

Refractometer

Art. RHB-32

AHB introduces an improved design of **Hand-held Refractometers**.

The new features include:

- A larger scale for easier interpretations of readings.
- The new larger barrel design supplies a more comfortable and secure grip.
- One-piece daylight plate offers greater durability and quick, easy snap-in replacement.
- Integrated foot rest allows the unit to be placed surely on any flat surface.
- New body design includes a small hole for hanging the Refractometer on a hook or attaching a lanyard.
- All units include a durable, hard shell case.

The combination of a new larger scale, an oversized glass prism, and the translucent blue background produce simple, repeatable measurements with only a few drops of solution. This serviceable instrument features an all-metal body to ensure a long life. The one-piece daylight plate can be easily replaced if it breaks.
