

SAVE TIME AND MONEY USING OUR SUMP SHARK® SUMP CLEANERS.

Clean dirty sumps and filter fluids faster, better & safer.

Protect your workforce. Ditch the grueling pail-and-shovel. Stop spending money replacing burnt out wet-dry vacuums. Put an end to limited homemade contraptions.

Sump Sharks help customers cut operating expenses and increase their bottom lines.

Less machine downtime, labor and mess.

Less fluids used; therefore, less disposal (and more "green").

Less costs = more savings!

Check out the following **real-world savings** from a manufacturing customer. They **saved over \$8,000 per month** – more than enough to pay for the Shark within the first month.

	Before	After	Savings per Month
Downtime	65 hours	6.5 hours	58.5 hours
Labor Costs	\$10/hr. @ 780 hrs. = \$7,800 annually \$650 monthly	\$10.00/hr. @ 78 hrs. = \$780 annually \$65 monthly	\$585
Coolant Used	960 gallons	240 gallons	720 gallons
\$ Lost to Machine Downtime	\$2,925	\$293	\$2,633
Coolant Costs	\$6,720	\$1,680	\$5,040
Disposal Costs	*	*	*
Total Costs	\$10,295	\$2,038	\$8,258

*Disposal costs were unavailable. The decrease in amount of fluids used would lower disposal costs thereby producing even more savings.

WHY CECOR SUMP SHARKS?

Sump Sharks are high-suction sludge vacuums that remove collected industrial fluids and solid from reservoirs (sumps, pits, etc.) during various commercial, industrial and metalworking processes in minutes.

- **Experience** – CECOR has designed and manufactured sump cleaners since 1955 (longest in the industry).

- **Quality, Durable Workmanship** – Our products are proudly made in the USA. We use only high-quality components such as long-wearing, chemically-resistant industrial pumps, hoses, valves and wheels.

- **Patented Filter Advantage** – Our filter system separates solids from fluids. In many applications, the filtered fluids can then be re-used.

- **Designed for Power & Speed** – Our Sharks have the deepest vacuums with some units reaching 26" of mercury (350" water). Our powerful vacuums pump sludge and swarf fast that other vacuums cannot touch.

- **Variety** – CECOR offers assorted tank capacities, power sources, filters, transport systems and options.

THERE'S A SHARK FOR EVERY TYPE OF APPLICATION.

CECOR offers a wide range of Sump Shark® models. Let our experts assess your specific application and make recommendations.

Applications that benefit from Sump Sharks include, but are not limited to general machining, screw machines, grinding, honing, water jet cutting, plasma cutting and more.

Match a Sump Shark to fit your needs:

Configurations

- Single tank sump cleaner with filter
- Combo tank sump cleaner with filter & coolant dispenser
- Coolant dispenser

Power sources

- Air-Operated • Electric (Single- or Three-Phase)
- Propane

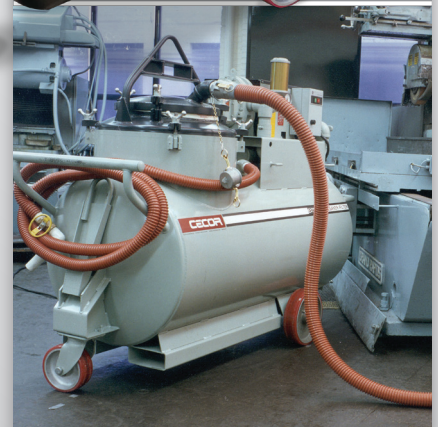

Tank capacities

- Single tanks range from 60-600 gallons
- Combo tanks range from 60/60 – 300/300 gallons

Transport options

- Push handle and tow bar • Push handle and fork pockets
- Tow bar only • Flat deck base for mounting

CECOR provides a full line of parts and accessories.

CECOR TOUGH

CECOR also designs and manufactures industrial carts and containers.

SUMP SHARK FILTER ADVANTAGE

Don't just shop the lowest micron number. Too fine of a filter in the wrong application can reduce (or even stop) pumping flow. Some manufacturers tout low micron numbers, but because of defective design, unintended particles pass through the filter.

CECOR designed a filter based on the concept of "caking." As dirty fluids pass through the filter, solids build up on the filter forming a "cake," which enables the filter to trap even finer particles.

Ask us about our innovative discharge filter for even finer filtering.
