CORNER RADIUS END MILL FOR HIGH EFFICIENCY TITANIUM ALLOY MACHINING

TOOL NEWS **B230A**

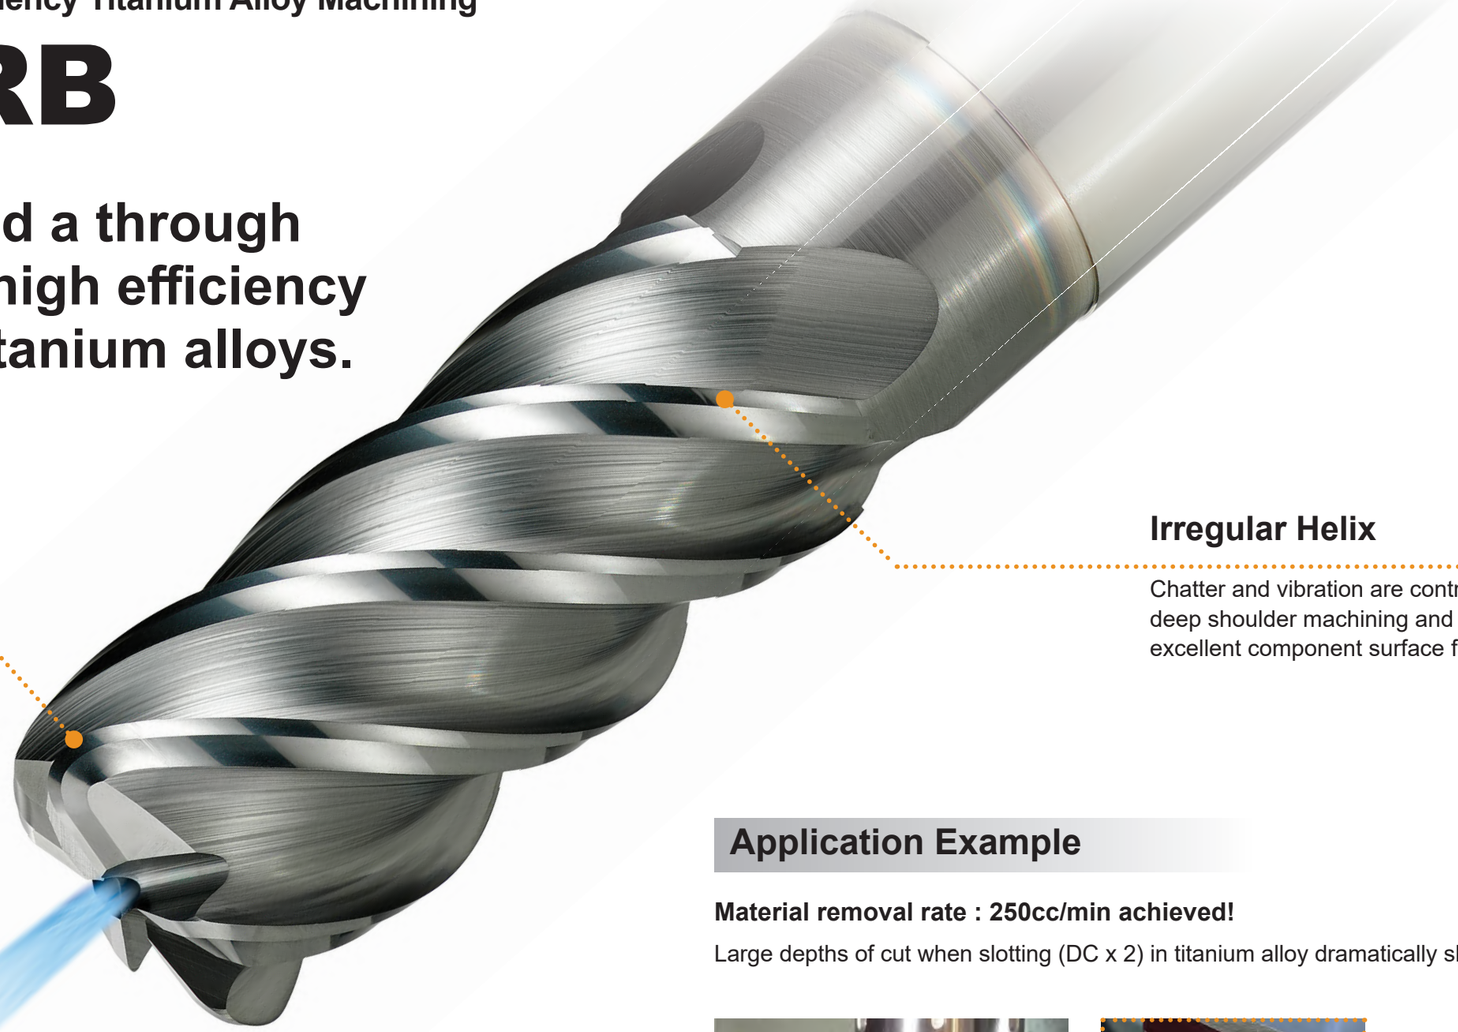
Corner Radius End Mill for High Efficiency Titanium Alloy Machining

VQT5MVRB

Combining 5 flutes and a through coolant hole enables high efficiency rough machining of titanium alloys.

Corner Radius (Emphasis on Sharpness)

A unique rake angle improves cutting resistance and chip discharge.
The seamless blend between the corner radius and peripheral cutting edge suppresses abnormal wear and provides a stable tool life.

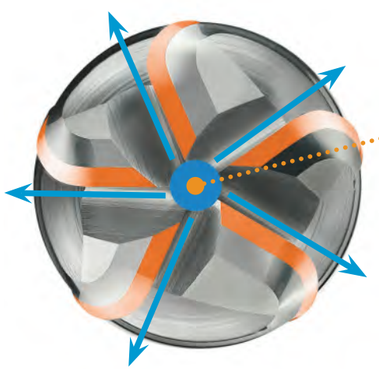


Irregular Helix

Chatter and vibration are controlled even during deep shoulder machining and also provides excellent component surface finishes.

5 Flutes

Having the same chip evacuation properties of a 4 flute type enables deep slot milling.
The additional flute and deep cutting capability reduces the number of passes.



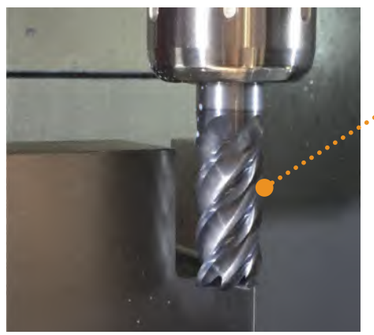
Coolant Hole

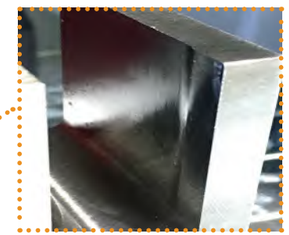
The center coolant provides a stable supply of cutting fluid and dramatically improves chip evacuation.
This also cools the cutting edge and prevents chip biting.

Application Example

Material removal rate : 250cc/min achieved!

Large depths of cut when slotting (DC x 2) in titanium alloy dramatically shortens rough machining times.





Machined Surface

<Cutting Conditions>

Workpiece Material	: Ti-6Al-4V
Tool	: VQT5MVRB250R400N075C
Revolution	: n=636min^{-1}
Feed Rate	: vf=8.110 IPM
Depth of Cut	: ap=1.969 inch (DC×2)
Width of Cut	: ae=.984 inch (Slot)
Overhang Length	: 2.953 inch (DC×3)
Cutting Mode	: Slot Milling Internal Coolant + External Coolant (Emulsion)
Machine	: Vertical MC (BT50)

Corner Radius End Mill for High Efficiency Titanium Alloy Machining

VQT5MVRB NEW

Corner radius, Medium cut length, 5 flute, Irregular helix flutes, With coolant hole

Carbon Steel, Alloy Steel, Cast Iron (<30HRC)	Tool Steel, Pre-Hardened Steel,Hardened Steel (≤45HRC)	Hardened Steel (≤55HRC)	Hardened Steel (>55HRC)	Austenitic Stainless Steel	Heat Resistant Alloy	Copper Alloy	Aluminum Alloy

Note 1) SMART MIRACLE coating has very low electrical conductivity; therefore, an external contact type of tool setter (electric transmitted) may not work.
When measuring the tool length, please use an internal contact type (non-electricity type) or a laser tool setter.

* Number of Flutes

DC = Dia.
RE = Corner Radius
APMX = Length of Cut
LU = Neck Length
DN = Neck Dia.
LF = Overall Length
DCON = Shank Dia.

● : Inventory maintained.

		6	**.236**	165	640	3.8	1.969
Depth of Cut				 DC=Dia.			

(Note 1) SMART MIRACLE coating has very low electrical conductivity; therefore, an external contact type of tool setter (electric transmitted) may not work.
When measuring the tool length, please use an internal contact type (non-electricity type) or a laser tool setter.
(Note 2) When cutting titanium alloys, the use of water-soluble cutting fluid is effective.
(Note 3) The irregular helix flute end mill has a larger effect on controlling vibration when compared to standard end mills. However, if the rigidity of the machine or the work material installation is poor, vibration or abnormal sound can occur.
In this case, please reduce the revolution and the feed rate proportionately, or set a lower depth of cut.
(Note 4) If the depth of cut is smaller, the revolution and the feed rate can be increased.
(Note 5) When machining deep slots where the depth of cut exceeds the diameter DC, use a high strength holder or one equipped with a retaining mechanism.
Additionally ensure the clamping and workpiece material rigidity are sufficient.
Refer to page 9 for Holder recommendation.
(Note 6) When machining a deep slot exceeding 1D, use a holder with a high gripping strength or an anti slippage mechanism.
Also, make sure that the clamping force and rigidity are sufficient before use.

Cutting Performance

Slot Milling with Deep Depths of Cut in Titanium Alloy

The seamless corner radii achieves stable tool life.

Conventional

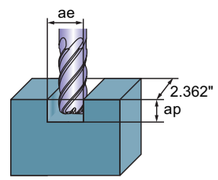
Fractures (After 6 slots)

VQT5MVRB

After 17 slots

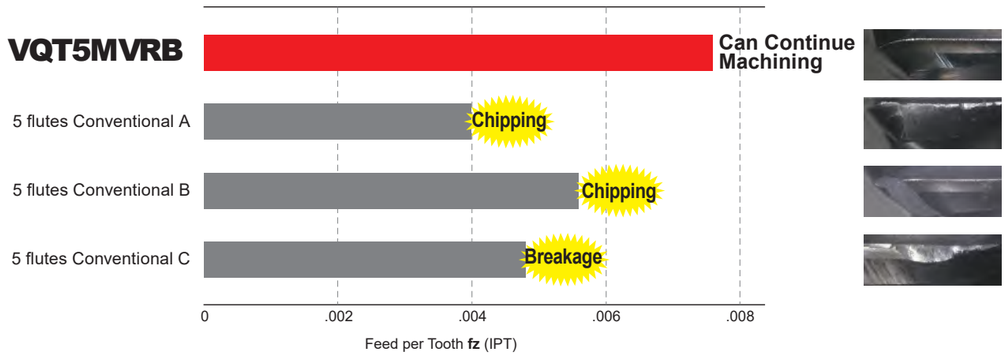
Triple Tool Life

<Cutting Conditions>
Workpiece Material : Ti-6Al-4V
Tool : VQT5MVRB160R300N048C
Revolution : n=1200min^{-1}
Feed Rate : vf=26.0 IPM
Depth of Cut : ap=.630 inch
Width of Cut : ae=.630 inch (slot)
Cutting Length : 2.362 inch (1 slot)
Overhang Length : 1.890 inch (DC×3)
Cutting Mode : Slot Milling
Internal Coolant +
External Coolant (Emulsion)
Machine : Vertical MC (BT50)



Comparison of Maximum Cutting Feed for Titanium Alloy Slot Milling

When compared with conventional products, high efficiency milling can be achieved.



<Cutting Conditions>
Workpiece Material : Ti-6Al-4V
Tool : VQT5MVRB160R300N048C
Revolution : n=1200min^{-1}
Depth of Cut : ap=.630 inch
Width of Cut : ae=.630 inch (Slot)
Cutting Length : 2.362 inch (1 slot)
Overhang Length : 1.890 inch (DC×3)
Cutting Mode : Slot Milling
Internal Coolant +
External Coolant (Emulsion)
Machine : Vertical MC (BT50)

Key Point for High Efficiency Machining of Titanium Alloys

For high efficiency machining, it is recommended to use a precision, high strength holder to prevent pull out of the tool.
Some high strength holders require modification of the cutting tool shank.

FOR YOUR SAFETY

- Don't handle inserts and chips without gloves.
- Please machine within the recommended application range and exchange expired tools with new ones in advance of breakage.
- Please use safety covers and wear safety glasses.
- When using compounded cutting oils, please take fire precautions.
- When attaching inserts or spare parts, please use only the correct wrench or driver.
- When using rotating tools, please make a trial run to check run-out, vibration and abnormal sounds etc.
