# Material Handling Solutions

DuBois Chemicals is a recognized leader in the coatings removal industry. In addition to material handling solutions, DuBois offers thermal and chemical coatings removal of paint fixtures and for production part recovery. Our design engineers are available to work with you on custom solutions for hooks, fixtures, and material handling. Our unique combination of offerings makes us a key partner in the finishing process for hundreds of companies. Most importantly, DuBois has an unwavering commitment to the environment. Our testing, documentation, and waste disposal procedures are unparalleled among coatings removal companies. Our customers enjoy a unique “peace of mind” now and in the future.

## Material Handling Carts

DuBois can increase efficiency in your manufacturing facility with universal material handling carts. Many carts do not flex well between parts, departments, or plants. Implementing our material handling solutions will allow you to optimize the number of carts, share them, and repurpose them in the future to save you money. Our flexible cart designs start with ergonomics for improved worker productivity and safety.

- Flexible: customize sizes to fit your needs!
- Ergonomic: easy to move!
- Safe: designed to push versus pull to reduce injuries!
- Dependable: proven durability!

## Coating Removal Services

Our Thermal Clean™ Process ensures complete coating removal. This means your parts and fixtures are returned 100% clean and free from ash, rust, or residue, within lead times as short as 24 to 48 hours. With unsurpassed quality, reliability, and customer service, DuBois is dedicated to helping you achieve a zero-defect finishing. Our coating removal process provides:

- Premium surface cleaning and preparation removing paint, powder coatings, e-coat, high-temperature coatings, varnish, rust, ink, lime, and oxides
- Cleaning of substrates including steel, stainless steel, spring steel, aluminum castings, brass, and copper.
- Separate processes used for paint hooks & production parts. This is the most efficient process to meet the unique needs of each product (no under baking or over baking) allowing for maximum care being taken to maintain the integrity of the part (no damage or warping).
- Utilization of custom designed carts to enhance productivity, minimize damage, and improve material handling of paint hooks, fixtures, and racks.

## Paint Line Racks & Hooks

Our paint line tooling, racks and hooks maximize paint line efficiency and minimize rejects. All manufacturing is done by experienced fabricators and certified welders offering you quick turnaround to ensure rapid response to your model changes. DuBois designs high density carts and carriers to benefit every stage of your fixture cleaning and loading processes:

- Reduce cleaning costs through maximum fixture count per cart!
- Save money with decreased damage to fixtures, hangers, & racks!
- Timely repair services to keep your carts looking & performing like new!
