

**Diameter Range:**  
 Ø .098" - 106.299"  
 (2.5mm - 2700mm)

**Connection Size**  
 MHD-32, MHD-40, MHD-50,  
 MHD-63, MHD-80  
 Fully compatible with  
 existing MHD product line

**Precision / Accuracy**  
 .0001" (.002mm)  
 Direct measurement system  
 displays actual movement of slide

## Digital Finish Boring Head with .0001" (0.002mm) Ø Setting Accuracy

The TRE fine boring head family is a system in which the radial slide traverse is now viewable on a built-in digital display, ensuring the ability to adjust quickly, precisely and accurately. Unlike traditional fine boring heads that feature a dial adjusting mechanism, the TRE family features a direct drive measuring system that shows the exact measurement of adjustment. This is particularly helpful when overcoming fine adjustment backlash issues that cannot be seen with the naked eye. With the digital readout, what you see is what you get.

The entire TRE family is fully compatible with our existing MHD system, and can also be purchased in kit form.

### **General Features:**

- **NEW** TRE32 and TRE40 heads for diameters as small as 1.377"
- Minimal backlash compensation
- Single button operation for functions 'On', 'Reset', and to change between inch and metric
- Display resolution .0001" (.002mm)
- Energy saving function. Display switches off automatically after 30 seconds and stores last display value
- Internal coolant thru
- High level of resistance to dust and water rated at IP67

# OPERATING INSTRUCTIONS FINISH BORING HEAD with .0001" (0.002 mm) Ø Setting Accuracy

- 1 Expanding pin
- 2 Body
- 3 Adjustment disc
- 4 Slide toolholder
- 5 Tool bore Ø16H7
- 6 Toolholder locking screw
- 7 Coolant outlet
- 8 Slide locking screw ⚠  
(Unlock, adjust, lock.)
- 9 Battery cover
- 10 Oiling nipple
- 11 Digital display
- 12 Selection button
- 13 Slide adjusting range ⚠  
(Do not exceed the range marked.)
- 14 Cutting edge position mark

## ASSEMBLY - REFERENCE PREVIOUS PAGE FOR (#)

### ASSEMBLY

- Before mounting the TRE boring head, make sure that expanding pin (1), does not protrude from the cylindrical body part
- Insert TRE into the shank
- Tighten pin (1) by turning clockwise  
(Recommended torque: **30-35 Nm/ 22-25 ft. lbs.**)
- Insert the screw (6). If it protrudes, the sleeve should be rotated until the screw can enter the recess in the sleeve nut, reduction sleeve or boring bar.  
(Recommended torque: **35-50 Nm/ 22-25 ft. lbs.**)

### DISASSEMBLY

In order to separate the TRE from the shank, loosen the expanding pin (1) by turning counterclockwise.

### OPERATION

The tool slide (4) allows for a .1968" (5mm) adjustment, by turning adjusting disc (3) counterclockwise .

- Switch on the device by pushing the selection button (12).  
The display will show the value of the previous adjustment.
- To reset this value, push button (12) for 2 seconds.
- Unscrew the slide locking screw (8) ( **fig. a** ).
- Perform the adjustment. The display (11) shows the dimensional change to the previously set value or to "0", with a .0001" (.002mm) screen resolution ( **fig. b** ).
- After positioning, lock the tool slide with clamp screw (8).  
(Recommended torque: **1-1.2 Nm/ .73-.88 ft. lbs.**) ( **fig. c** )
- The display switches off automatically if the device is unused for more than 30 seconds.
- **Loosen screw (8) before making any slide adjustment!**

### SETTING inch (mm)

By pressing the selection button (12) for 10 seconds, the measurement unit changes from "mm" to "inch" and back. This process resets the value on the display.

### BATTERY CHANGE

In case of low battery the message "batt" appears on the display, please replace the batteries as soon as possible.

- Open battery cover (9) by loosening screws.
- Remove the batteries and dispose them correctly.
- Put in new batteries; make sure the positive and negative ends are facing the correct direction.
- Replace battery cover and fasten screws.  
(Use two SR44 1.55V batteries)

### MAINTENANCE

Weekly:

- Lubricate through the nipple (10) with ISO UN G220 oil.

### PERIODICALLY

- Clean and lubricate the conical and cylindrical matching surfaces.
- Treat expanding pin (1) with anti-friction lubricant.
- Clean and lubricate the tool slide guideway.

### IMPORTANT NOTES:

- Toolholder should be firmly affixed to the slide.
- **DO NOT perform any movement of the slide when the display (11) is switched off!**

**Failure to follow adjusting sequence pictured above will result in internal damage to the head and void the warranty.**
