

MANUFACTURING & ENGINEERING SOLUTIONS

DRIVING YOUR BUSINESS

5-AXIS UNIVERSAL MACHINING

Jupiter's 5-axis universal machining centers come in both trunnion and gantry configuration. From the castings to the spindle bearings, Jupiter selects only the highest quality components to guarantee many years of flawless mold-making, aerospace, automotive, and other parts.

Ultra-precise, Powerful, Compact

TURNING & MILLING

Jupiter's multi-function lathes provide precision turning and automation with ironclad reliability. Hardened Meehanite castings and hand-scraped box ways give you the rigidity you need to consistently take aggressive cuts and minimize cycle times. Bar feeders, sub-spindles, pushers, and parts catchers make integration into lights-out production environments effortless and worry-free.

HORIZONTAL MACHINING

For complex parts with multiple operations and large batch production, upgrade to a Jupiter horizontal machining center today. Jupiter HMCs pack power and finesse into compact footprints. Hydraulic linkages in each pallet support advanced tombstone configurations. Built-in spindles with Japanese motors and bearings ensure rapid cycle times.
