

Mubea Ironworkers

Over the past eighty years "Mubea Systeme" mechanical and hydraulic ironworkers have established themselves as a world leader. The reason is simple: Top Notch construction of German Precision Design and High Quality Craftsmanship. Numerous specialty accessories, special designed support tables, PLC & CNC gauges and safety devices reduce set-up time and increase production.

This Mubea Ironworker is a step above all existing ironworkers and is money well spent due to the latest innovations and available technology.

The standard quick-change punch (no wrench required to interchange punches) is a great advantage to drastically reduce set up times. Further, our standards such as oil lubrication, heavy duty designed quick adjustable strippers, support tables, the largest angle station capacity and bigger throats make the Mubea the best-equipped ironworker today on the market. There are over 60,000 Mubea machines world wide in operation.

We offer outstanding quality and value to our customers backed by excellent service and a spare part department located in Houston, TX.

The Best on the Market
