DIA EDGE

VQ4MVM

HIGH-PERFORMANCE SMART MIRACLE END MILL

ABOUT OUR BRAND

Your manufacturing success is our success.

It's simple. We want to provide high-quality cutting tool products that help deliver unparalleled performance and control for you to manufacture precisely perfect products every day.

Our long heritage of building partnerships through cutting tool solutions to metal working manufacturers, like yours, has given Mitsubishi Materials USA a solid reputation as an industry leader. We understand the importance of getting it right the first time by delivering high-quality cutting tool product brands to help overcome machining challenges to improve machining processes.

Your success is our success and is the driving force behind our innovative products. Our product brands, DIAEDGE and MOLDINO, are trusted globally in the metal manufacturing and die & mold industries for delivering expertly-designed manufactured tools of the trade for highly specialized industries like yours.

With the acquisition of MOLDINO Tool Engineering, Ltd, our traditional Mitsubishi Materials USA cutting tool product line is now sold under the DIAEDGE product brand name.

Brands you can trust:

MITSUBISHI MATERIALS U.S.A.

TRUSTED PRODUCT BRANDS

DIAEDGE MOLDINO

High-Performance End Mill

SMART MIRACLE End Mill Series

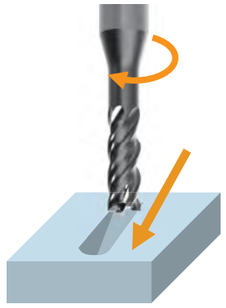
VQ4MVM

Multi-functional end mill capable of steep ramping when machining a wide range of materials.

Ramping is a method of sinking gradually as the tool traverses.

This eliminates the need for a pilot hole when machining pockets, thereby reducing costs through tool consolidation. Compared to direct plunge cutting, ramping enables simultaneous multi-axis feed at high speeds to lower machining times. This method is ideal for machining wide and shallow pockets.

VQ4MVM provides high-performance and multi-functionality. It can perform shoulder milling, grooving, and helical machining, as well as ramping angles of up to 30º in carbon and alloy steels.



Steep Ramping Capability

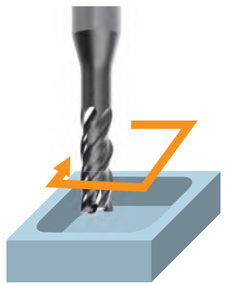
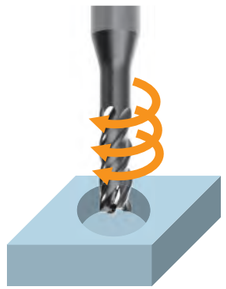
Slot Milling



Pocket Milling



Helical Milling

SMART MIRACLE End Mill Series

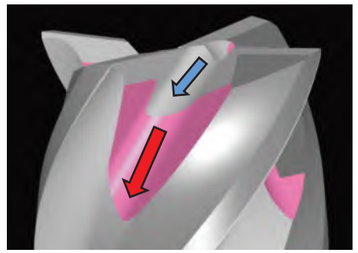
Newly-developed coating with improved wear resistance.
The smoothening treatment of the coating layer reduces cutting resistance and significantly improves chip discharge.

SMART MIRACLE Coating (Al,Cr)N coating is the most suitable coating for higher efficiency machining.

ZERO-μ Surface The original surface treatment technology provides a smooth coating layer.

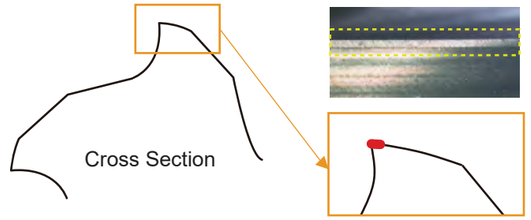
Secondary Gash

A first and secondary gash provides high capacity chip evacuation that far exceeds conventional designs when ramping.



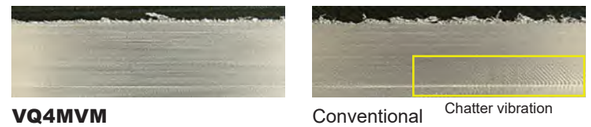
Micro Relief Angle

This exerts a margin effect that provides a guide during machining.
Combined with irregular helix flutes, vibration damping and suppression of burrs are improved.



Irregular helix flutes and the micro relief angle improve vibration damping and provide excellent surface finishes.

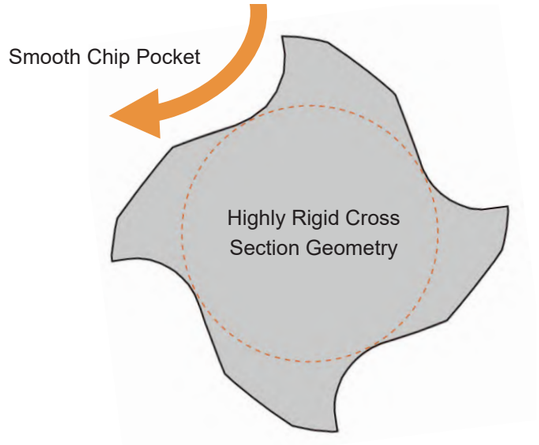
ANSI 304 vc=330 SFM, fz=.002 IPT, ap=.197 inch, ae=.118 inch



VQ4MVM Conventional

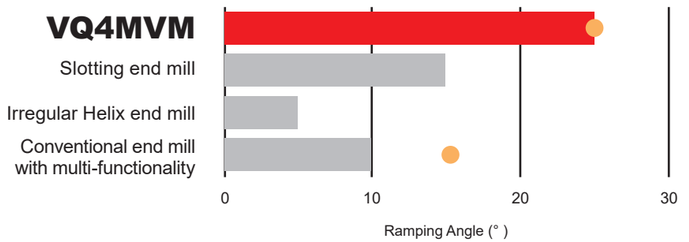
Chip Pocket and Highly Rigid Geometry

VQ4MVM is suitable for steep ramping and chip evacuation performance due to the highly rigid geometry.

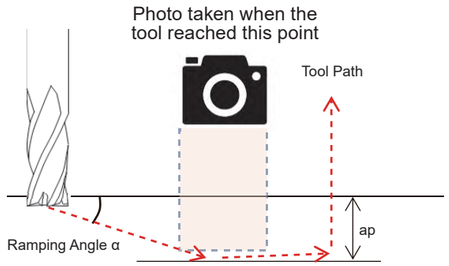


Comparison of Ramping Angles when Machining 304

Provided a good machined surface when machining with a ramping angle of 25°. The cutting conditions used in this comparison test differ from the recommended conditions. Please check the recommended conditions before commercial use.



<Cutting Conditions>
Workpiece Material : AISI 304
Tool : Ø.394 inch
Cutting Speed : vc=165 SFM
Feed per Tooth : fz=.001 IPT
Depth of Cut : ap=.394 inch
ae=.394 inch
Over Length : 1.378 inch
Cutting Mode : External Coolant (Emulsion)
Machine : Vertical M/C (BT50)



● : Machining Surface

VQ4MVM 25°

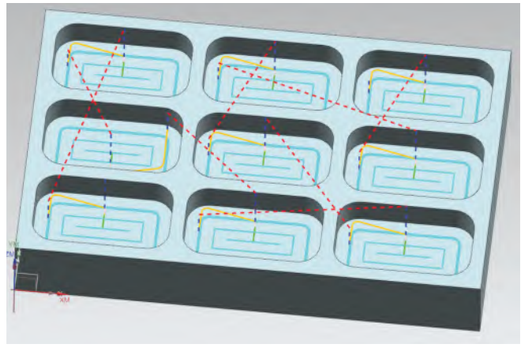
Conventional end mill 15°

Comparison of Continuous Pocketing when Machining 1055

During continuous machining of small pockets, steep ramping reliably shortens machining time.

Workpiece Material : AISI 1055 Pocket Size 1.969” x 1.181” x .394” R=8
Tool : Ø.394 inch

Simulated by **VQ4MVM**



Total Cycle Time 4:35

Ramping Angle 17° At the start of machining

<Cutting Conditions>
Cutting Speed : vc=330 SFM
Feed per Tooth : fz=.002 IPT
Depth of Cut : ap=.394 inch

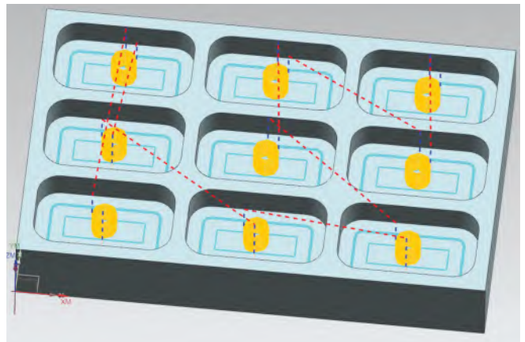
Rough Cutting

<Cutting Conditions>
Cutting Speed : vc=330 SFM
Feed per Tooth : fz=.003 IPT
Depth of Cut : ap=.394 inch
ae≤.197 inch

Finish Cutting

<Cutting Conditions>
Cutting Speed : vc=330 SFM
Feed per Tooth : fz=.003 IPT
Depth of Cut : ap=.394 inch
ae≤.197 inch

Simulated Conventional Machining



Total Cycle Time 6:42

Helical Angle 2° At the start of machining

<Cutting Conditions>
Cutting Speed : vc=330 SFM
Feed per Tooth : fz=.003 IPT
Depth of Cut : ap=.394 inch

Same cutting conditions for roughing and finishing

Depth of Cut

Note 1) SMART MIRACLE coating has very low electrical conductivity. Therefore, an external contact type of tool setter (electric transmitted) may not work. When measuring the tool length, please use an internal contact type (non-electrical type) or a laser tool setter.
Note 2) When cutting austenitic stainless steels and titanium alloys, the use of water-soluble cutting fluid is effective.
Note 3) If the depth of cut is shallow, the revolution and feed rate can be increased.
Note 4) If the rigidity of the machine or the work materials installation is very low, or chattering and noise are generated, reduce the revolution and feed rate proportionately.

For Your Safety

- Don't handle inserts and chips without gloves.
- Please machine within the recommended application range and exchange expired tools with new ones in advance of breakage.
- Please use safety covers and wear safety glasses.
- When using compounded cutting oils, please take fire precautions.
- When attaching inserts or spare parts, please use only the correct wrench or driver.
- When using rotating tools, please make a trial run to check run-out, vibration and abnormal sounds etc.
