

SHARPERTEK™

Single Tank Power Lift PARTS CLEANER

Ultrasonic Cleaning

Ultrasonic power produces waves of compression and decavitation when the molecules in the solution are separated causing tiny implosions and microscopic scrubbing. An absolute state-of-the-art, superior way of cleaning is provided due to the quick process and the ability of the ultrasonics in the confined tank to build so thoroughly.

“The best way to clean heavy complex-shaped parts”

- GUS

Smart Filtration System

The solution is continually filtered throughout the cleaning process. The entire volume of the cleaning chamber is turned over more than twice a minute. This fast re-circulating turnover rate flushes away chips, soils, and oils, always keeping fresh, clean solution in contact with the parts.

Easy Chip Removal

The cleaning chamber bottom is pitched from three sides for 100% quick drainage and chip removal. Chip strainer baskets are included for the tanks. All returning solution is filtered through these baskets to keep the storage tanks chip-free. Solution tanks do not have to be emptied to clean the strainer baskets.
