ALL-STAR

THE ALL-STAR PROGRAMME PROVIDES
PROVEN SOLUTIONS THAT ARE EASY
TO FIND AND ALWAYS AVAILABLE.

All-Star includes products from our most popular platforms, grades, and sizes grouped into our programme and guaranteed to be in stock with same-day shipping on orders placed before 4pm CET.

Visit widia.com to see what products are available for same day shipping through all-star.

Solid End Milling

VSM890™-12

UNIQUE 8-EDGED SOLUTION FOR
SHOULDER AND FACE MILLING

VSM890™ -12

Weldon® End Mills: 32mm

Shell Mills: 40–250mm

8-Edged, Double-Sided True 90° Victory™ Shoulder-Face Mill (VSM)

Superior Metal Removal Rates (MRR) delivered through high-performance grades and chipbreakers.

Coarse, medium, and fine pitch cutter density to perfectly translate machining capability into higher productivity.

New pocket seat design for improved insert seating and great stability at roughing applications.

Applicable in a wide range of workpiece materials: aluminium, steel, cast iron, titanium, stainless steel, and high-temp alloys.

Comprehensive standard offering for cutter bodies and inserts to address light machining to heavy roughing jobs.

SNHX-MM • Universal Geometry for Medium Machining.
Corner Radii Expansion for -MM Chipbreaker

WK15CM

VSM890™ -12

0°/90° Shoulder Mills • VSM890-12

- True 90° wall and stepping down capability.
- Axial depth of cut capability; Ap1 max up to 9,8mm.
- Optimised chip gash design for proper chip evacuation.
- User-friendly pocket numbering system.
- Cutter bodies with internal coolant supply.
- Less bur creation on the workpiece.

Super-positive rake design for low machine power consumption.

Integrated wiper facet for excellent surface floor finish.

Unique insert rake design to reduce and perfectly balance axial and radial cutting forces. Engineered for light machining to heavy roughing in all material groups.

-ALP

N

First choice for Non-Ferrous materials.

-ML

P M S

First choice for Stainless Steel, light machining, and finishing jobs.

-MM

P M K S H

First choice for general purpose in all workpiece materials. Engineered for high-feed rates.

Finishing Capabilities/Lower Cutting Forces

Geometry Strengthening/Stronger Cutting Edge Protection

Applications

1. Face milling.
2. Full slotting with 100% radial engagement.
3. Shoulder milling with stepping down and great wall finish.
4. Shoulder milling with low axial and high radial engagement.
5. Shoulder milling with low radial and high axial engagement.
6. HPC face milling. First choice to clean up castings.
7. Dynamic/trochoidal slot milling.
8. Z-axis plunge milling.
9. Z-axis contour plunge milling.
10. Z-axis zig-zag slot plunge milling.

NOTE: Use "Light Machining" values as starting feed rate.

Best Practices

True 90° roughing tool with embedded finishing capabilities all in one tool.

Best-in-class wall finish with VSM890-12 in axial stepping-down jobs. For many shop floor setups, no additional finishing is required resulting in shorter machining time and lower tooling cost.

Excellent wall finish with VSM890-12

- Unstable setup.
- Low spindle power.
- High axial depth of cut A_p1 .
- Low feed rate.
- Machining aluminium.
- Driven tools.

- Regular setup.
- Regular spindle power.
- Medium feed rate.

- Rigid setup.
- High spindle power.
- Low axial depth of cut A_p1 .
- High feed rate.
- Boost productivity and cut into cycle time.

WIDIA 

WIDIA™ Victory™

WS40PM

Breakthrough in the latest substrate and coating technology to boost productivity in **stainless steels and high-temp alloys**

Advanced Milling Grade for Titanium

Multilayer PVD AlTiN-TiN Coating

- Improved chemical and abrasive wear resistance.
- Consistent tool life performance.
- Primarily for wet machining. Also great results in dry machining.

New Medium-Grained Substrate

- Minimises tendency for thermal cracking.
- Excellent fatigue resistance and edge strength.
- Rich in cobalt content for improved toughness.

VXF™

VICTORY™ X-FEED™

NEXT LEVEL OF HIGH-FEED MILLING

VXF is a high-feed productivity booster designed to establish new industry standards with market-leading milling grades like WS40PM.

VXF™ -07

Ap1 max: 0,9mm
fz max: 1,2mm/z

VXF™ -09

Ap1 max: 1,5mm
fz max: 2,0 mm/z

VXF™ -12

Ap1 max: 2,5mm
fz max: 3,0 mm/z

VXF™ -16

Ap1 max: 3,5mm
fz max: 2,0 mm/z

Optimised cutter body and chip gash design perfectly serves high-feed requirements.

PSTS inserts for powerful low cost per edge high-feed milling.

Cutters with internal coolant supply.

Nickel-plated surface protection.

- 16.5° lead angle redistributes cutting forces in the spindle z-axis direction.
- Greatly reduces tool deflection and vibrations for improved tool life.
- Suitable for long tool reach.
- Unique integrated radial wiping facet to achieve a nice wall finish at pocket and helical interpolation milling.
- Durable cutting edges qualified to machine a wide range of materials.
- WS40PM — best-in-class milling grade for machining stainless steel and HTA.

Perfect combination of round and square insert style.

Specifically engineered chipbreakers for powerful high-feed milling.

-MM

P M S

First choice for Soft Steel, Stainless Steel, and High-Temp Alloys. Best fit for pocketing and profiling operations.

WIDIA 

Compatible with all Standard ER Collet Chucks and ER Driven Units

Solid ER Collets

Threaded solid ER collets turn CNC lathe machines into multitasking machines by providing access of any small diameter screw-on milling cutter to ER driven units.

These new solid ER collets increase machine utilisation through modular flexibility.

The short projection from the face of the collet nut provides rigid toolholding and a smaller required machine envelope.

NOTE: FIRST choice starting speeds are in **bold** type. As the average chip thickness increases, the speed should be decreased.
 *Material groups P, M, K, and H show recommended starting speeds for dry machining. For wet machining, reduce speed by 20%.
 *Material groups N and S show recommended starting speeds for wet machining. Not recommended for dry machining.

Recommended Starting Feeds [mm]

VSM17™

0°/90° Shoulder Mills • VSM17

- True 90° shoulder milling platform; up to $A_{p1} \text{ max} = 16\text{mm}$.
- Aggressive ramping capability up to 8.8° with end mills with a diameter of 25mm.
- Optimised chip gash for improved cutter stability and chip flow.
- Well-guided internal coolant supply to the cutting edge.
- Best-in-class milling grade WS40PM boosts productivity when machining stainless steel and high-temp alloys.

Geometries for all material groups in shoulder milling applications.

NOTE: FIRST choice starting speeds are in **bold** type. As the average chip thickness increases, the speed should be decreased.
 *Material groups P, M, K, and H show recommended starting speeds for dry machining. For wet machining, reduce speed by 20%.
 *Material groups N and S show recommended starting speeds for wet machining. Not recommended for dry machining.

Recommended Starting Feeds [mm]

NOTE: Use "Light Machining" value as starting feed rate.

Best Practices

Modification Instructions for Use of Larger Radii Inserts (Shoulder Mills and Helical Mills)

cutting diameter (D1)	max RPM	max ramp angle to steel body interference	max flat-bottom hole diameter (DH1 max)	min hole diameter (DH min)
25	41800	8,8°	50	32
32	34700	5,7°	64	46
40	29800	4,0°	80	62
50	25800	3,0°	100	82
63	22400	2,1°	126	108
80	19500	1,6°	160	142
100	17200	1,2°	200	182
125	15200	0,9°	150	132
160	13300	0,7°	320	302

NOTE: For DH1 max, subtract the insert corner radius from the max hole diameter.

insert corner radius	material to remove	
	a	b
2,4–4,0mm	2	3
4,0–6,0mm	4	5

NOTE: Standard milling cutters will accept insert nose radii up to 1,6mm without modification.

VSM17 Z-Axis Plunging

cutting diameter (D1)	Z max	Y
25	9	24,00
32	9	28,77
40	9	33,41
50	9	38,42
63	9	44,09
80	9	50,56
100	9	57,24
125	9	64,62
160	9	73,73

WIDIA-HANITA™

A SOLID FOUNDATION THE VARIMILL™ FAMILY

The WIDIA-Hanita VariMill family continues to provide leading-edge solutions for some of the most advanced applications in the general engineering, aerospace, and defense industries. These industries require complex machining techniques in some of the most exotic materials.

VariMill I™ Line Expansion

Series 4777 Series 47N7

This 4-flute geometry is designed with unequal flute spacing for plunging, slotting, and profiling at the highest possible feed rates for a wide range of materials.

VariMill II™ Line Expansion

Series 5777
Series 577C
Series 57NC
Series 57N8

This 5-flute geometry is designed with unequal flute spacing for advanced milling jobs in a wide range of materials.

VariMill III™

This 7-flute geometry is designed with unequal flute spacing and is designed to provide the highest Metal Removal Rates (MRR) and extended tool life in the most demanding materials in the aerospace industry.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameters.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on >12mm diameters.

70NS

VICTORY™ X-FEED™

PRODUCTIVITY IMPROVED IN
HIGH-FEED MILLING OF STAINLESS
STEEL AND TITANIUM MATERIALS

70NS Series

Designed for high feed rates.

6 flutes and 3 x D diameter neck reach.

Designed for circular plunging and ramping, 3D machining, face milling, and pocketing applications.

Stainless steel and high-temp alloys.

Improved tool life due to reduced radial forces.

Larger radial engagement vs. standard ball nose end mills.

5–10%
Radial engagement

55%
Radial engagement

NOTE: YRC = distance from centre line to the crown of the R radius.
 RCN = distance from centre line to the start of the cutting edge. This dimension can also help determine the minimum circle size when helical ramping.
 R = the head radius size.
 R_ε = the shoulder radius or radius at the corner of the cutter.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on diameters greater than 12mm.

4U50 & 4U80

AEROSPACE ROUGHING

4U50

Shallow pitch rougher.

4–6 flutes with variable spacing.

Short length of cut and 3 x D diameter neck length.

Stainless steel and high-temp alloys.

Centre cutting.

4U80

Shallow pitch rougher.

4–6 flutes with variable spacing.

Regular length of cut.

Stainless steel and high-temp alloys.

Centre cutting.

New Weldon® shank

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on greater than 12mm diameters.

GP

4-FLUTE RADIUS END MILLS

THE EVOLUTION OF A SOLID
CARBIDE END MILL REVOLUTION

GP 4-Flute Radius End Mills

WIDIA-Hanita general purpose end mills offer plunging, slotting, and profiling for a wide range of materials and applications. Designed to provide high metal removal rates and excellent surface conditions at a value price. A wide range of diameters, lengths, and corner styles (such as chamfered, sharp edge, and ball nose) are available from stock.

Radius Series — 4004/4014/4024

- Centre cutting.
- Steel, stainless steel, and cast iron.
- Radius corner for extended tool life.
- Regular, long, and extra long length of cut.

The WIDIA-Hanita™ solid carbide end mill product lines have built a strong ongoing reputation of continuous development and diversification.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centres, please adjust parameters accordingly on greater than 12mm diameters.

The NOVO™ Application Provides the Digital Power

To Get Information Quicker Than Ever Before.

Export Compatibility to Mastercam®

Select tools, save into “job lists”.

Interactive feed & speed calculators.

Find inventory availability.

Download 2-D and 3-D models.

Easy interface with many CAM and tool management data systems.

TDMX

TOP DRILL™ MODULAR X

STABILITY AND RELIABILITY COMBINED INTO ONE MODULAR DRILL SYSTEM

WIDIA™ TOP DRILL Modular X (TDMX) is the ultimate choice for high-demanding drilling applications when stability and reliability are required.

Platform

Standard cutter bodies in 1.5 x D, 3 x D, 5 x D, 8 x D, and 12 x D.

Insert diameter range from 16mm up to 40mm.

One geometry and grade to cover steel and cast iron applications.

Easy to Apply

Front clamping design. No need to disassemble the body from the holder to change insert.

Easy insert nomenclature logic to identify the targeted material group.

Increased Stability and Performance

Highly engineered pocket seat design to ensure maximum stability, even in challenging applications like cross hole, inclined entry/exit, and interrupted cuts.

Suitable for high feed rates.

Flanged shank for higher rigidity.

Polished flutes for improved chip evacuation.

Brand new WP40PD grade for longer tool life in steel and cast iron applications.

FPE: P, M, K Flat bottom drilling, stacked plates, piloting for deep-hole drilling.
New 1.5 x D and 12 x D bodies

TDMX — TOP DRILL™ Modular X

Modular Drills • TOP DRILL Modular X

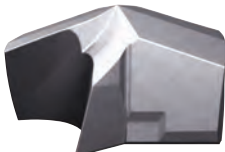

- Augmented insert stability thanks to the highly engineered pocket seat design.
- Front clamping for an easy insert change, without disassembling the holder from the machine spindle.
- Diameter range from 16mm up to 40mm.
- L/D ratio of 1.5 x D, 3 x D, 5 x D, 8 x D, and 12 x D.

One geometry to cover two material groups in modular drilling.

PK(M)

P K

First choice for Steel and Cast Iron drilling.

NEW!

FPE(M)

P M K

Flat bottom drilling, stacked plates, piloting for deep-hole drilling.

TDMX Components

Drilling is not always a simple, straightforward job. Workpiece instability, vibrations, and chip control are just a few challenges typically encountered in drilling applications. In addition to these challenges, the cost per hole becomes a critical subject in many shops with pressure to achieve sustainable production at the lowest cost possible. The TOP DRILL Modular X (TDMX) holemaking solution is able to address such machining applications and economic requirements with ease.

Tube sheets, baffles, I-beams, valves, axles, and track drive units are just a few examples of components that can be machined with more confidence thanks to the TDMX drill, its material-specific inserts, and optimised body design.

The combination of an extra stable pocket seat design, reinforced cutting corners, and a through grade, ensures increased process reliability and consequently longer tool life associated, with better hole quality.

The WP40PD grade provides the right toughness to face even the most unstable cutting conditions while also suitable for MQL applications.

The PK(M) point geometry is designed to operate high feed rates and provide the right guidance for improved hole straightness.

The FPE(M) flat bottom geometry is the solution to address the most challenging operations such as thin stack plate drilling, half holes, and any other applications where the standard 140° shows limits. FPE(M) can also be used as pilot for deep-hole drills.

Modular Drills • TOP DRILL™ Modular X

TDMX Application Notes • Power and Coolant Requirements

NOTE: The diagrams above are used to determine the drive power, feed force, and torque. They are based on cutting force measurement in tempered steels in Cgr. 6. Tensile strength: $R_m = 600 \text{ N/mm}^2$. The base cutting speed used is: $vc = 80 \text{ m/min}$.

S	36-37,999	22,1	24,5
T	38-40,000	22,1	24,5

The following coolant pressure is recommended:

relative drilling depth	coolant pressure
1-3 x D	8 bars
5 x D	12 bars
7 x D	20 bars
10 x D	30 bars

TOP CUT 4™

THE NEXT GENERATION
OF INDEXABLE DRILLING

One Comprehensive Platform

Standard diameter range covering 12–68mm
in 2 x D, 3 x D, 4 x D, and 5 x D.

Four real cutting edges on each insert for entire platform.

Eight insert sizes to cover complete diameter range.

Easy to Apply

No risk of mixing up inner and outer insert due to clear
visual differences.

Easy-to-change inserts, laser marked with geometries and grades.

Easy-to-use nomenclature guide enabling the tool body and the
related insert selection to avoid order failures.

Highly Versatile

Breadth of application capabilities include through and cross holes,
inclined entry and exit opportunity, 45° corner, half cylindrical,
concave, or chain drilling.

Various geometries and grades available.

WIDIA™ Top Cut 4™ (TC4) portfolio is a broad offering for
customers looking for a versatile indexable drilling platform.

Top Cut 4™

Indexable Drills • Top Cut 4

- 2x four true cutting edges.
- Cutting edge profile of central and periphery insert work together, leading to high stabilisation of the drill, preventing drifting of the tool even on irregular surfaces.
- X-offset design to adjust diameter size on turning machines and optimise tolerances on machining centres.
- Apply where speed and economy are prime considerations.
- Four grades to achieve higher tool life at accelerated speeds:
 - WU25CH grade for highest metal removal rate in general applications.
 - WU40PH grade for high toughness demands.
 - WPK10CH grade for high-speed applications.
 - WN10PH grade specific for aluminium and other non-ferrous materials.

Chip Flute Exit

Steeper chip flute exit to reduce the overall length and increase rigidity.

Coolant Channels

Enhanced coolant holes to get more lubrication at the cutting edge.

SL Shank Style

Metric portfolio: shank sizes are 20mm, 25mm, 32mm, and 40mm, based on the cutting diameter for all the L/D ratios.

Insert Positioning

Optimised insert positioning to achieve the maximum drill stability, hole tolerance, and surface quality, above all in deep-drilling applications.

Gash

Improved gash design on both insert pocket seats for a better chip evacuation.

Top Cut 4 Inserts Expansion — Long Chip Materials — Non-Ferrous Materials.

-V34

P K

First choice for machining Steel, Cast Iron, and short chipping materials. Suitable for severe cutting conditions.

-V36

P M K

First choice for Stainless Steel. Suitable for deep drilling and where low power consumption is required.

-V36 WN10PH

N

First choice for Non-Ferrous materials.

-V38

P M S

Ideal for long chipping materials.

Top Cut 4 Bodies Upgrade

Diameter 30mm, 4 x D example

Current

Gash
Optimised gash for improved chip flow and more precise **insert pocket seat positioning**.

Top Cut 4™

Indexable Drills • Top Cut 4

-V36 WN10PH for Non-Ferrous Materials

Productivity

- Perfect combination of edge preparation and grade for aluminium machining.
- TiB₂ based coating specific for non-ferrous materials.
- Optimal chip control and no built-up edge, even in very soft aluminiums.

Performance

- High cutting speed capability thanks to the state-of-the-art TiB₂ coating.
- The WN10PH grade geometry is available on the inboard insert, as well as on the outboard insert.
- Better general hole quality (surface and dimension) thanks to edge preparation and coating combination when compared to a standard universal insert.
- Longer and predictable tool life leads to avoiding the generation of built-up edge.

Technical Details

- PSTS inserts.
- Positive and sharp cutting edge.
- First choice for aluminium and other non-ferrous materials.
- Periphery insert with wiper land.

Top Cut 4 Inserts Expansion — Non-Ferrous Materials.

-V36 WN10PH

N

First choice for Non-Ferrous materials.

Hole Quality — Surface Finish

Diameter: 30mm 4 x D hole
Material: GAISI 7 Mg

-V36 WN10PH

Standard multipurpose grade and geometry

WIDIA 

-V38 Chipbreaker

Productivity

- Eliminates the formation of bird-nesting on the tool in long chip materials drilling.
- Improves the chip formation dramatically to guarantee a smooth chip flow.
- No machine stops due to bad chip evacuation on low carbon steels, stainless steels, and titanium — high process reliability.

Performance

- Larger feed rate window compared to the -V36 geometry when applied to low carbon steels and stainless steel.
- -V38 geometry is available on the inboard insert, as well as on the outboard insert.
- Better general hole quality (surface and dimension) thanks to the improved chip flow:
 - No drifting of the tool body causing deviation in the hole size.
 - No contact of the chips with the hole surface causing bad finishing.

Technical Details

- PSTS inserts.
- Special edge geometry for more effective chipbreaking action.
- First choice for low carbon steel, stainless steel, and super alloys.
- Periphery insert with wiper land.

-V38 Chipbreaker Application Areas

The new -V38 geometry is the first choice when:

- The drilling application with Top Cut 4™ platform bodies and inserts is applied to:
 - Low carbon steel (typically P0 and P1).
 - Stainless steels, such as AISI304, AISI316, and similar materials.
 - Titanium alloys, like Grade 2 and Grade 5.
- Bird-nesting on the tool body is an issue.
- Vibrations are generated due to a bad chip flow. Chip can't evacuate from the hole and generates big noise during machining.
- Bad surface quality caused by the chip in contact with the hole.
- Bigger hole size. Bad chip flow can generate tool drifting.
- Lower power consumption and less torque are needed.

Top Cut 4 Inserts Expansion — Long Chip Materials.

-V38

Ideal for long chip materials.

NOTE: SSC = Pocket Seat Reference. To correspond with the SSC on the inserts.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

NOTE: SSC = Pocket Seat Reference. To correspond with the SSC on the inserts.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

NOTE: SSC = Pocket Seat Reference. To correspond with the SSC on the inserts.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

NOTE: All speed conditions are for stable conditions. For unstable conditions, it is suggested to reduce starting speeds by 10%. For interrupted cuts, reduce by 20%.

For 4 x D, it is highly recommended to start with feed and speed values reduced by 10% less than above data.

For 5 x D, diameter range 12–23,99mm (insert sizes A to C), it is highly recommended to start with feed and speed values reduced by 20% less than above data.

For 5 x D, diameter range 25–68mm (insert sizes D to H), it is highly recommended to start with feed and speed values reduced by 15% less than above data.

For 4 x D and 5 x D, it is recommended to reduce feed rate during entry and exit by 30–50%.

WGC

THE MOST VERSATILE TOOL IN THE
MARKET FOR GROOVING, PROFILING,
AND CUT-OFF OPERATIONS

4 BENEFITS IN 1

VERSATILE

GROOVING, PROFILING,
AND CUT-OFF OPERATIONS

SIMPLE

EASY TO SELECT
AND APPLY

STABLE

TRIPLE-V SEATING FOR
SECURE CLAMPING

PRODUCTIVE

LOW CUTTING FORCES IN
THROUGH COOLANT FOR
BETTER CHIP EVACUATION

Grooving

First choice for external grooving applications in most workpiece materials.

Through coolant capability and efficient coolant delivery for enhanced productivity.

Available in integral and modular style toolholders.

Groove width: 2–10mm.

Cut-Off

Specially engineered chipbreakers for effective parting/cut-off and deep grooving.

Positive geometry for lower forces.

Secure seating offers greatest stability.

Groove width: 1,4–8mm.

Profiling

Full radius chipbreaker for multi-directional turning and generating complex profiles.

Rigid design ensures smooth surface finish.

Groove width: 2–8mm.

New precision ground grooving and cut-off inserts

Geometry & Grade	-	PT WU25PT
Speed (Vc) (m/min)	100	100
Spindle Speed n (RPM)	377	377
Feed (mm/rev)	0.05	0.05
Grooving Depth	10.2	10.2
Tool Life – No. of Components	5	6

Annual Savings 9%

WGC – QUICK FACTS

INSERTS

APPLICATION	TYPES	GROOVE WIDTH	INSERT GEOMETRY	MATERIALS
Grooving		2.0mm–10.13mm .079–0.399"	PT-Positive Rake	
			PN-Negative Rake	
Cut-Off		1.4mm–8.0mm 0.055-0.315"	F-Fine	
			M-Medium	
			R-Rough	
Profiling		2.0mm–8.0mm 0.079-0.315"	PC-Full Radius	

APPLICATIONS

GEOMETRY

4 BENEFITS IN 1

Versatility

Single-sided, versatile grooving and cut-off solution with smooth surface finish

Productivity

Through coolant capability with precise delivery for low cutting forces and better chip evacuation

Stability

In challenging applications due to V-shaped edges

Simplicity

Easy to select and apply

INDUSTRY

How Do Catalogue Numbers Work?

Each character in our catalogue number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

WG0312M03U02PT

Grades and Grade Descriptions

Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous
S	High-Temp Alloys
H	Hardened Materials

wear resistance ← → toughness

Coating	Grade Description		05	10	15	20	25	30	35	40	45		
 <p>WU10PT</p>	<p>Composition: An advanced multilayer PVD coating over a very deformation-resistant unalloyed carbide substrate. The new and improved coating improves edge stability with wide range speed and feed capabilities.</p> <p>Application: The WU10PT™ grade is ideal for finishing to general machining of most workpiece materials at a wide range of speed and feed capabilities. Excellent for machining most steels, stainless steels, cast irons, non-ferrous materials, and super alloys with improved edge toughness and higher cutting speed/feed capability.</p>	P

		K											
		N											
		S											
		H											
 <p>WU25PT</p>	<p>Composition: An advanced PVD-TiAlN-coated grade with a tough, ultra-fine grain, unalloyed substrate.</p> <p>Application: For general-purpose machining of most steels, stainless steels, high-temperature alloys, titanium, irons, and non-ferrous materials. Speeds may vary from low to medium and will handle interruptions and high feed rates.</p>	P

		N											
		S											
		H											
 <p>WU35PT</p>	<p>Composition: A multilayer PVD coated carbide grade with an advanced AlTiN-TiN coating over a super-tough substrate.</p> <p>Application: WU35PT is an excellent grade for machining stainless steels, all types of steels, super alloys in turning, and cut-off applications. The substrate provides improved toughness while the coating layers offer excellent abrasion resistance and dependability at a wide range of speeds and feeds. Improved edge toughness provides security in interrupted cuts.</p>	P

			6	0,21	0,05	0,10	0,15	0,20	0,25	0,30	0,35	0,40
			8	0,23	0,05	0,10	0,15	0,20	0,25	0,30	0,35	0,40

NOTE: For cut-off inserts with a lead angle, maximum feed rate should be reduced by up to 40%.

Maximum Feed Rate Values

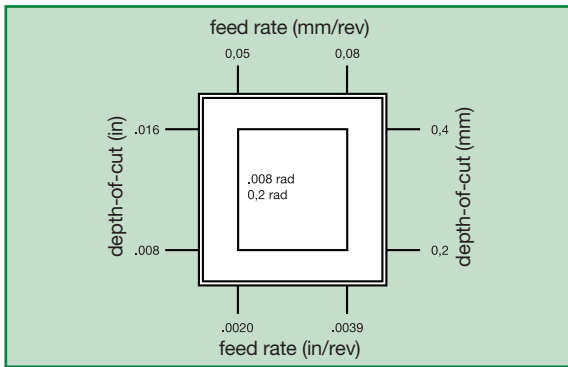

Data above is for P and K material groups. Maximum feed rates should be adjusted by multiplying max feed rate values by following factors for shown material groups.	Material Group	Feed Factor
	M	0.8
	N	1.2
	S	0.8
	H	0.5

I.D. and Face Grooving
For I.D. and face grooving applications, reduce feed rate by 20%.

Turn and profile feed rates

Individual Kit Component List

order number	catalogue number	description
6145374	1-16NPTF-JIC	Straight fitting, 1/16 NPTF male thread to JIC male thread
6145375	1-8NPTF-JIC	Straight fitting, 1/8 NPTF male thread to JIC male thread
6145378	M8X1.25-JIC	Straight fitting, M8 x 1.25 male thread to JIC male thread
6475041	M8X1-JIC	Straight fitting, M8 x 1.0 male thread to JIC male thread
6145376	G18-JIC	Straight fitting, G 1/8 male thread to JIC male thread
6145377	M10X1.5-JIC	Straight fitting, M10 x 1.5 male thread to JIC male thread
6145379	JICM-JICF-ELB	Elbow fitting, male JIC thread to female JIC thread
6145380	COOL-HOSE-200-HD	Heavy Duty 200mm Coolant hose with JIC female fitting both ends
6145381	COOL-HOSE-300-HD	Heavy Duty 300mm Coolant hose with JIC female fitting both ends
6432549	COOL-HOSE-200-FLEX	Flexible braided 200mm Coolant hose with JIC female fitting both ends
6432550	COOL-HOSE-300-FLEX	Flexible braided 300mm Coolant hose with JIC female fitting both ends
6475043	M8X1-BAN-JIC-HOSE-200	Flexible braided 200mm Coolant hose, M8 x 1.0 male thread to JIC female thread. Contains (1) M8x1.0 banjo bolt and (2) M8 bonded washers
6475045	G18-BAN-JIC-HOSE-200	Flexible braided 200mm Coolant hose, G 1/8 male thread to JIC female thread. Contains (1) G 1/8 banjo bolt and (2) G 1/8 bonded washers
6475047	M8X1-BAN-JIC-HOSE-300	Flexible braided 300mm Coolant hose, M8 x 1.0 male thread to JIC female thread. Contains (1) M8x1.0 banjo bolt and (2) M8 bonded washers
6475049	G18-BAN-JIC-HOSE-300	Flexible braided 300mm Coolant hose, G 1/8 male thread to JIC female thread. Contains (1) G 1/8 banjo bolt and (2) G 1/8 bonded washers

Individual Kit Component List

The items shown below are not part of any coolant kits shown on previous pages.

order number	catalogue number	description
6145382	M6X1-JIC	Straight fitting, M6 x 1.0 male thread to JIC male thread
6145383	JICM-JICM-STR	Straight fitting, JIC male thread to JIC male thread
6145386	G14-G18-RED	Straight fitting, G 1/4 male thread to G 1/8th male thread
6475058	R18-JIC	Straight fitting, 1/8 BSPT male thread to JIC male thread
6475059	R14-JIC	Straight fitting, 1/4 BSPT male thread to JIC male thread

Coolant Spare Parts

Included in kits; part of components.

order number	catalogue number	description
6475051	M8X1-BAN-BOLT	Banjo bolt, M8 x 1.0 male thread
6475053	G18-BAN-BOLT	Banjo bolt, G1/8 male thread
6475060	M6-BON-WASHER	M6 bonded washer
6475055	M8-BON-WASHER	M8 bonded washer
6475061	M10-BON-WASHER	M10 bonded washer
6475056	G18-BON-WASHER	G 1/8 bonded washer

Grooving and Cut-Off • WGC

Internal Coolant Delivery Guidelines

1. WGC system capable of 5076 psi (350 bar).
2. Toolholder delivered with four entry holes.
3. A quality filtration system is necessary to prevent blockages in the toolholder that will affect coolant flow and performance.
4. Machines without a proper filtering system may require modification or an inline filter.
 - For pressure >1015 psi [70 bar], use 10–20 µm filter.
 - For pressure <1015 psi [70 bar], 50–100 µm.
 - Using fine filters in low-pressure applications may affect flow rate.

General Safety Guidelines

1. All safety doors and mechanisms must be in place before trying out the internal coolant to avoid any danger to the operator in the event of a failure.
2. Use the correct pipe fittings to connect the holders to the system. Ensure the maximum pressure recommended for the fittings are not exceeded.
3. While implementing pressure >1160 psi [80 bar], increase the pressure in steps to ensure proper functioning of insert clamping and leak-free joints.
4. While indexing inserts, ensure the pocket is free from chips and/or dirt. Also, inspect the insert and make sure there are no blockages in the coolant canal.
5. Periodically check all hoses and fittings for damage and wear for proper functioning of the system. This check should also include filters.

Internal Coolant Delivery Performance

Internal coolant offers a clear advantage in tool life and chip forming/evacuation vs. external coolant in difficult conditions and in high-pressure coolant.

Example: Chipbreaking in plunging of steel.

Flood Coolant

Material steel ST52;
Insert size 6mm; f = 0,25 mm/U

Internal Coolant

1,087 psi
(75 bar)

2,900 psi
(200 bar)

Low Pressure — If performance is at risk due to low coolant pressure, apply internal coolant in combination with external coolant to increase volume.

Recommendation to improve tool life and/or productivity: Apply high pressure coolant: 80–350 bar recommended.

VDI Assemblies

The WGC internal coolant delivery can be leveraged with VDI holding systems with both traditional or Quick-Change coolant connections.

WK15CT

NEW VICTORY™ GRADE
FOR CAST IRON TURNING

Coating

NEW: Substrate and Victory™ coating.

Multilayer CVD coating of TiCN and Al₂O₃ with pre and post-coat treatment providing improved edge toughness and long predictable tool life at elevated cutting speeds.

Machining Capabilities

Developed to perform in roughing, semi-finishing, and finishing in all types of grey cast iron.

Also suitable for: Different types of nodular iron

WK15CT in cast iron turning not only helps in cost reduction, but also cycle time reduction through improved cutting parameters and better productivity.

WK15CT

High-Performance Inserts • WIDIA™ Victory™

WK15CT provides consistent performance at high cutting speeds and feeds in machining grey cast iron and ductile irons in roughing to finishing applications.

Features:

- Improved productivity and reduced cycle times.
- Post-coat grinding provides secure seating surface.
- A multi-layer CVD coated grade with TiN-TiCN-Al₂O₃ over a wear-resistant substrate specially developed to give consistent performance and superior tool life while machining cast irons.
- The wear-resistant substrate resists deformation while machining at elevated cutting speeds.
- The thick CVD coating with post-coat treatment provides long and consistent tool life.
- Can be applied in both continuous and lightly interrupted cuts for grey and ductile irons.

Post-coat treatment improves edge toughness and provides long predictable tool life.

TiN-TiCN-Al₂O₃

Wear-resistant coating provides better tool life at elevated cutting speeds.

WK15CT replaces the old grades TN5120, HK150. Available in most popular geometries in both negative and positive ISO insert styles.

WIDIA™ Tools for Railway Wheel Machining

WIDIA offers toolholders and indexable inserts for all types of wheel lathes being used in the Industry.

- The tooling for wheelset reprofiling/reconditioning has been developed in close cooperation with machine tool builders and railway workshops.
- The wheel profile wears during usage and also due to skidding, mismatched wheels, etc.
- Different chipbreaker profile and grades are available to machine the wheels with different wear condition.
- The upended design of inserts enhances the insert strength and the chipbreakers are designed to provide optimum performance with efficient chipbreaking while machining the profile.
- The toolholders adopt the robust lever clamping system.

WIDIA tooling solutions for heavy-duty turning have a proven history of success in these extremely demanding applications around the world. Customers looking for maximum material removal and improved productivity can rely on WIDIA to provide the right tool, inserts, and grades for their workpiece, machine tool, and applications.

WIDIA™ Tools for Bar Peeling Applications

Bar peeling is a unique and economical machining operation for the production of cylindrical surfaces on blank bars (e.g., round bars, wires, blocks, and pipes) with high surface finishes and dimensional accuracies.

During the bar peeling process, scales, cracks, and sand inclusion are removed. Bar peeling is faster than conventional turning. Used when high volumes, high quality, and high productivity with good surface finish are required.

New bar peeling machines demand high performance from cutting tools. WIDIA offers a wide variety of inserts in different grades for cost-effective bar peeling operations in different types of steels, stainless steels, etc. WIDIA also offers toolholders and cartridges for bar peeling as a custom solution.

- Ideal in high feed rate applications, WIDIA bar peeling tools enable economical machining operations for the production of cylindrical surfaces on bright bars.
- High surface finishes, dimensional accuracy, and most efficient removal of scales, cracks, sand enclosures, and other errors.

Application Range of WIDIA™ Bar Peeling Tools

Bar peeling machines require a high level of utilisation and demand high performance from the cutting tools. WIDIA offers specially developed WIDIA tools with indexable inserts for bar peeling, which are capable of meeting these demands, making manufacturing more cost-efficient.

WIDIA Victory™ CVD Coated Grades

WP15CT

Coated carbide. MT-CVD/CVD — TiN-TiCN-Al₂O₃-ZrCN. Good balance of wear resistance and toughness properties. High productivity machining on smooth to lightly interrupted cuts. For steels.

WP25CT

Coated carbide. MT-CVD/CVD — TiN-TiCN-Al₂O₃-ZrCN. Good toughness properties. Excellent first choice for steel machining, high productivity metal removal for all but the harshest interrupted cuts.

WP35CT

Coated carbide. MT-CVD/CVD — TiN-TiCN-Al₂O₃-ZrCN. Proven on all roughing and heavy roughing operations, wet or dry, on interrupted and uninterrupted cuts.

WM25CT

Coated carbide. MT-CVD/CVD — TiN-TiCN-Al₂O₃-ZrCN. Good balance of wear resistance and toughness properties. Light and medium machining. For austenitic stainless steel AISI series.

For more information on heavy-duty tooling, contact your local sales representative.

Customer Application Support (CAS)

Get fast and reliable answers to your toughest metalcutting problems.

Our Customer Application Support (CAS) Team is the metalworking industry's leading help desk resource for tooling application solutions and problem resolution.

- Easy access to proven metalworking expertise.
- Service level excellence.
- Best-in-class application support tools and technology.

Easy access to proven metalworking expertise!

WIDIA™ Customer Application Engineers assist customers and engineering groups throughout the world with expert tool selection and application recommendations for the entire range of WIDIA tooling.

Service Level Excellence:

- Fast telephone response.
- Quick technical solutions.
- Efficient case management.

Services Provided:

- Tooling selection.
- Operating parameters.
- Troubleshooting.
- Process optimisation.
- Hardware support.

Best-in-Class Support Tools and Technology:

- Tooling performance experts.
- Materials database.
- Application calculators.

Find your Local WIDIA Authorised Distributor

WIDIA™ brand cutting tools are available exclusively through a specialised network of Authorised Distributor partners whom you can count on to deliver much more than products. Our distributors know us, and more importantly, they know you. They know better than anyone in the industry how to put the global power of WIDIA to work for you — in your industry, in your region, and for your business.

WIDIA distributor partners provide technical expertise that you can count on. They will show you how to:

- Significantly reduce cycle time.
- Improve machine tool utilisation.
- Achieve measurable productivity improvements.
- Take advantage of proven supply chain solutions.
- Access local inventory and best-in-class technical support.
- Request onsite demonstrations of the latest tooling technology.

And with thousands of turning, milling, holemaking, tapping, and tooling systems products available from WIDIA, you'll find everything you need from one single source.

Find your Local WIDIA Authorised Distributor by accessing our distributor finder at widia.com.

IMPORTANT SAFETY INSTRUCTIONS: READ BEFORE USING THE TOOLS IN THIS CATALOGUE

METALCUTTING SAFETY

Projectile and Fragmentation Hazards

Modern metalcutting operations involve high spindle and cutter speeds and high temperatures and cutting forces. Hot metal chips may fly off the workpiece during metalcutting. Although cutting tools are designed and manufactured to withstand high cutting forces and temperatures, they can sometimes fragment, particularly if they are subjected to over-stress, severe impact, or other abuse.

To avoid injury:

- Always wear appropriate personal protective equipment, including safety goggles, when operating metalcutting machines or working nearby.
- Always make sure all machine guards are in place.

Breathing and Skin Contact Hazards

Grinding carbide or other advanced cutting tool materials produces dust or mist containing metallic particles. Breathing this dust or mist — especially over an extended period — can cause temporary or permanent lung disease or make existing medical conditions worse. Contact with this dust or mist can irritate eyes, skin, and mucous membranes and may make existing skin conditions worse.

To avoid injury:

- Always wear breathing protection and safety goggles when grinding.
- Provide ventilation control and collect and properly dispose of dust, mist, or sludge from grinding.
- Avoid skin contact with dust or mist.

For more information, read the applicable Material Safety Data Sheet provided by WIDIA and consult General Industry Safety and Health Regulations, Part 1910, Title 29 of the Code of Federal Regulations.

These safety instructions are general guidelines. Many variables affect machining operations. It is impossible to cover every specific situation. The technical information included in this catalogue and recommendations on machining practices may not apply to your particular operation.

For more information, consult the WIDIA Metalcutting Safety booklet, available free from WIDIA at +1 724 539 5747 or fax +1 724 539 5439. For specific product safety and environmental questions, contact our Corporate Environmental Health and Safety Office at +1 724 539 5066 or fax +1 724 539 5372.
