

Hello,

Cleaning and maintaining the units is fairly easy.

1. Turn the unit off and disconnect from power source
2. Remove all cells-prefilter and electrostatic cells
3. These can be washed in several ways
 - a. Dip tank- with degreaser. Mistbuster recommends their product "Mistbuster Total Oil Cleaner" we can quote if you like. Simple Green, Super Clean or any other HD degrease also will work well
 - b. Parts washer
4. After washing each stage needs to dry completely-I would suggest 24 hours
5. Inspect thin wires and replace if broken
6. Wipe out cabinet
7. Reinstall cells
8. Power up

I have attached a video for your review. It has a lot of information.

Call we if you would need any more help.
