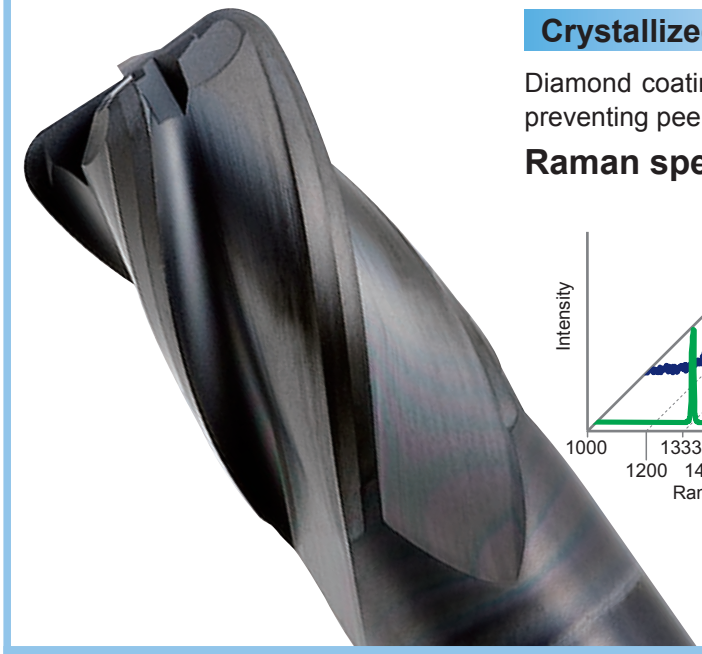
New item expansion

High performance graphite milling.



Diamond coated end mills for graphite

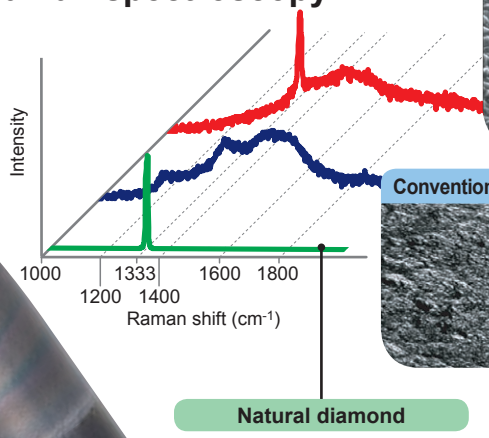
DF (Diamond Four : Fixed / Fast / Fine / First) end mill series



Crystallized diamond coating

Diamond coating is affixed to substrate ensuring long tool life and preventing peeling.

Raman spectroscopy



Fixed crystallized diamond structure

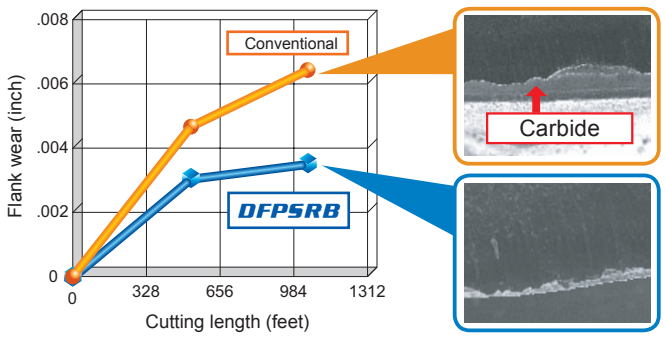
Fixed

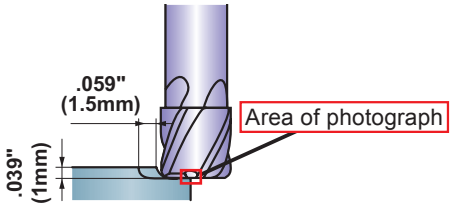
Fast, long life diamond coating

Fast

Excellent wear resistance compared to competitors end mills!

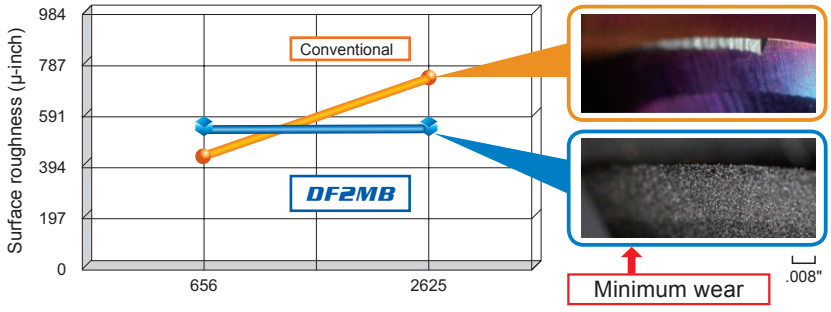
Cutting performance (DFPSRB)

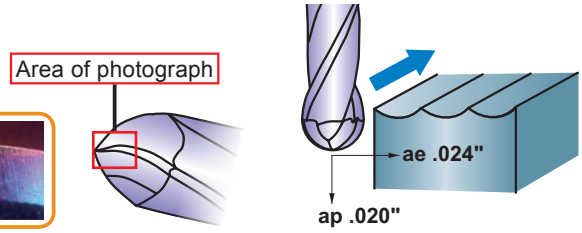




End mill	DFPSRBD0600R100N30 (ø6)
Work material	Graphite (ISO-63)
Revolution	20000min^{-1} (1235 SFM)
Feed rate	2500mm/min (98 IPM)
Cutting fluid	Dry

Cutting performance (DF2MB)



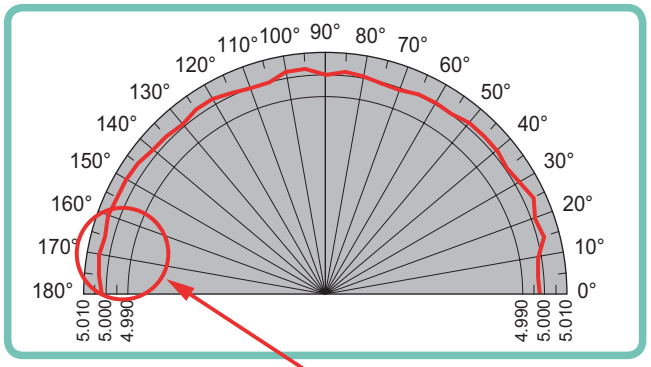


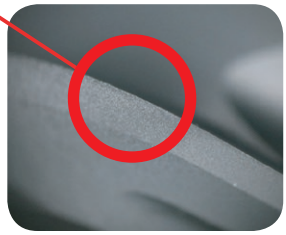
End mill	DF2MBR0300A100
Work material	Copper
Revolution	13000min^{-1} (440 SFM)
Feed rate	1300mm/min (51 IPM)
Cutting fluid	Wet

Water-soluble cutting fluid is recommended for milling copper alloys.

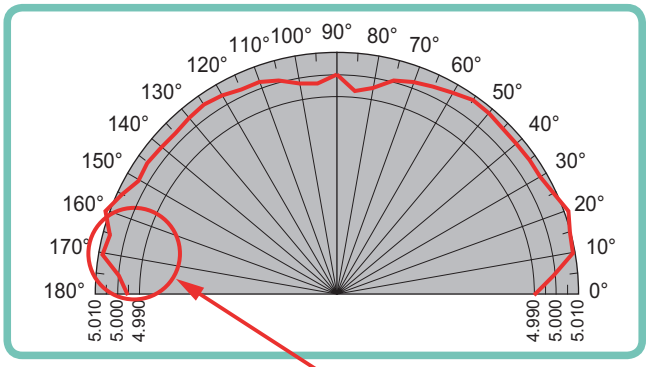
The seamless blend between corner radius and peripheral cutting edge ensures a good surface finish.

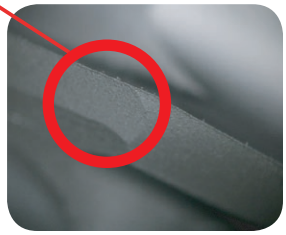
DF2MB(Seamless)





Conventional





Fine

Fine seamless geometry

First

First choice for graphite machining

DF2MB Expansion

Ball nose, Medium cut length, 2 flute, For graphite

R3×100–R6×200mm

12 different sizes available

DFP5RB

Corner radius end mill, Short cut length, 2-4 flute, High precision, For graphite

ø0.5×R0.1×4–ø12×R0.5×40mm

41 different sizes available

DF4JC

End mill, Semi long cut length, 4 flute, For graphite

ø3–ø12mm

6 different sizes available

DF2XLB Expansion

Ball nose, 2 flute, Long neck, For graphite

R0.1×0.5–R3×12mm

52 different sizes available

DF3XB

Ball nose, 3 flute, Taper neck, For graphite

R1×0.5°×30–R2×0.5°×100mm

9 different sizes available

DF4XL

End mill, Long neck, 4 flute, For graphite

ø1×6–ø12×30mm

17 different sizes available

DF4JC

End mill, Semi long cut length, 4 flute, For graphite

Depth of cut										

1) When high machining accuracy is needed, or work piece becomes chipped, we recommend lowering feed rate.
2) Use a milling machine dedicated for graphite.
3) If rigidity of machine or work materials installation is very low, or chattering and noise are generated, reduce revolution and feed rate proportionately.

Depth of cut											

1) When high machining accuracy is needed, or work piece becomes chipped, we recommend lowering feed rate.
2) Use a milling machine dedicated for graphite.
3) If rigidity of machine or work materials installation is very low, or chattering and noise are generated, reduce revolution and feed rate proportionately.

Depth of cut												

1) When high machining accuracy is needed, or work piece becomes chipped, we recommend lowering feed rate.
2) Use a milling machine dedicated for graphite.
3) If rigidity of machine or work materials installation is very low, or chattering and noise are generated, reduce revolution and feed rate proportionately.

Memo

Diamond coated end mills for graphite

DF endmill series

For your safety
●Cutting flutes and chips have sharp edges. Never touch these with your bare hands. ●Use these products within their recommended range of conditions, and make sure to replace tools before excessive wear occurs. ●Lathes may scatter hot chips or eject long chips. Make sure to use protective equipment such as safety cover and protective eye wear to prevent injury. ●Always take appropriate fire protection measures if non-water-soluble cutting fluid is used. ●If the tool is to be rotated for use, always make sure to perform a test run to check for shaking, vibrations, and unusual sounds.
