PRODUCTS		DESCRIPTION	PAGE
	i-ONE DRILLS, CARBIDE INSERTS & HOLDERS	High Performance Exchangeable for General Steels and Cast Iron	A27
	i-DREAM DRILLS,CARBIDE INSERTS & HOLDERS	For General Steels and Stainless Steels	A47
	SOLID CARBIDE DREAM DRILLS - PRO (with & without Coolant Holes)	For General Purpose (HRc30 to HRc50) Extremely high hardness and heat resistance due to YG-1 special Z-Coating technology	A61
	SOLID CARBIDE DREAM DRILLS - GENERAL (with & without Coolant Holes)	For General Purpose(HRc30 to HRc45)	A73
	SOLID CARBIDE DREAM DRILLS - HIGH FEED (with Coolant Holes)	1.5 to 2 Times Faster Feeding Speed than 2-Flute Drill for Carbon Steels, Alloy Steels (up to HRc35) and Cast Iron	A109
	SOLID CARBIDE DREAM DRILLS - FLAT BOTTOM	For Holes on Various Angled Surfaces	A121
	SOLID CARBIDE DREAM DRILLS - INOX (with Coolant Holes)	For Tough Materials like Stainless Steels, Nickel Alloys and Titanium	A129
	SOLID CARBIDE DREAM DRILLS - ALU (with Coolant Holes)	For Aluminum and Aluminum Alloys	A149
	SOLID CARBIDE DREAM DRILLS - MQL TYPE (with Coolant Holes)	Minimum Quantity Lubrication Drilling Deep Holes (10×D ~ 30×D)	A157

PRODUCTS		DESCRIPTION	PAGE
	SOLID CARBIDE DREAM DRILLS for HIGH HARDENED STEELS (without Coolant Holes)	For High Hardened Steels (HRc50 to HRc70)	A177
	STANDARD SOLID CARBIDE DRILLS (JOBBER & STUB LENGTH)	For General Purpose, 118° Point	A183
	HSS-PM MULTI-1 DRILLS	Premium HSS-PM Drills For Wide Range of Applications Particularly Stainless Steels and Titanium	A189
	HSSCo8 & HSS-E HPD STRAIGHT SHANK DRILLS	High Precision Drilling for General Steels & Stainless Steels	A195
	HSS & HSS-E GOLD-P DRILLS	Same Performance as Full TiN-coated Drills	A203
	HSS, HSS-E & HSSCo8 STRAIGHT SHANK DRILLS	For General Purpose (Soft & Tough Materials)	A225
	AIRCRAFT DRILLS	6 and 12 inch Length Drills	A245
	SILVER & DEMING DRILLS	118° Split Point, 3 Flats Black and Gold	A257
	HSS & HSS-E MORSE TAPER SHANK DRILLS	Morse Taper Shank Drills for Wide Applications	A261

HOLEMAKING TOOLS

PRODUCTS		DESCRIPTION	PAGE
	SOLID CARBIDE & HSSCo8 NC-SPOTTING DRILLS	For Centering and Chamfering of Holes	A267
	SOLID CARBIDE & HSS COMBINATION DRILLS & COUNTERSINK / CENTER DRILLS	For Centering and Chamfering of Holes	A273
	SPADE DRILLS, INSERTS & HOLDERS	Carbide for Long Tool Life and HSS-PM for General Machines and Large Diameters Higher Productivity than Other Drilling Tools	A279
	SOLID CARBIDE & HSS REAMERS	Straight Shank Chucking Reamers Straight Flute	A351

THREADING TOOLS

PRODUCTS		DESCRIPTION	PAGE
	SOLID CARBIDE THREAD MILLS (with & without Coolant Holes)	Threading Large Diameter in High Quality Available with Chamfer	B45
	HSS-PM SYNCHRO TAPS (Spiral Flute, Spiral Point, Straight Flute & Cold Forming)	Spiral Point and Spiral Flute Taps For High Speed Tapping on Rigid CNC Machine	B65
	HSS-E COMBO TAPS (Spiral Flute & Spiral Point Tap)	For Multi-Purpose	B81
	HSS-PM YG TAP BLUE RING	For Steels & Stainless Steels up to 35HRc	B113
	HSS-E YG TAP STEEL	For Steel Materials but also other Long Chip Forming Materials	B131
	HSS-PM & HSS-E YG TAP INOX	For Stainless Steels with Lamellar, Irregular Chip Formation where the Cutting Forces are Higher	B149
	SOLID CARBIDE & HSS-PM YG TAP CAST IRON	For Cast Iron or Similar Work Materials	B171
	HSS-E YG TAP ALU	For long-chipping Aluminum Wrought Alloys with Large Chip Gullets to Avoid Clogging in the Threading Operations	B179
	HSS-PM YG TAP Ti Ni	For Heat Resistent Super Alloys and Titanium Alloys Applied with Cutting Edge Rake Angles and Thread Relief	B185

THREADING TOOLS

	PRODUCTS	DESCRIPTION	PAGE
	HSS-E YG TAP HARDENED STEEL	For Hardened Steels Applications to Control the Continuous and Red-glowing Chips	B191
	HSS-E & HSS YG TAP GENERAL	Suitable for Tapping Blind / Through Holes due to Flute Geometry and Excellent Chip Evacuation	B199
	HSS-PM, HSS-E & HSS YG TAP FORMING	Tapping by Forming Soft Materials	B261
	HSS-E & HSS SCREW THREAD INSERT TAPS	Tapping by Forming Soft Materials (No Chips)	B277
	HSS-E PIPE TAPS	Tapping Whitworth Pipe threads	B291

MILLING TOOLS

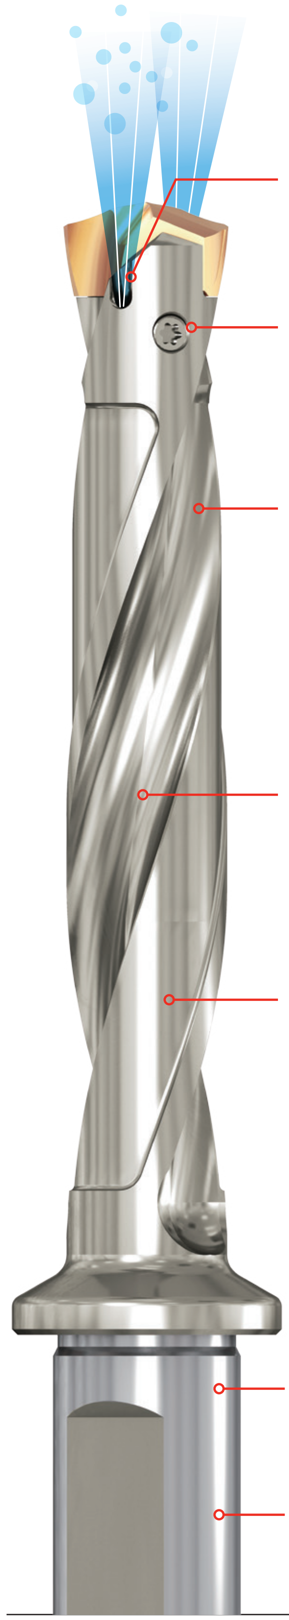
	COBALT & HSS END MILLS	General Purpose / Coating Available	C763

Global Cutting Tool Leader YG-1

i - ONE DRILLS

Micro Grain Carbide Inserts and Premium Tool Steel Holder with Coolant Holes

Cost Efficient High Performance Exchangeable Drilling Tools



Internal cooling channel for higher drilling performance

Torx Plus Screw for clamping insert

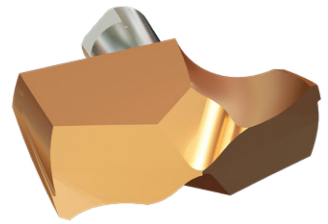
Optimized flute shape for better chip evacuation

Nickel-plated Steel holder for corrosion resistance and wear resistance

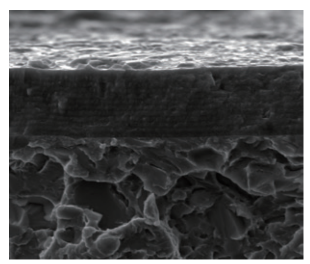
Body Clearance for elimination of undesirable contact with work piece

Ground bright finished shank for more precise clamping

Cylindrical shank with a parallel flat according to ISO9766 Plain shank and Whistle notch shank are available on request



- **Secure & Quick clamping system**
- **Multi layered 'H'-coating** reduces the cracking and provides higher shear strength while achieving excellent oxidation resistance and hot hardness



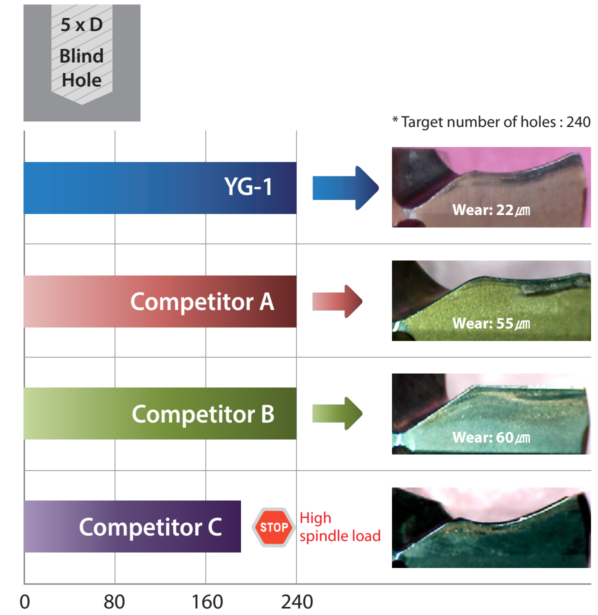
- **Optimized point geometry** of i-ONE Drills ensures centering ability and smoother cutting
- **Self Centering and Chip Breaking** by Radius Thinning
- **Ground Negative land** on cutting edge for Reliable Tool Life

i - ONE DRILLS

CASE STUDY

▶ Ø14.0mm, Alloy Steel

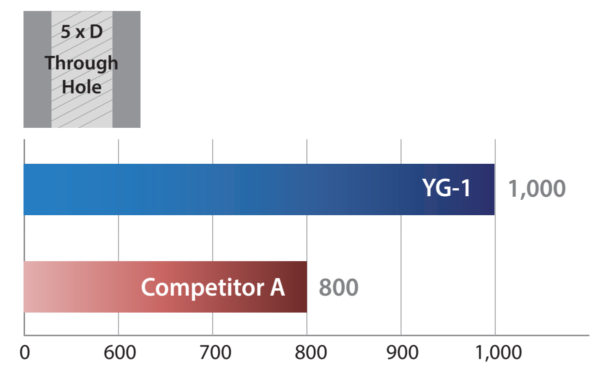
Tool	Y141H1400	Competitors
O.D Size (mm)	Ø14.0 (0.5512 inch)	
Work Material	-DIN: 42CrMo4 -AISI: 4140 -JIS: SCM440(HRc30)	
Cutting Speed	80 m/min. (262.5 ft/min.)	
RPM	1,819 rev./min.	
Feed	0.18 mm/rev. (0.0071 in/rev.)	
Drilling Depth	65.0 mm (5XD / Blind)	
Cooling Method	Internal Cooling (35 bar) Water Soluble (9% Emulsion)	
Machine	Machining Center	



Drilling Holes

▶ Ø16.0mm, Pre-Hardened

Tool	YG-1	Competitor A
O.D Size (mm)	Ø16.0 (0.6299 inch)	
Work Material	-DIN: CK45 -AISI: 1045 -JIS: S45C(HRc20)	
Cutting Speed	75 m/min. (246.1 ft/min.)	
RPM	1,493 rev./min.	
Feed	0.3 mm/rev. (0.0118 in/rev.)	
Drilling Depth	35.0 mm (Through)	
Cooling Method	Internal Cooling (10 bar) Water Soluble (9% Emulsion)	
Machine	Machining Center	

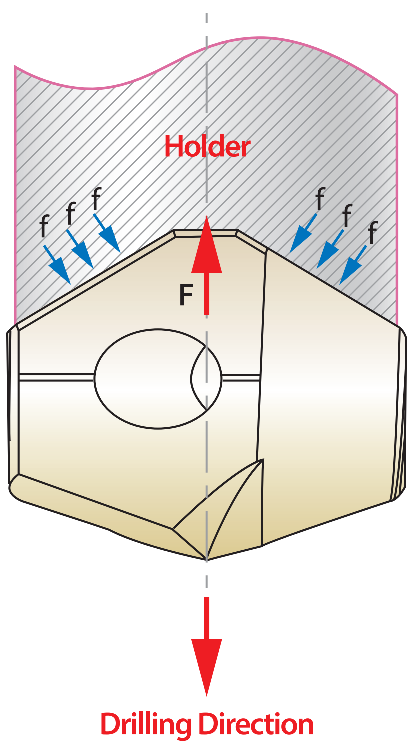


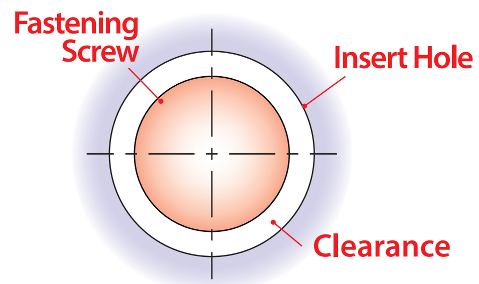
Drilling Holes

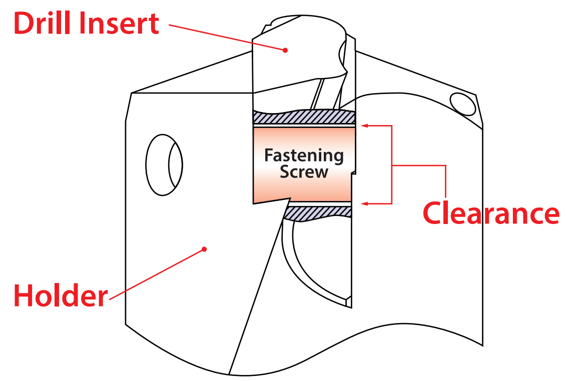
i - DREAM DRILLS

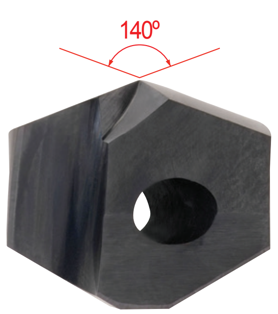
Stable Insert locking System

- V type locking system allowed for stabilized drilling
- Design that fastening screw doesn't touch insert to protect the insert locking system from the vibration during the drilling cycle









Self-Centering 140˚ Point & Helical Thinning

- Excellent Centering
- Minimized cutting resistance
- Design for maximum toughness, hardness and chip evacuation
- High penetration rate
- Reduced heat from cutting edge processing to allow long tool life
- Lower required torque and horsepower

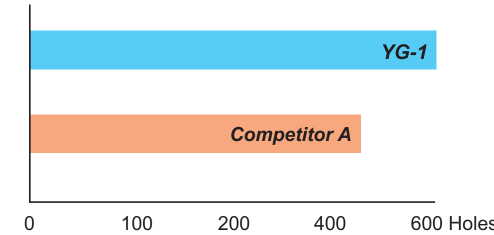
i - DREAM DRILLS

TEST I GENERAL

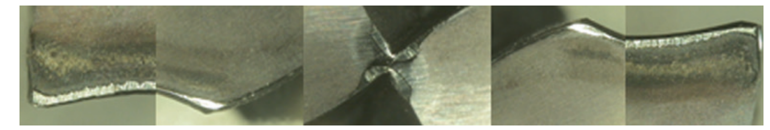
Cutting Condition

HOLDER	ZB0302
INSERT	Y03B07
Work Material	- ASTM : A36 - DIN : St37-2 - JIS : SS400
Cutting Speed	262 ft/min.
Feed	.0094 inch/rev.
Feedrate	16.59 inch/min.
RPM	1756 rev./min.
Drilling	1.89˝
Coolant	Internal
Machine type	Vertical Machining Center

RESULT



▶ YG-1 (Total Drilling 600 Holes)



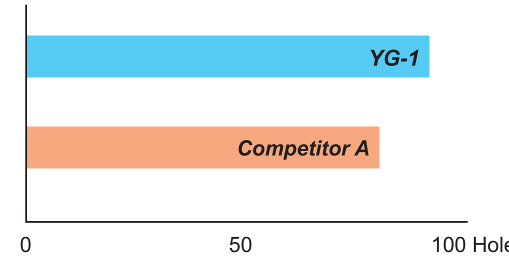
▶ Competitor A (Total Drilling 470 Holes)

TEST II INOX

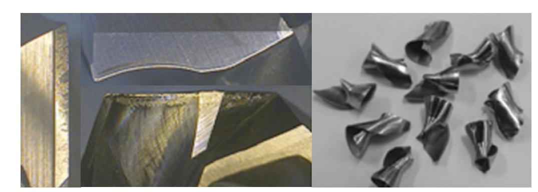
Cutting Condition

HOLDER	ZB0301
INSERT	YI3B01
Work Material	- AISI : 304 - DIN : X5CrNi189 - JIS : SUS304
Cutting Speed	180 ft/min.
Feed	.0059 inch/rev.
Feedrate	7.402 inch/min.
RPM	1,250 rev./min.
Drilling	1.97˝
Coolant	Internal
Machine type	Vertical Machining Center

RESULT



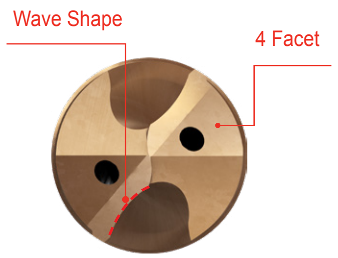
▶ YG-1 (Total Drilling 100 Holes)



▶ Competitor A (Total Drilling 80 Holes)

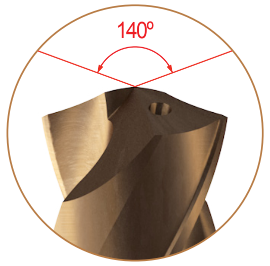
DREAM DRILLS PRO

Performance Upgrade with Faster Cutting Speed



Wave Shape Cutting Edge

- Improve chip formation
- Low Cutting Force

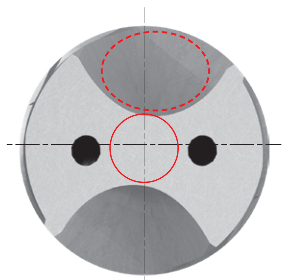


140 Degree Point Angle

- Provides edge strength and Exceptional tool life
- Good Self Centering
- Low Torque

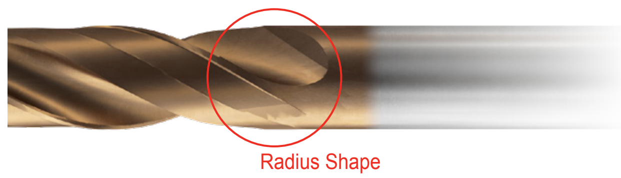
Micro-grained Carbide

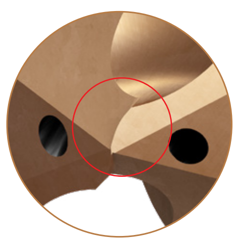
- Achieving Excellent Wear Resistance
- Maximum Tool Life and High Performance



Optimized wide flute design

The unique flute structure provides good surface finish, longer tool life and requires less cutting force





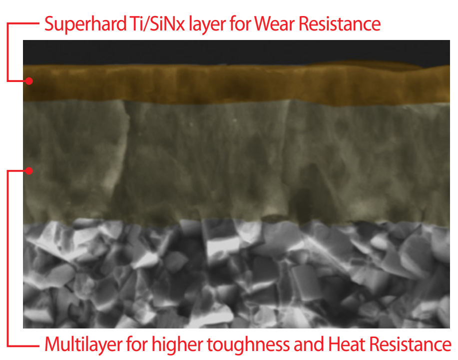
Helical Thinning

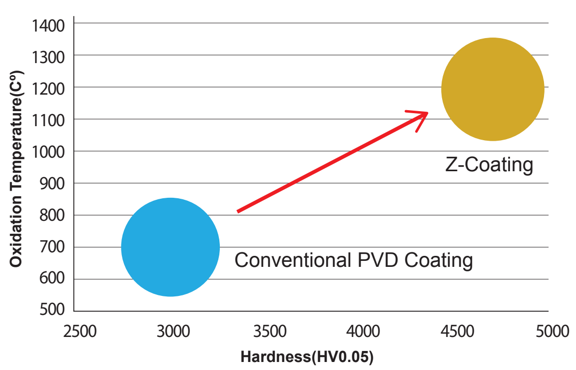
- Low Thrust
- Stable Torque
- Good Chip Breakage

Higher & Improved cutting conditions due to YG-1 Special Z-Coating Technology

(YG-1's Unique Silicon Based Coating: Nano-Layer Coating)

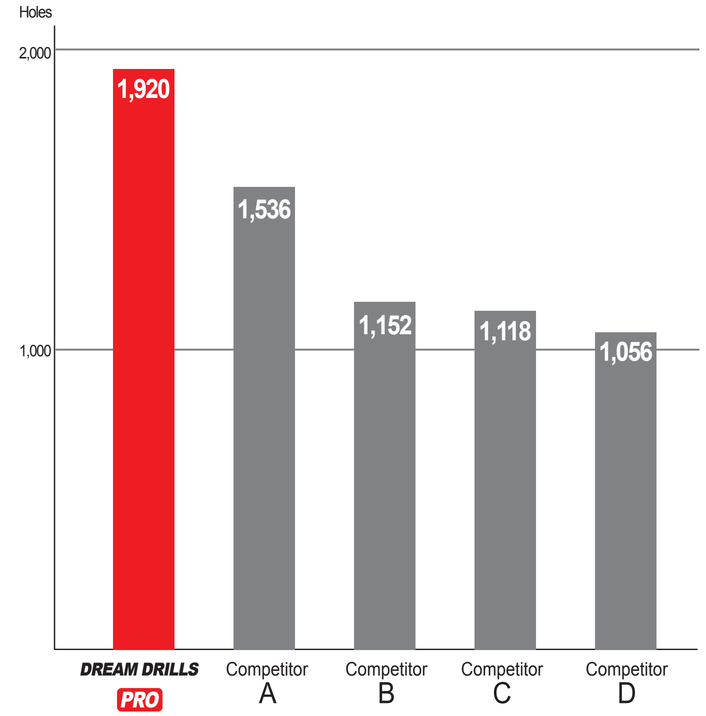
- Extremely High Hardness and Heat Resistance





DREAM DRILLS PRO

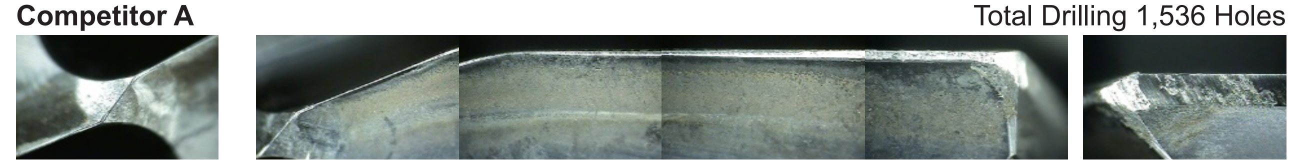
▶ SOLID CARBIDE DREAM DRILLS - PRO with Coolant Holes



Work Material	- ANSI: 4140 - DIN: 42CrMo4 - JIS: SCM440 Hardness: HRc30 (HB286)
O.D Size	Ø10.0 (.3937 inch)
RPM	4,458 rev./min.
Cutting Speed	140 ft/min.
Feed	0.012 inch/rev.
Drilling Depth	1.77" (4.5xD)
Coolant	Internal Cooling (20 bar) Water Soluble (9% Emulsion)
Machine	Machining Center

DREAM DRILLS PRO Total Drilling 1,920 Holes

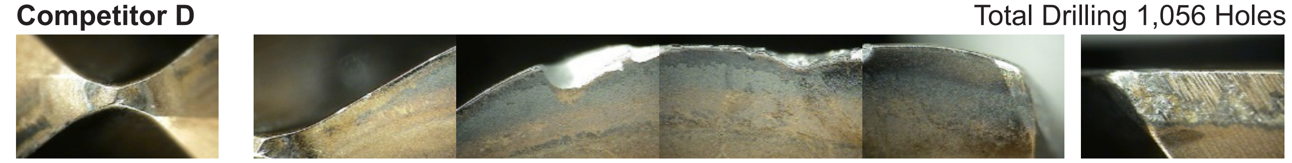
Competitor A Total Drilling 1,536 Holes



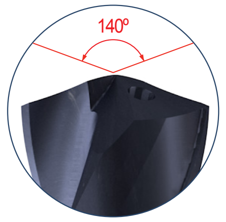
Competitor B Total Drilling 1,152 Holes

Competitor C Total Drilling 1,118 Holes

Competitor D Total Drilling 1,056 Holes

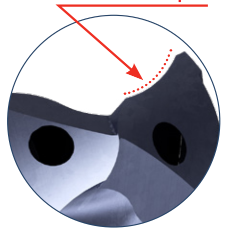


DREAM DRILLS - GENERAL



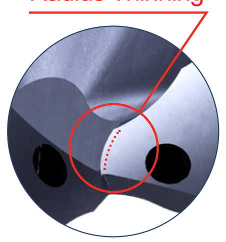
140 Degree Point Angle
for good centering and low thrust

Wave Shape

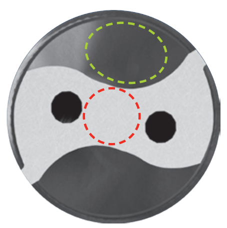


Wave shape Cutting Edge
will allow low thrust , stable torque and long tool life

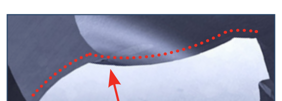
Radius Thinning



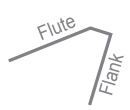
Radius Thinning
for Self Centering and Chip Breaking



Optimized flute shape
for strength of drill and smooth chip evacuation



Negative Land (Honing)



Negative land on the cutting edge
for Reliable Tool Life

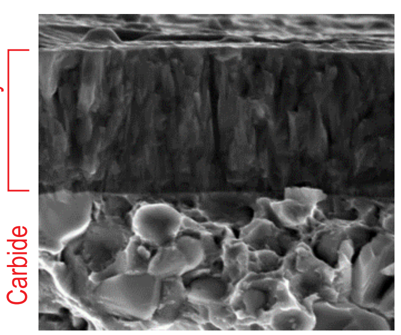
TiAlN Coating (Upgraded **Ti**tanium **Al**uminum **N**itride : **nano-Layer coating)**

- Higher wear resistance and Lower friction
- Higher Cutting Speed and Feed
- Improved drill Hole Quality

Special surface treatment after coating
to reduce friction and better chip flow.

Nano Layer

Carbide



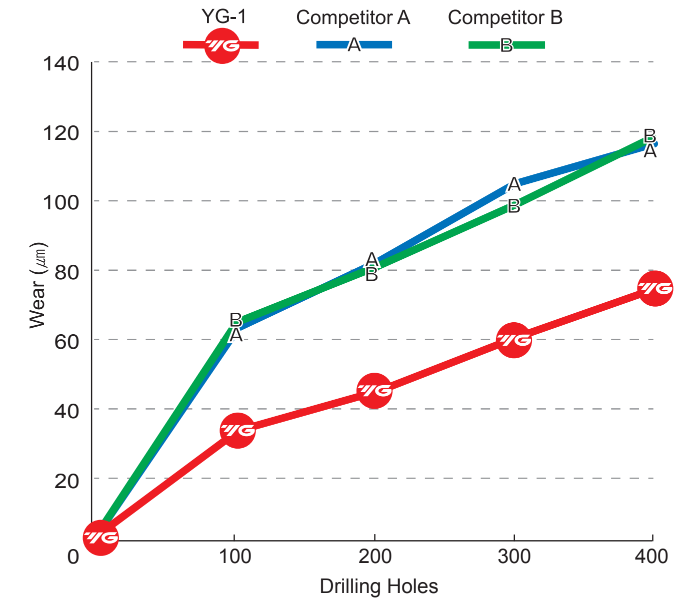
Micro-grained carbide for wear resistance and longer tool life

DREAM DRILLS - GENERAL

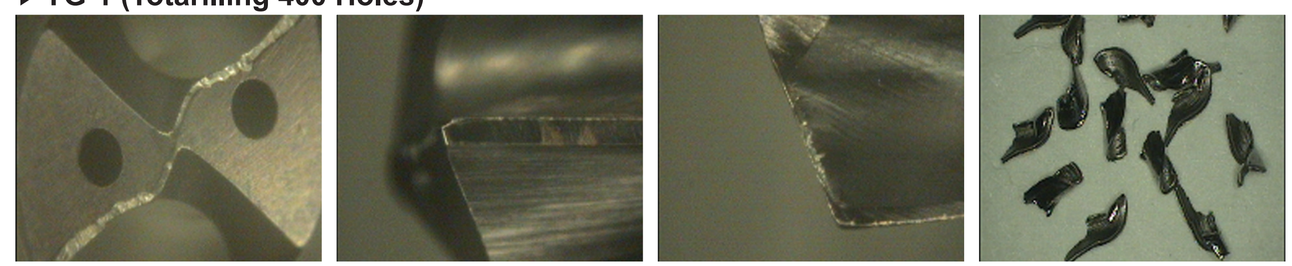
▶ SOLID CARBIDE DREAM DRILLS - GENERAL with Coolant Holes

Cutting Condition

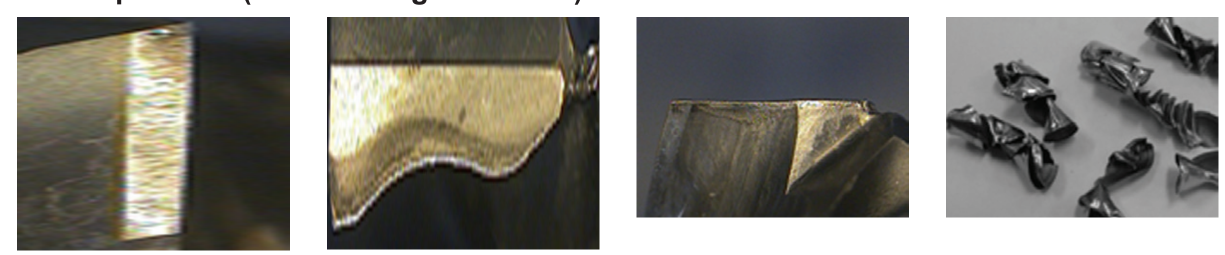
Tool	DH408015 (Dream Drill with Coolant Holes)
Size	Ø1.5 × 3 × 15 × 55
Work Material	- AISI : H13 - DIN : X40GrMoV51 - JIS : SKD61 - WR : 1.2344 (HRc30)
RPM	14,856 rev./min.
Feed	.0019 inch/rev.
Drilling Depth	.29" (5xD)
Coolant	Wet Cut



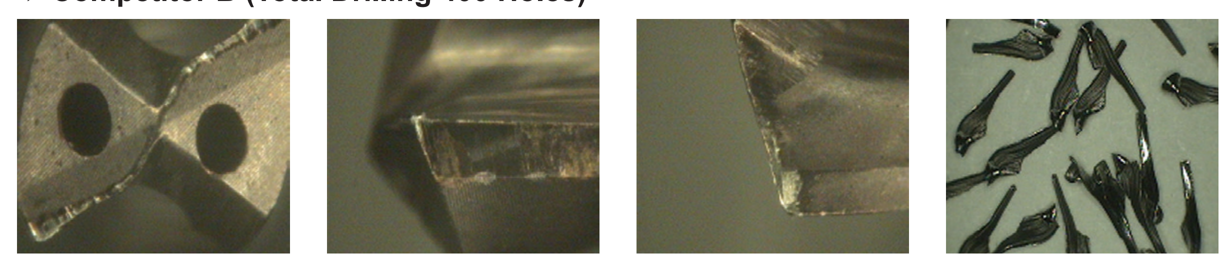
▶ YG-1 (Totarilling 400 Holes)



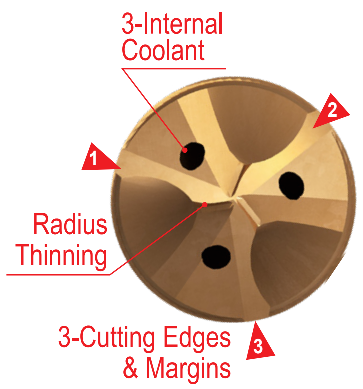
▶ Competitor A (Total Drilling 400 Holes)



▶ Competitor B (Total Drilling 400 Holes)

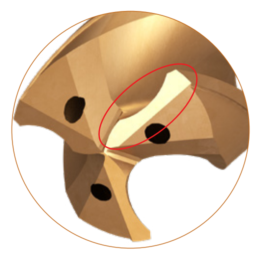


DREAM DRILLS - HIGH FEED



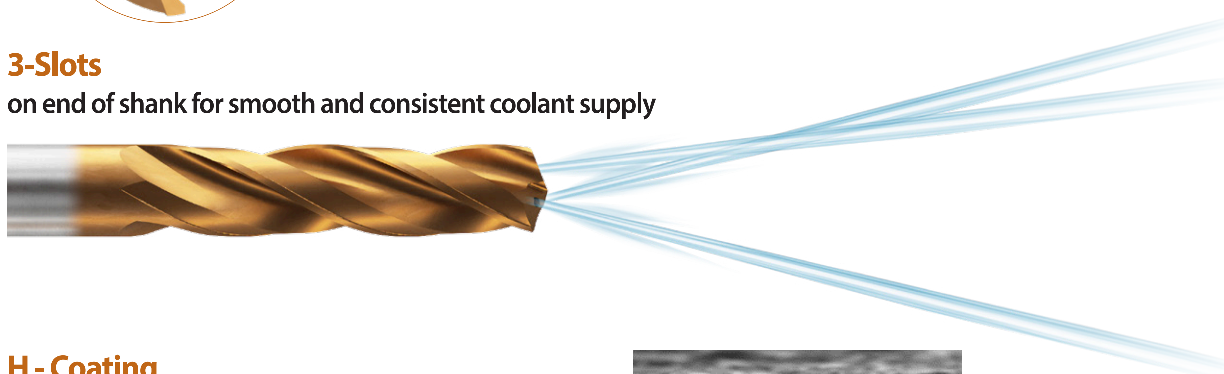
3-Cutting Edges & Margins
will allow high penetration rate, accurate holelocation and good surface finish

Radius Thinning for
Self Centering and Chip Breaking

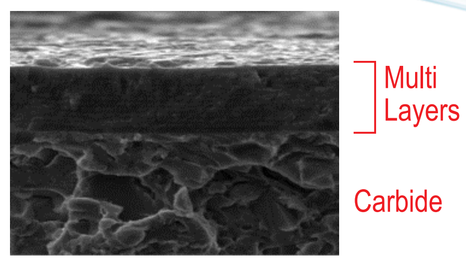


Ground Negative land
on cutting edge for Reliable Tool Life

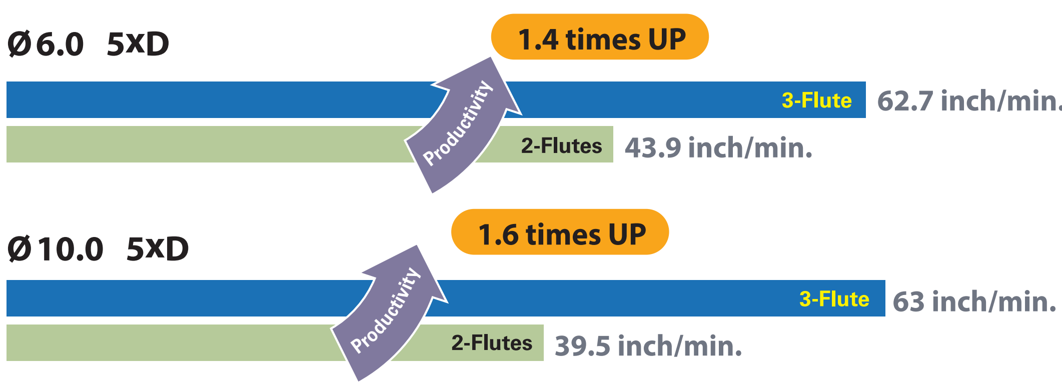
3-Slots
on end of shank for smooth and consistent coolant supply



H-Coating
(Upgraded AlCrN-Based : **Multi-Layer coating**)
- Higher worn-out resistance and Lower friction
- Higher Cutting Speed and Feed
- Improved drill Hole Quality



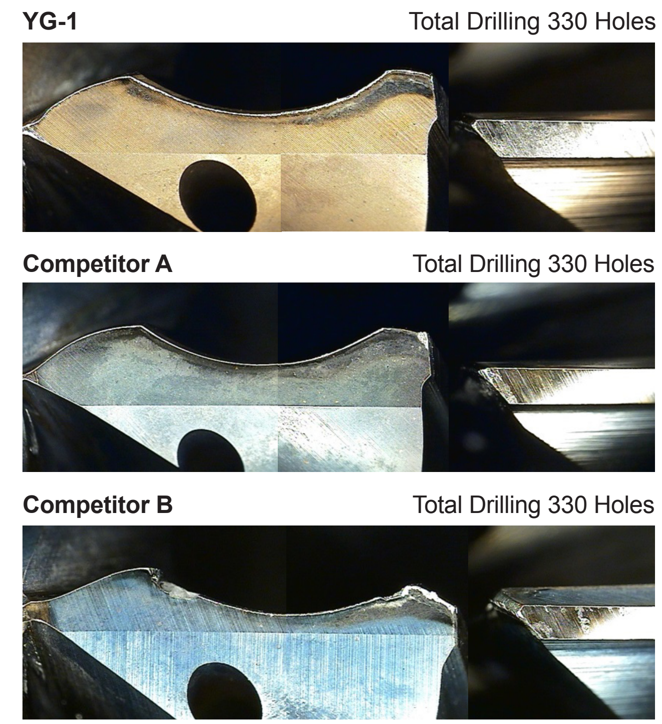
Productivity (Carbon Steel)



DREAM DRILLS - HIGH FEED

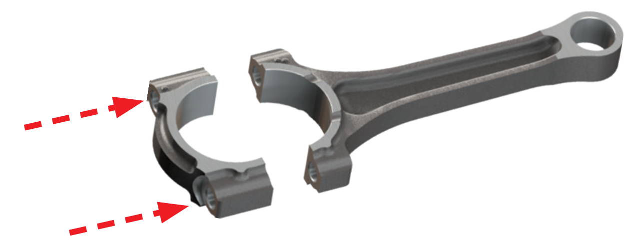
▶ SOLID CARBIDE DREAM DRILLS - High Feed with Coolant Holes

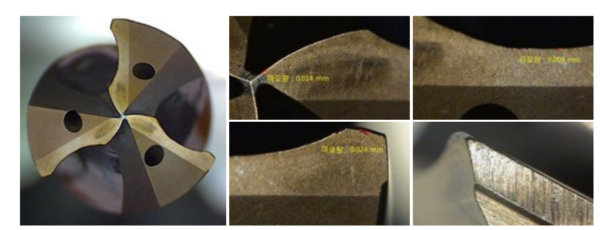
Tool	DGR495100 (Dream Drills High Feed)
Size	Ø10 x Ø10 x 61 x 103
Work Material	• AISI : 1045 • JIS : S45C • DIN : C45 (HRc20)
RPM	3,200 rev./min.
Feed	.0197 inch/rev.
Drilling Depth	1.97" (5xD)
Drilling Method	Blind Hole
Coolant	Wet Cut
Machine	Machining Center



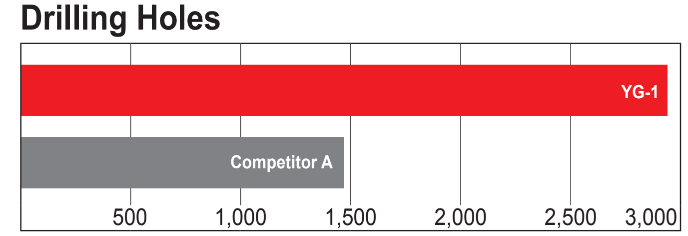
▶ SOLID CARBIDE DREAM DRILLS - High Feed with Coolant Holes

Tool	DGR495080 (Dream Drills High Feed)
Size	Ø8 x Ø8 x 53 x 91
Work Material	Connecting rod
RPM	2,000 rev./min.
Feed	0.009inch/rev.
Drilling Depth	1.58" (5xD)
Drilling Method	Internal Cooling, Water Soluble
Coolant	Wet Cut
Machine	Machining Center





Drilling Holes



DREAM DRILLS - FLAT BOTTOM

DREAM DRILLS FLAT BOTTOM

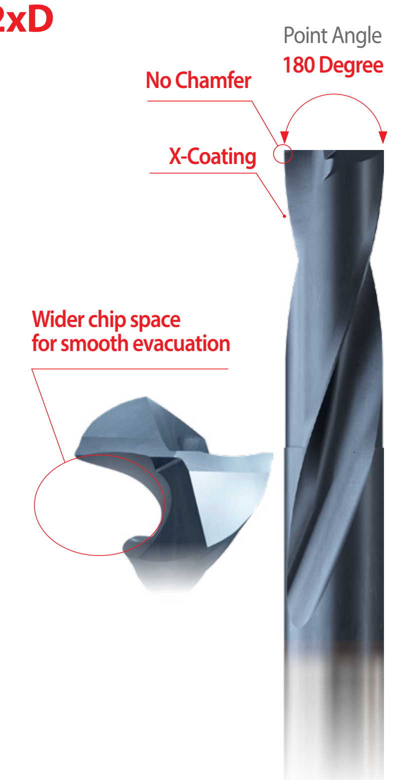
Advantages for Flat Bottom 2xD

180 Degree Point Angle enables drilling of Horizontal Surface and Sloped Surface

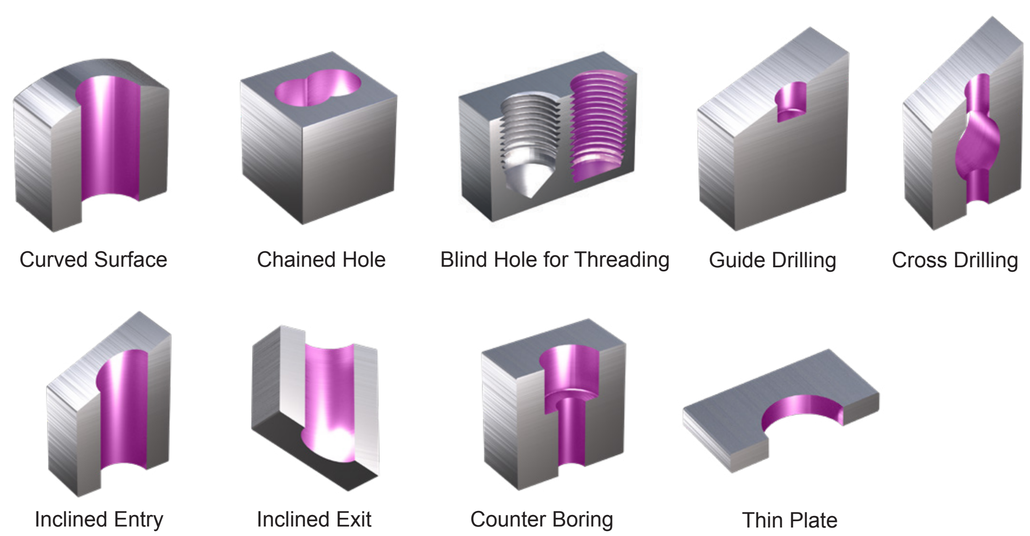
180 Degree Point Angle enables drilling of Horizontal Surface and Sloped Surface

Optimized flute shape for **Excellent Chip Evacuation**

High **Strength Cutting Edge** to improve tool life and versatility drilling



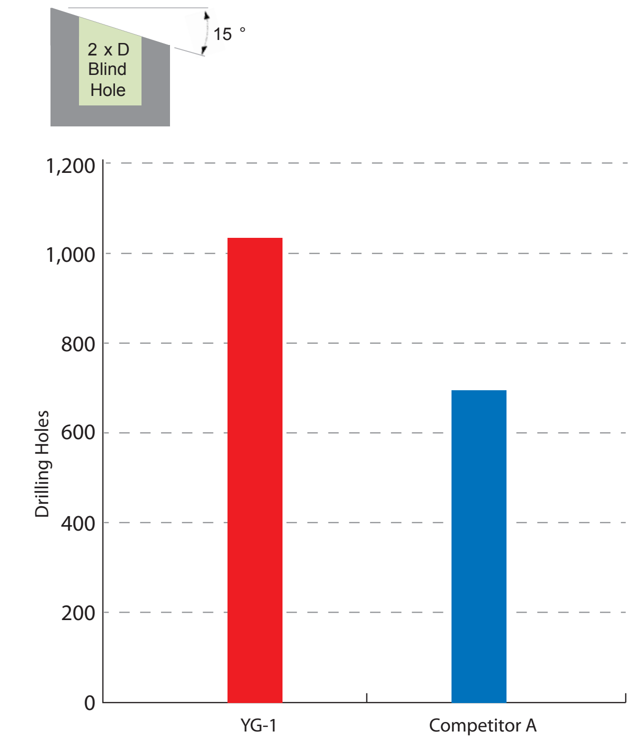
VARIETY OF DRILLING



DREAM DRILLS - FLAT BOTTOM

▶ SOLID CARBIDE DREAM DRILLS - Flat Bottom without Coolant Holes

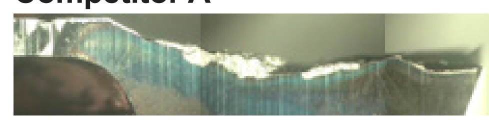
CUTTING CONDITION	
Drill Diameter (mm)	Ø6.0 (.2362 inch)
Work Material	• AISI : 1045 • JIS : S45C • DIN : C45 (HRc 20)
Cutting Speed	244.4 ft/min.
RPM	4,000 rev/min
Feed	.0039 in/rev.
Drilling Depth	12.0 mm (2XD) Blind Hole / without Pecking
Coolant	External Cooling Water Soluble (9% Emulsion)
Machine	Machining Center



YG-1

Small Chipping

Competitor A

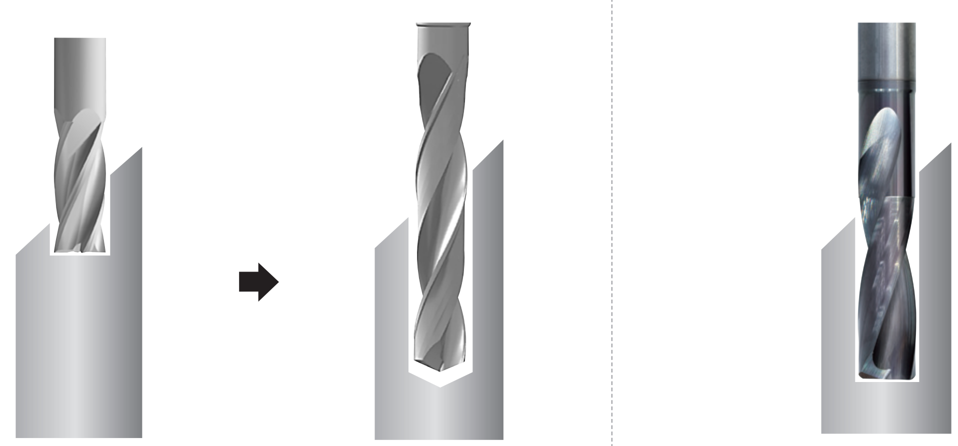


Big Chipping

Only One Operation for Angled Surface

For angled surfaces, two operations are required to drill in a conventional Process

For angled surfaces, only one operation can complete the drilling with Dream Drill Flat Bottom

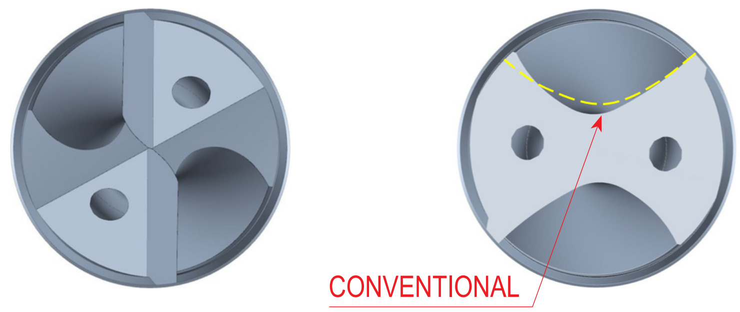


1st operation(End mill)
Counter boring to make flat surface and guide hole

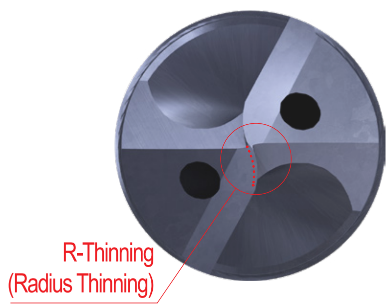
2nd operation(Drill)
Drilling to required depth of hole

One operation(Dream Drill Flat Bottom)
One Drill does it all
without using both an end mill and a drill

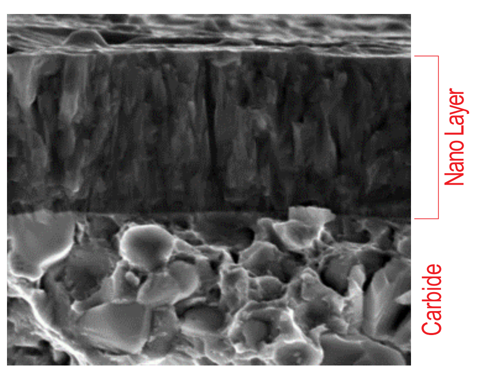
DREAM DRILLS - INOX



- Special Flute geometry and Chip pocket to help Chip evacuation and proper Chip Curl.
- strong rigidity from **Cutting Edge**
- high Performance on Stainless Steel and pre hardend Steel



- Positive Axial **Rake Angle** and cutting force, with **R-Thinning** enhance centering and Chip Breaking.



TiAlN Coating
(Upgraded **Ti**tanium **Al**uminum **N**itride : **nano-Layer coating)**
- Higher wear resistance and Lower friction
- Higher Cutting Speed and Feed
- Improved drill Hole Quality

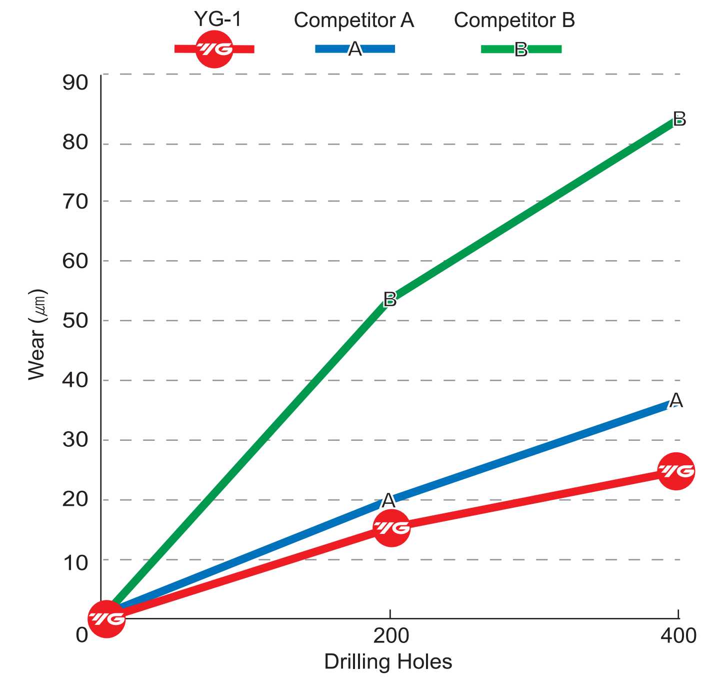
Special surface treatment after coating
to reduce friction and better chip flow.

DREAM DRILLS - INOX

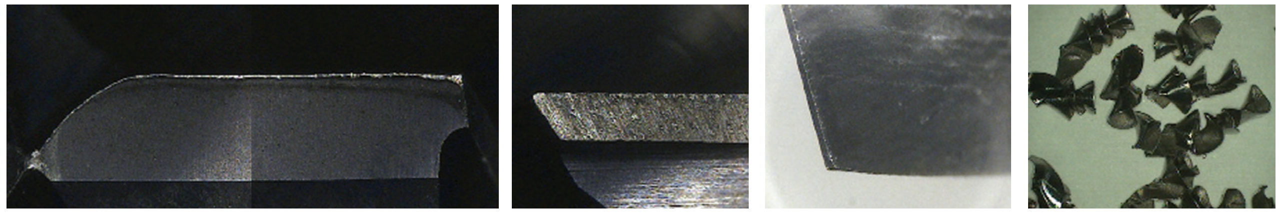
▶ SOLID CARBIDE DREAM DRILLS - INOX with Coolant Holes

Cutting Condition

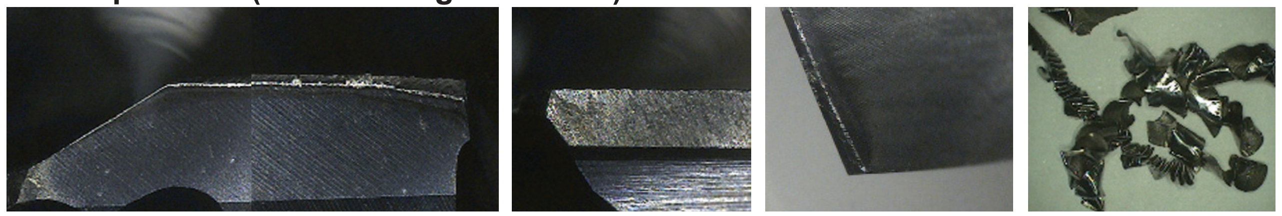
Tool	DH452060 (DREAM DRILL-INOX)
Size	Ø6 × Ø6 × 44 × 82
Work Material	- AISI : 304 - DIN : X5CrNi1810 (X4CrNi18-10)(HRc10) - JIS : SUS304
RPM	14,856 rev./min.
SFM	.229 ft/min
Feed	.0028 inch/rev
Drilling Depth	94˝ (4xD)
Coolant	Wet Cut



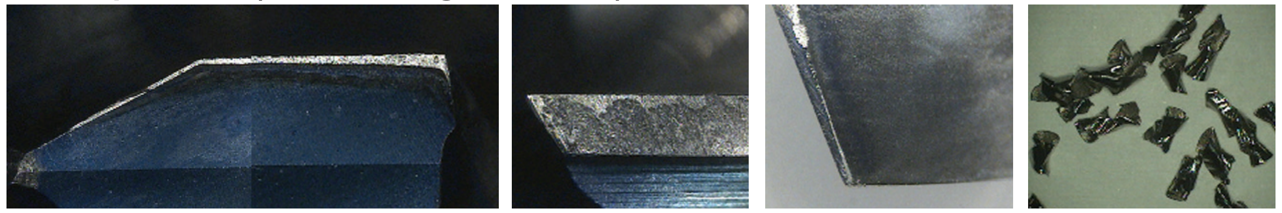
▶ YG-1 (Total Drilling 400 Holes)



▶ Competitor A (Total Drilling 400 Holes)



▶ Competitor B (Total Drilling 400 Holes)



DREAM DRILLS - ALU

Design that optimized flute shape and geometry suitable **for Aluminum, Aluminum alloy.**

Optimized point thinning to prevent any **chip-clogging from chip welding.**

Polished flutes improve **chip control and evacuation.**

The Drilling of High Speed is possible while maintaining **the excellent surface roughness of workpiece.**

Ø6.0 & Ø10.0 TEST, Aluminum(6061)

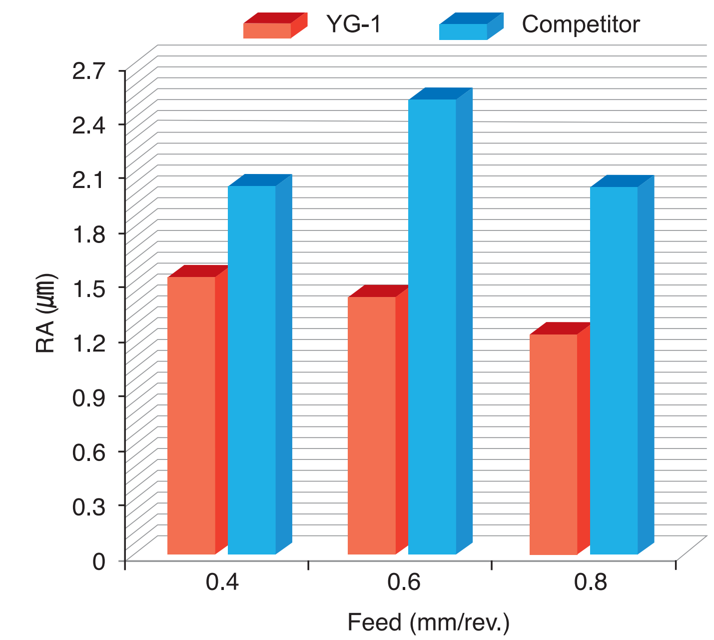
CUTTING CONDITION	DREAM DRILL-ALU		COMPETITOR A	
	Roundness	Straightness	Roundness	Straightness
SIZE Ø 6.0 Drilling Holes 1200 Holes	 0.08mm	 0.036mm	 0.16mm	 0.062mm
SIZE Ø10.0 Drilling Holes 820 Holes	 0.062mm	 0.017mm	 0.08mm	 0.047mm

DREAM DRILLS - ALU

▶ SOLID CARBIDE DREAM DRILLS - ALU with Coolant Holes

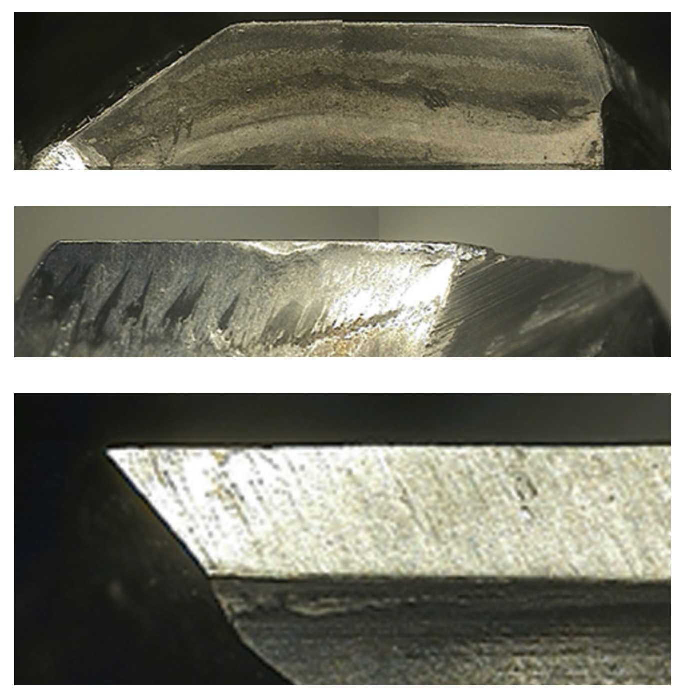
Cutting Condition

Tool	DREAM DRILLS-ALU
Size	Ø10.0×Ø10×61×103
Work Material	- AISI : 6061 - DIN : AlMgSiCu (HB75) - JIS : A6061
RPM	6,367 rev./min.
SFM	656 ft/min.
Feed	.0157 ~ .0315 inch/rev.
Drilling Depth	1.77˝ (4.5xD)
Coolant	Wet Cut
Machine	Machining Center

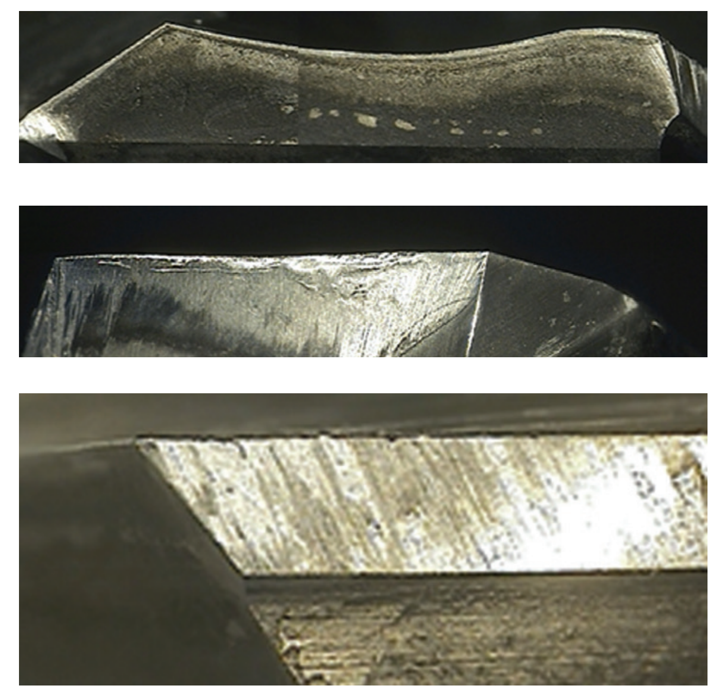


Surface Roughness of Work Piece

▶ YG-1 (Total Drilling 820 Holes)



▶ Competitor (Total Drilling 820 Holes)

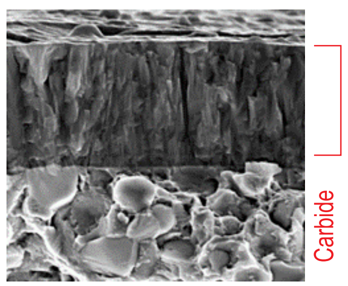


DREAM DRILLS - MQL TYPE

4-Facet point for good **centering capability**

Polished flute for enhanced **chip evacuation**

Optimized special **flutes** are ideal for removing chips and for productive drilling



Upgraded **TiAlN nano Layer Full Coating**

Compatible with the MQL (Minimum Quantity Lubrication) system.

- Reduction of Coolant related costs such as preparing, maintaining, disposal of emulsion
- Avoids additional efforts associated with part cleaining
- Allows for secure machining process ensuring predictable lubrication

Compare with Gun drills

- Used on conventional machining center (**MQL Drills**)
- **Higher productivity** than conventional HSS deep hole drills and Gun drills

Gun drill:
- Size Range : Ø2~Ø25
- Drilling Depth : 25xD ~ over 100xD
- * Need Gun drilling machine

MQL Drill:
- Size Range : Ø3~Ø14
- Drilling Depth : 10xD ~ 40xD
- * Need enough machine stroke on machining center

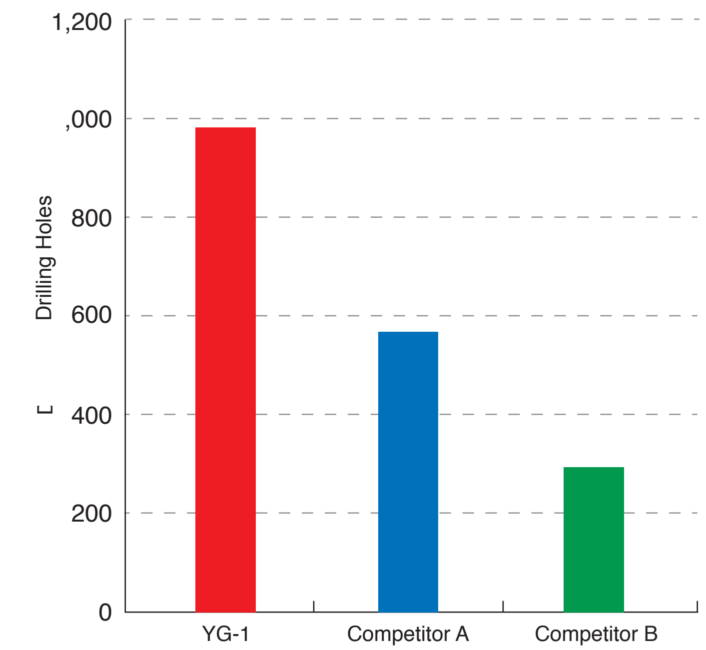
DREAM DRILLS - MQL TYPE

- Flute Shape and Point Shape allowing better chip evacuation in deep hole drilling
- Excellent Coating and Surface Treatment for better performance and chip evacuation

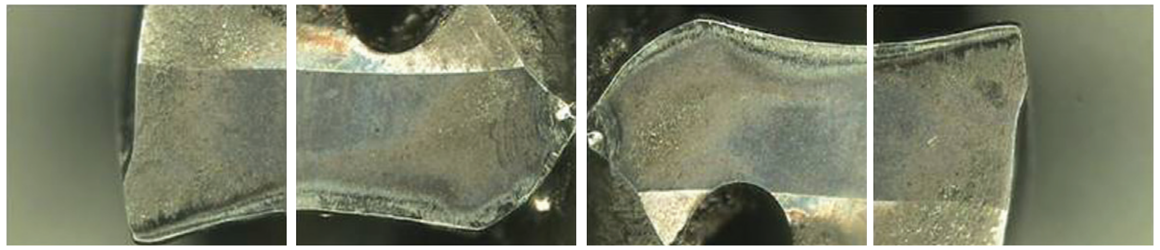
▶ SOLID CARBIDE DREAM DRILLS - MQL Type with Coolant Holes

Cutting Condition

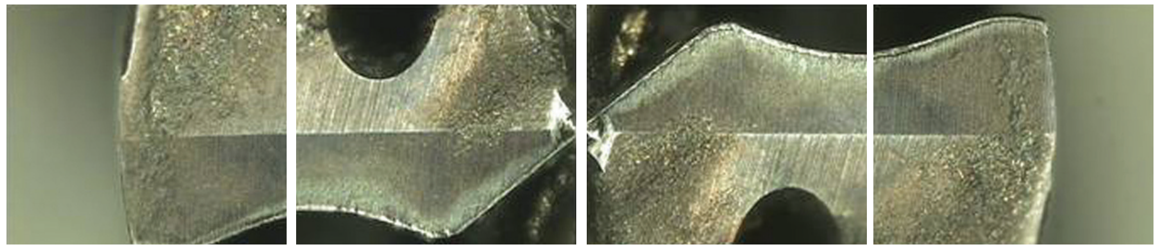
Tool	DH520060 (DREAM DRILL- MQL TYPE, 20×D)
Size	Ø6×Ø6×138×193
Work Material	- AISI : 1045 - DIN : C45(HRc25) - JIS : S45C
RPM	3,528 rev./min.
SFM	218 ft/min.
Feed	.0075 inch/rev.
Drilling Depth	3.15˝
Coolant	Wet Cut
Machine	Machining Center



▶ YG-1 (After Drilling 1,000 Holes)



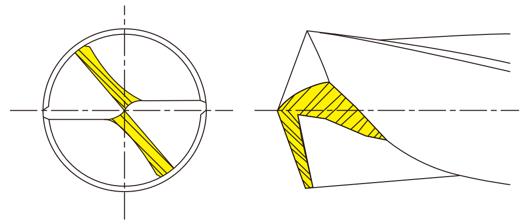
▶ Competitor A (After Drilling 546 Holes)



DREAM DRILLS for HIGH HARDENED STEEL

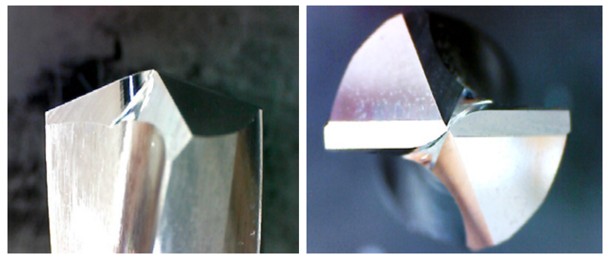
Low Helix
The low Helix angle maximizes tools' rigidity and stability with less deflection

Special Thinning (R+U Thinning)
Unique drill point geometry with special thinning to minimize cutting workload, axial thrust loading and heat generation.



Coating
TiAlN nano coating combines high hardness with high thermal stability against oxidation, allows machining the upper level of hardened steels HRc 50-70.

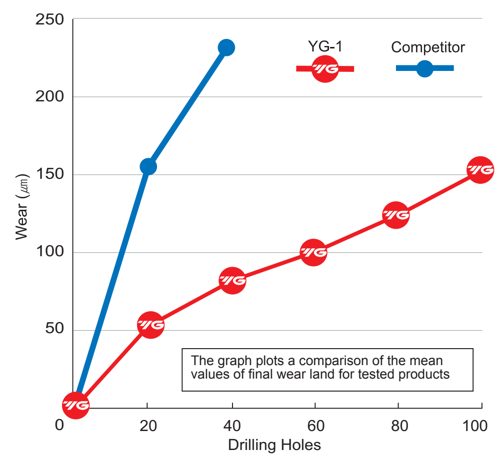
Point Shape



Polished Flutes
Polished flutes improve coating addition, with better chip control and evacuation.

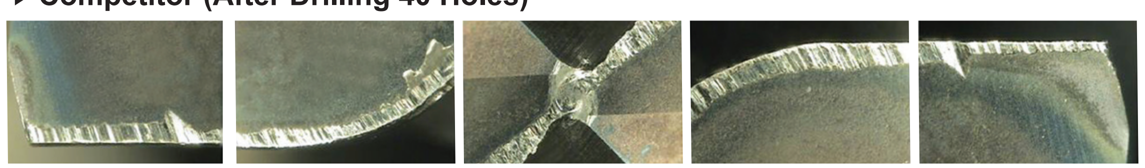
Cutting Condition

Tool	Dream Drills for High Hardened Steels
Size	Ø10×Ø10×63×111
Work Material	- AISI : H13 - DIN : X155CrV-Mo12-1(HRc60) - JIS : SKD11
RPM	380 rev./min..
SFM	39 ft/min.
Feed	.0016 inch/rev.
Drilling Depth	.98˝ (2.5xD)
Coolant	Wet Cut

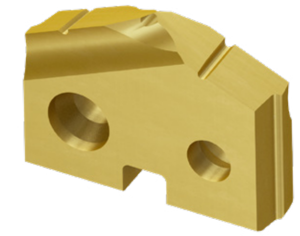


▶ YG-1 (After Drilling 100 Holes)

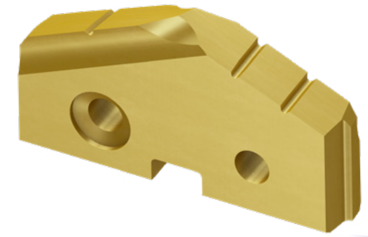
▶ Competitor (After Drilling 40 Holes)



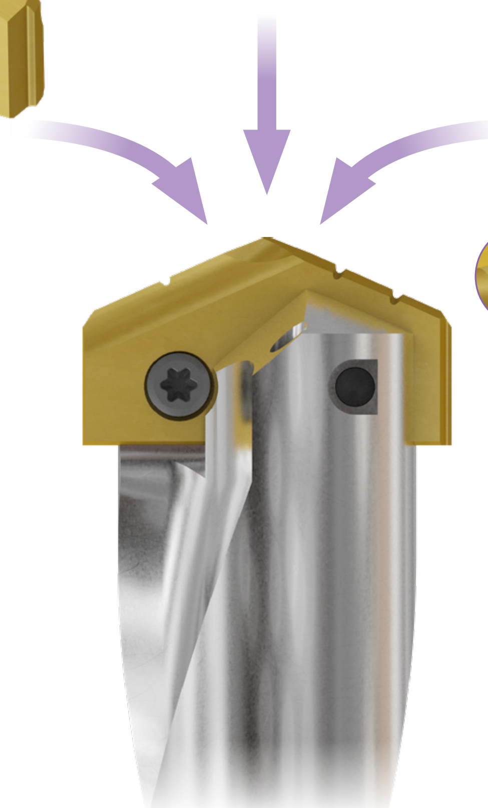
SPADE DRILLS (Standard, SM-Point)

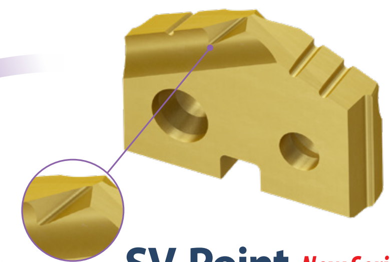


SM-Point
Multiple Web Thinning for and Radius Back Face for Increased Cutting Speed and Feed
Wide Chip Space
Good Self-Centering
Less Tool Lead-off
Reduction in bell mouthing

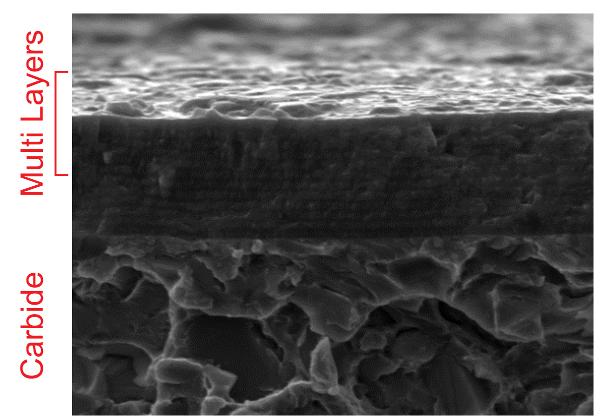


Standard-Point
Standard Point and Neutral Rake Angle for
Stable Cutting
Self Centering
Chip Breaking
Rigidity on Center





SV-Point *New Series*
Improved stability and hole straightness
- Smooth cutting
- Breaks chips
- Low thrust
- Stable torque
- Self centering - Long tool life



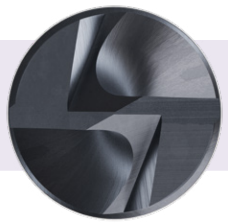
Multi layered H-coating
Micro Grain Carbide Insert
Outstanding Productivity & Reliability

H - Coating
(Upgraded AlCrN-Based : Multi-Layer coating)
• Higher worn-out resistance and Lower friction
• Higher Cutting Speed and Feed
• Improved drill Hole Quality

MULTI-1 DRILLS

Wide range of work materials;
Carbon Steels, Alloy Steels, Structural Steels, Hardened Steels(up to HRc45), Cast Iron, Stainless Steels, Aluminum and Titanium

P M K N S

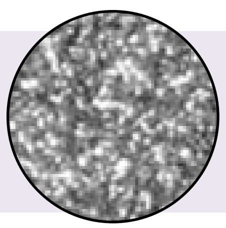


Point Shape to Maximize Self-centering

▶ Excellent positioning - bush is not necessary

Flute Design for the Best Chip Evacuation

▶ Prevent chip clogging and reduce axial thrust

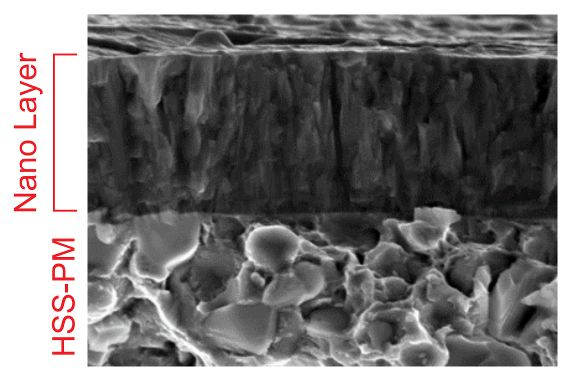


Premium Powder Material with Excellent Toughness

▶ Improve cutting edge strength with higher stability and rigidity

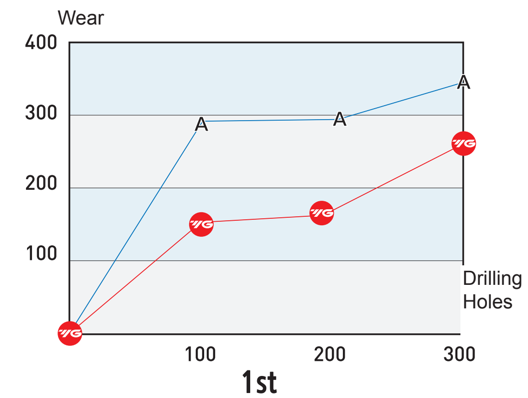
TiAlN Coating
(Upgraded Titanium Aluminum Nitride : **nano-Layer coating)**
- Higher wear resistance and Lower friction
- Higher Cutting Speed and Feed
- Improved drill Hole Quality

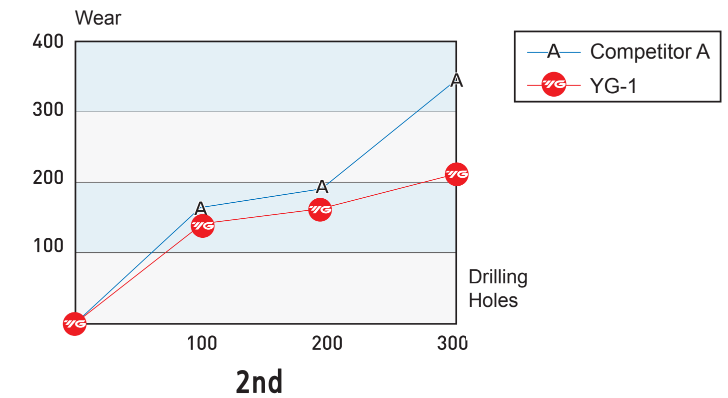
Special surface treatment after coating
to reduce friction and better chip flow.



MULTI-1 DRILLS

TEST I Comparison of edge wear



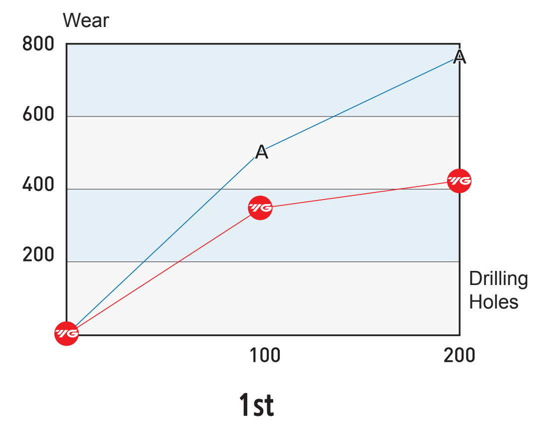


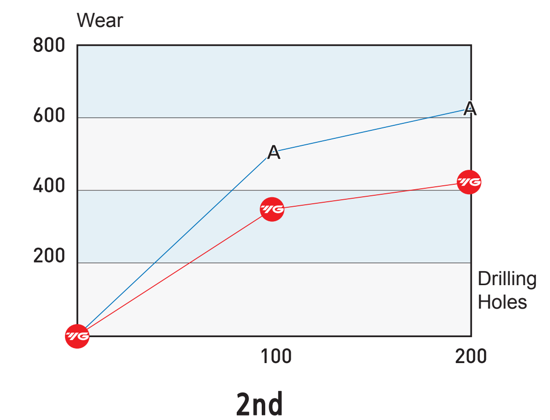
Cutting Condition

Work Material	- AISI : 316 - JIS : SUS316 - DIN : X3CrNiMo17-13-3

Drilling Depth	.94″
Total Drilling (hole)	300 Holes
RPM	600 rev./min.
Feed	4.3307 inch/min.

TEST II Comparison of edge wear



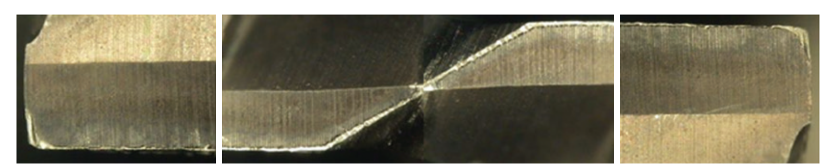


Cutting Condition

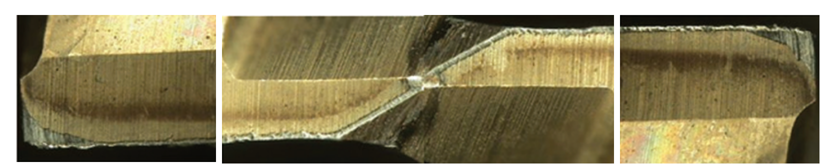
Work Material	- AISI : D2 - JIS : SKD11 - DIN : X155CrVMo12-1

Drilling Depth	.94″
Total Drilling (hole)	300 Holes
RPM	600 rev./min.
Feed	4.3307 inch/min.

▶ YG-1



▶ Competitor



SYNCHRO TAPS

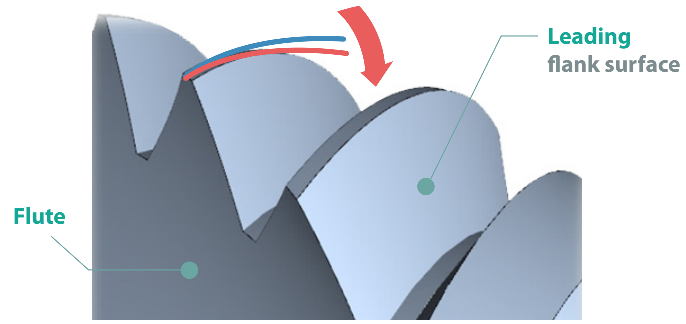
FEATURES OF GEOMETRY

▶ Shorter thread length will reduce chip problems at higher speed tapping conditions

▶ Shank Tolerance 'h7' for precision clamping and rigid tapping

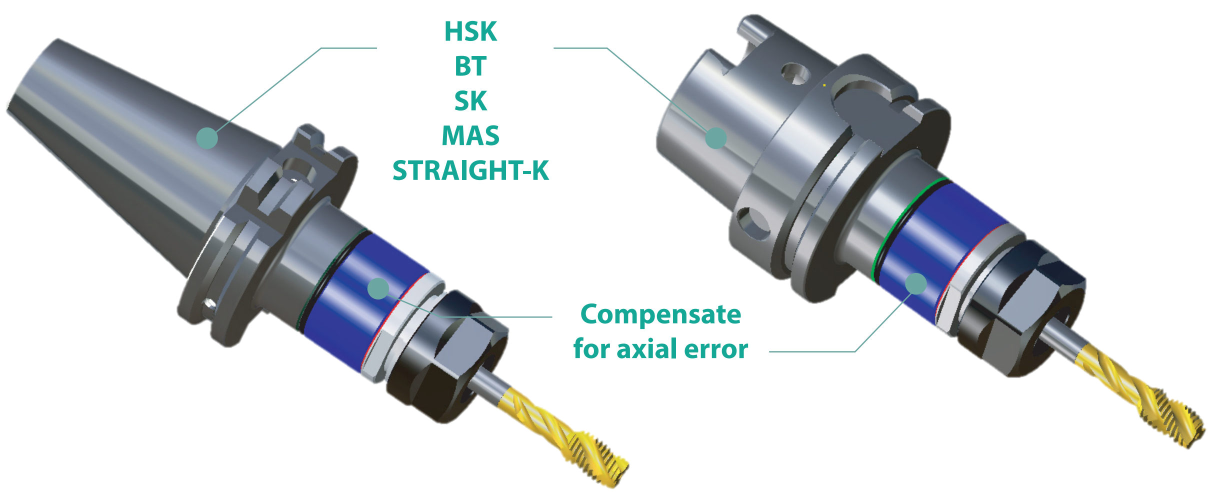
▶ More thread relief allows high speed cutting

▶ HSS-PM (Powder Metallurgy) for more reliable performance and wear resistance



SYNCHRO TAPPING CHUCK (ER TYPE)

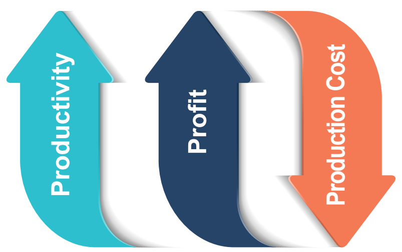
▶ When using Synchro taps, YG-1 strongly recommends SYNCHRO Tapping Chuck for the best thread quality and superior tool life



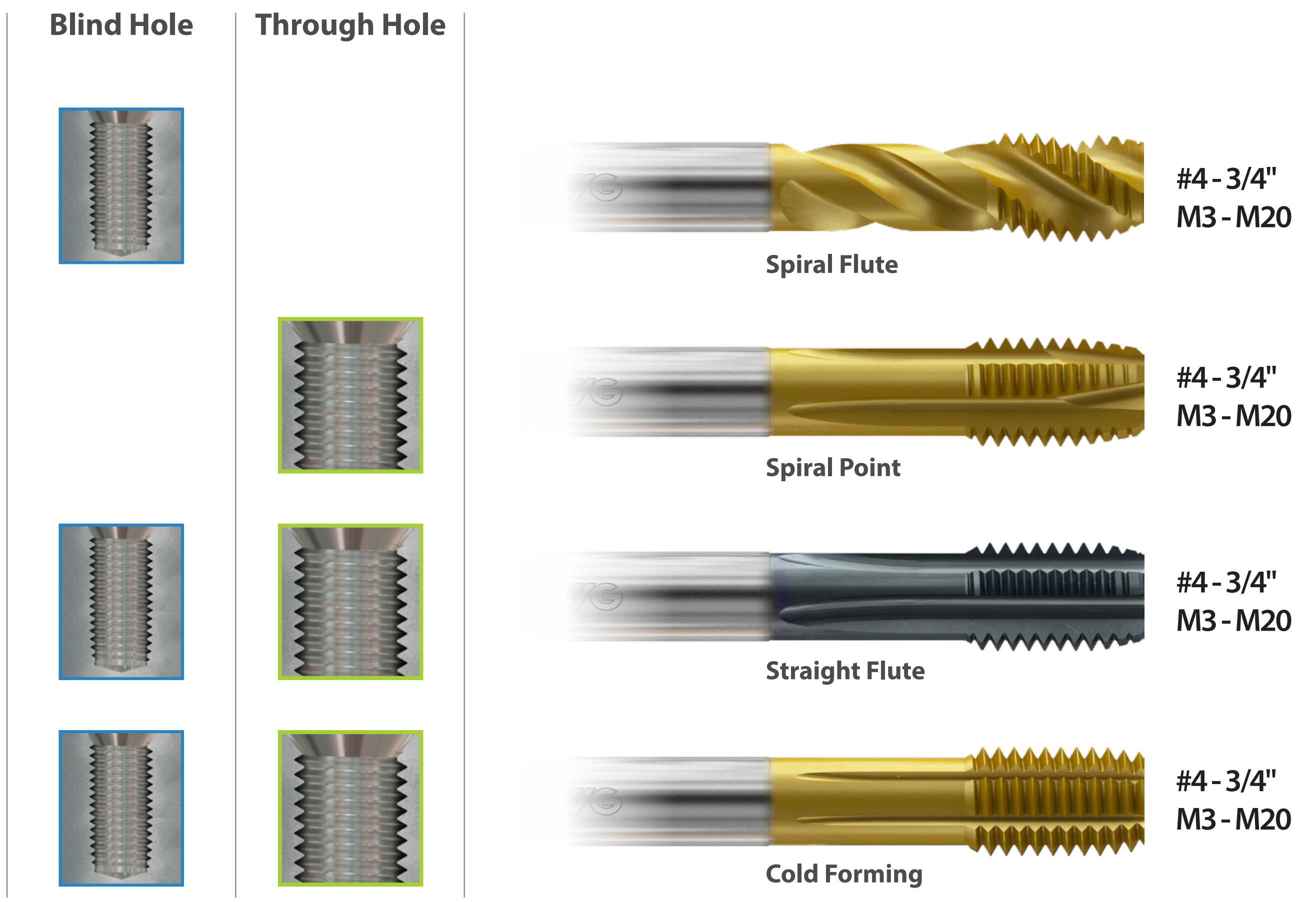
SYNCHRO TAPS

ADVANTAGES

▶ PRODUCTIVITY
Up to 3 times Faster
in tapping compared to conventional taps (General Steel)



▶ 4 kinds of taps are available



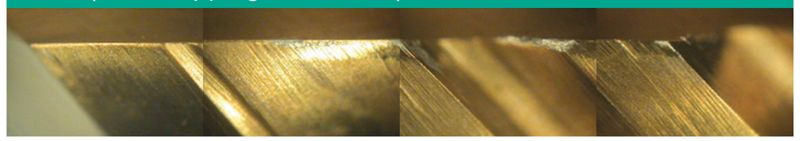
SYNCHRO TAPS

TEST Ⅰ SPIRAL FLUTE

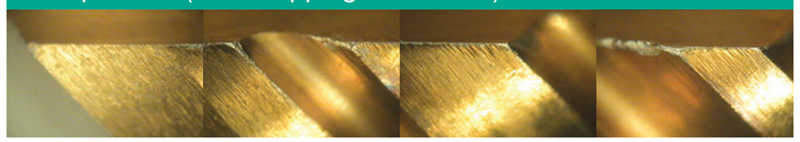
Cutting Condition

Tool	HSS-PM Synchro Spiral Flute Tap
Size	M10×1.5
Work Material	- AISI : 1045 - DIN : C45 - JIS : S45C (HRc35)
Cutting Speed	98.4 ft/min.
SFM	2500 rev./min.
Feed	1.5 mm/rev.
Tapping Depth	.9843″ (2.5xD / Blind Hole)
Tapping Holes	330
Tapping Method	External Cooling Water Soluble (9% Emulsion)
Machine	Machining Center

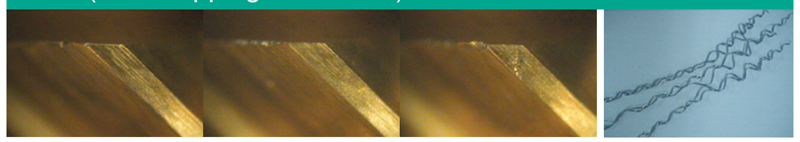
YG-1(Total Tapping 330 Holes)-Chamfer



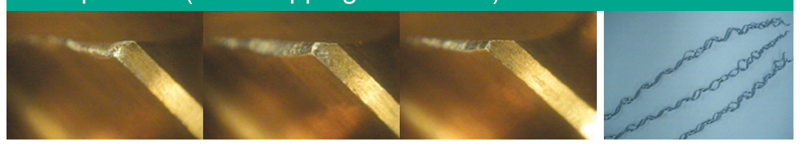
Competitor A(Total Tapping 330 Holes)-Chamfer



YG-1(Total Tapping 330 Holes)-Thread



Competitor A(Total Tapping 330 Holes)-Thread

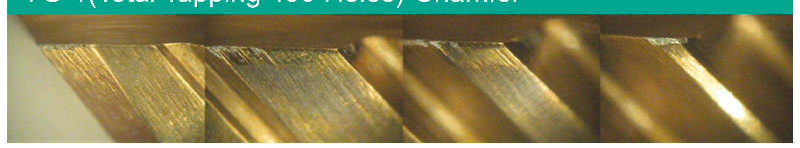


TEST Ⅱ SPIRAL FLUTE

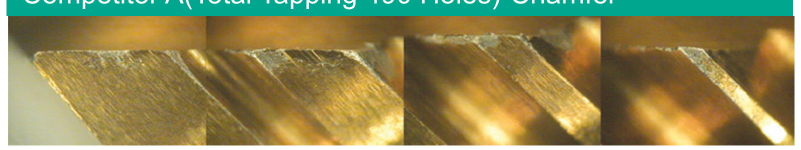
Cutting Condition

Tool	HSS-PM Synchro Spiral Flute Tap
Size	M6×1.0
Work Material	- AISI : 4140 - DIN : 42CrMo4 - JIS : SCM440 (HRc20)
Cutting Speed	98.4 ft/min.
SFM	2500 rev./min.
Feed	1.0 mm/rev.
Tapping Depth	.5906″ (2.5xD / Through Hole)
Tapping Holes	400
Tapping Method	External Cooling Water Soluble (9% Emulsion)
Machine	Machining Center

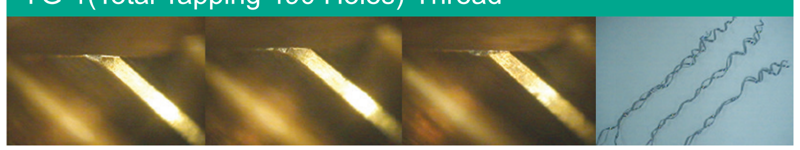
YG-1(Total Tapping 490 Holes)-Chamfer



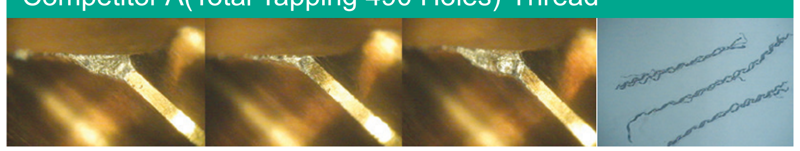
Competitor A(Total Tapping 490 Holes)-Chamfer



YG-1(Total Tapping 490 Holes)-Thread



Competitor A(Total Tapping 490 Holes)-Thread

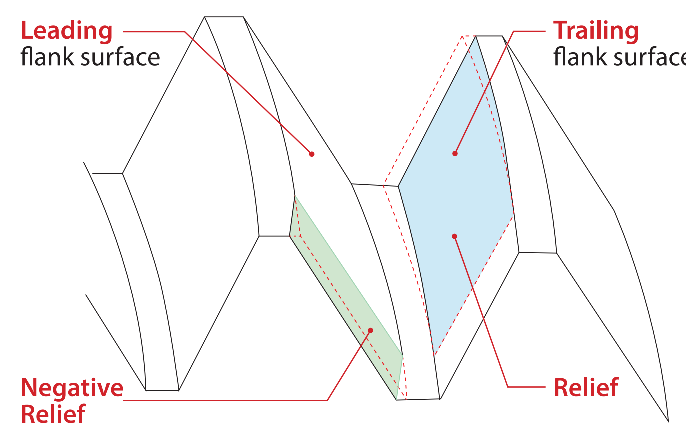


COMBO TAPS

General Use for Various Materials

Combo Tap's geometry provides enough flute space resulting in smooth chip evacuation and therefore a continuous production process. Guarantee a high level of process reliability even under unfavorable conditions.

- ▶ For Steels, Stainless Steels, Cast Iron and Non-Ferrous Materials
- ▶ Prevents over & under feeding by its optimized flank geometry
- ▶ Constant threading quality preventing oversized threading



- Optimized flank geometry to prevent over & under feeding
- Enables smoother tapping with better chip evacuation
- Compensation of cutting force, which reduces tap wear and extends tool life.

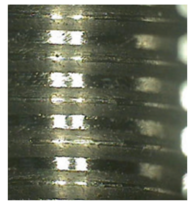
COMBO TAPS

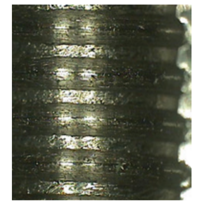
TEST I SPIRAL FLUTE

Cutting Condition

Tool	Combo Spiral Flute Tap
Size	M8×1.25
Work Material	- AISI : 1045 - DIN : C45 - JIS : S45C(HRc35)
Tapping Depth	.79˝
Coolant	Water Soluble Oil
Vc(Tapping Speed)	33 ft/min.

Surface Roughness of Work Piece

YG-1 Total Tapping 204 Holes	Competitor A Total Tapping 159 Holes	Competitor B Total Tapping 204 Holes
		




TEST II SPIRAL POINT

Cutting Condition

Tool	Combo Spiral Point Tap
Size	M2×0.4
Work Material	- AISI : 1045 - DIN : C45 - JIS : S45C(HRc35)
Tapping Depth	.24˝
Coolant	Tapping Oil
Vc (Tapping Speed)	33 ft/min.

Surface Roughness of Work Piece

YG-1 Total Tapping 450 Holes	Competitor A Total Tapping 318 Holes	Competitor B Total Tapping 103 Holes
	Tool broke after tapping 318 holes	Tool broke after tapping 103 holes

TEST I SPIRAL FLUTE

Cutting Condition

Tool	Combo tap for Stainless Steels (TQ744246)
Size	M4×0.7
Work Material	- DIN : X5CrNi18 10(X 4 CrNi18-10) - WR : 1.4303 - JIS : SUS304
Tapping Depth	.39"
Coolant	Wet Cut
Vc (Tapping Speed)	26 ft/min

		Tool broke after tapping 83 holes

TEST II SPIRAL FLUTE

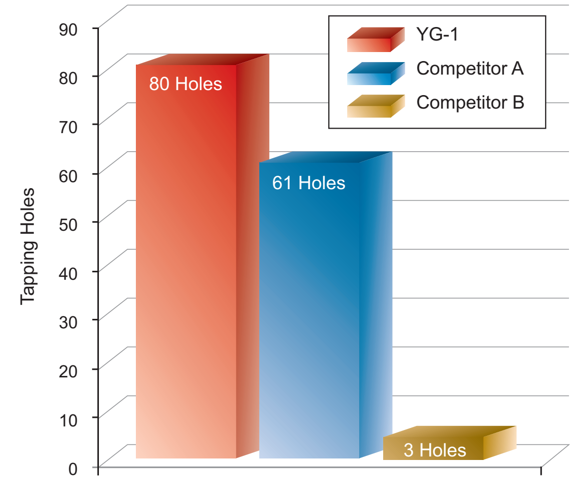
Cutting Condition

Tool	Combo tap for Stainless Steels (TQ744316)
Size	M6×1.0
Work Material	- DIN : X5CrNi18 10(X 4 CrNi18-10) - WR : 1.4303 - JIS : SUS304
Tapping Depth	.59"
Coolant	Wet Cut
Vc (Tapping Speed)	26 ft/min

YG-1 Total Tapping 230 Holes	Competitor A Total Tapping 92 Holes	Competitor B Total Tapping 98 Holes
	Tool broke after tapping 92 holes	Tool broke after tapping 98 holes

YG TAP HARDENED

TEST I STRAIGHT FLUTE TAPS

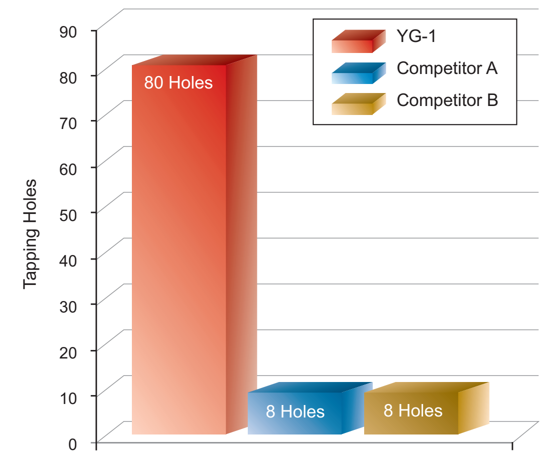


Cutting Condition

Tool	Straight flute tap
Size	M6×1.0
Work Material	- AISI : H13 - DIN : X40GrMoV51(1.2344) - JIS : SKD61 (HRc50)
SFM	188 rev./min.
Feed	1.0 mm/rev.
Tapping Depth	.39" (1.5×D)
Coolant	Wet Cut

YG-1 Total Tapping 80 Holes	Competitor A Total Tapping 61 Holes	Competitor B Total Tapping 3 Holes
	Tool broke after tapping 61 holes	Tool broke after t apping 3 holes

TEST II STRAIGHT FLUTE TAPS

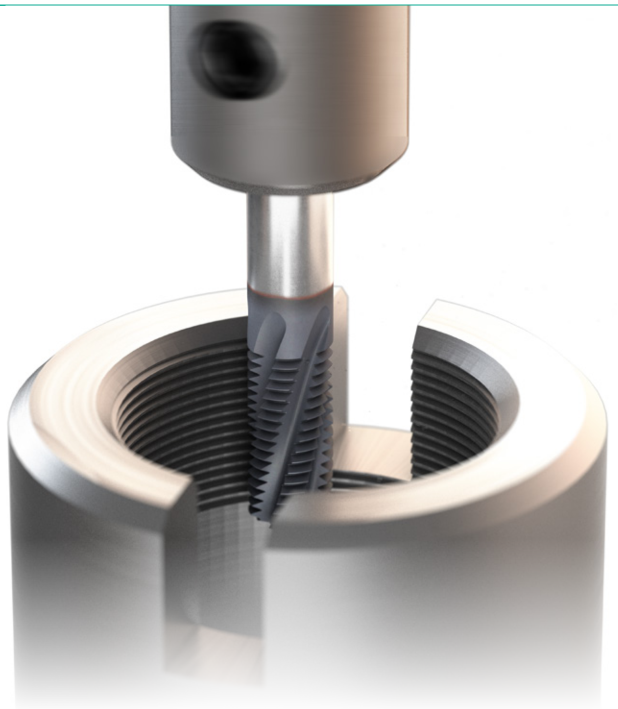


Cutting Condition

Tool	Straight flute tap
Size	M6×1.0
Work Material	- AISI : H13 - DIN : X40GrMoV51(1.2344) - JIS : SKD61 (HRc50)
SFM	188 rev./min.
Feed	1.0 mm/rev.
Tapping Depth	.35" (1.5×D)
Coolant	Wet Cut

YG-1 Total Tapping 80 Holes	Competitor A Total Tapping 8 Holes	Competitor B Total Tapping 8 Holes
		Tool broke after tapping 8 holes

THREAD MILLS

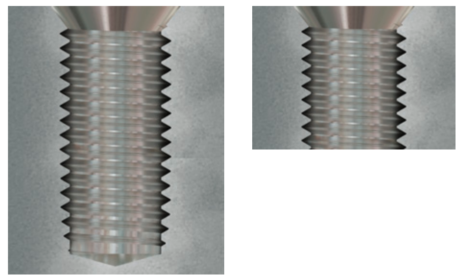


A Thread mill can produce various thread diameters with the same pitch

Disadvantage of tapping is that a different size tap is required for each size hole

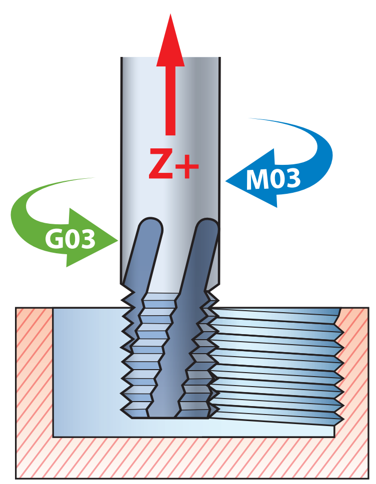
One Thread mill for blind-holes and through-holes

Thanks to short chips, No chip problems with tapping No problems removing broken tools from the workpiece

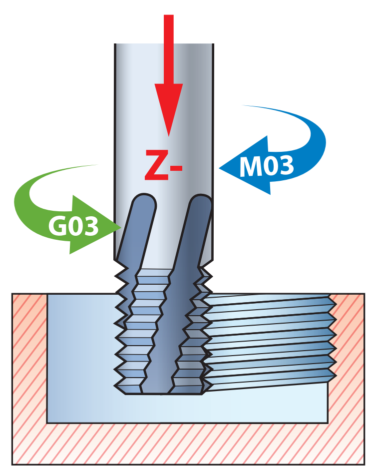


One Thread mill for right- and left-hand threads

Right-hand and left-hand threads can be produce with the same tooling just by adjusting CNC commands.



Right-hand thread



left-hand thread

Higher Cutting Speed than tapping.
Higher Reliable Process than tapping, because of short chips

Thread Milling takes much less torque than tapping

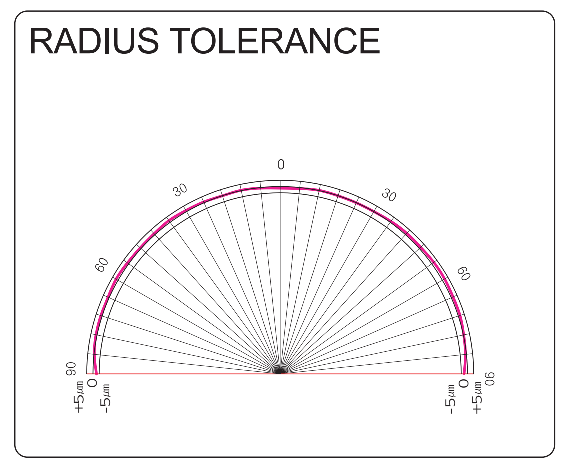
CBN End mills

Applications

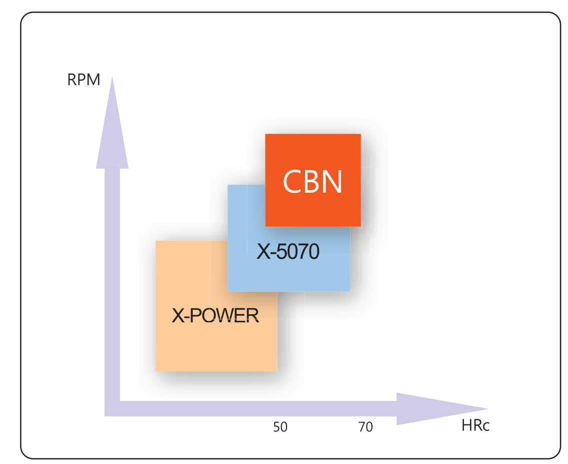
- ▶ Applicable for high hardened steel (HRc 50 ~ HRc 70)
- ▶ Applicable for finishing operation with high spindle speed (RPM 20,000 ~ 50,000)
  - * Achieve mirror-like surface of work materials

Features

- ▶ Premium tool substrate CBN(Cubic Boron Nitride)
  - * Superior tool life compared with carbide end mills
  - * Execllent heat resistance
- ▶ Achieve stable machining and higher accuracy for the duration
  - Save the setting time and cost due to reducing frequent tool changes
  - Improve repeatability in performance
- ▶ Specially designed geometry improves tool rigidity at high speed cutting



Tighter Radius Tolerance ±0.005mm
higher accuracy and longer tool life.

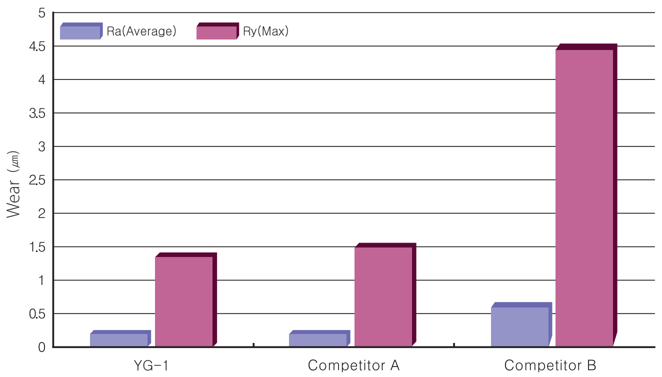


High Speed & Finishing

CBN End mills

TEST Ⅰ Total Milling Length : 787 ft

Surface Roughness of Work Piece



Cutting Condition (Ø1mm)

Tool	2Flute, CBN Ball Nose End mill
Size	Ø1×Ø4×0.6×50
Work Material	- AISI : D2 - DIN : X155CrV-Mo12-1 - JIS : SKD11(HRc60)
SFM (ft/min.)	309
RPM (rev./min.)	30,000

Competitor B
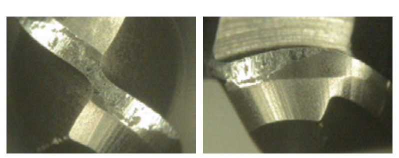
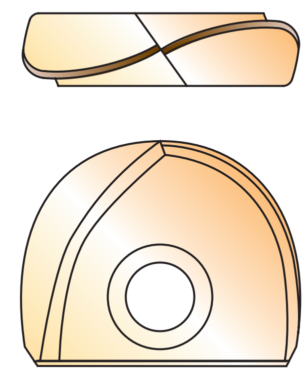
71.471㎛



Competitor C
170.200㎛

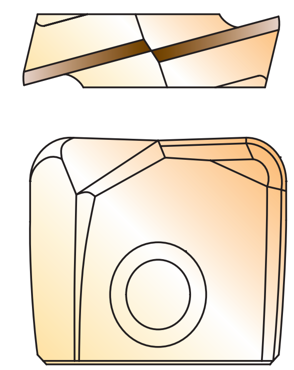
i-Xmill End mills

i-Xmill BALL INSERT



1. Helical end gash ("S" gash) geometry
   - Low milling torque
   - Prevents chattering
   - Improves chip ejection
   - Prolong tool life
2. Polished cutting edges
   - Better wear resistance and tool life
   - Improves repeatability in performance
   - Improves surface roughness on work-piece
   - Improves coating
3. Special coating
   - Combine high hardness with high thermal stability against oxidation
   - Superior wear resistance
   - Faster feeds and speeds

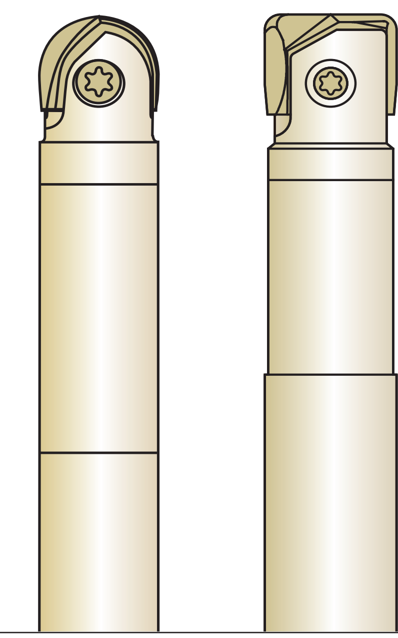
i-Xmill CORNER RADIUS INSERT



1. The optimized tool geometry achieves better reliability and reduces vibration and cutting load.
2. Corner radius insert can be used with the ball holder, but for a better precision in cutting. It is recommended to use the corner radius holder.
3. The various and wide cutting range allows machining in both roughing and finishing.
4. Special coating makes high hardness with high thermal stability against oxidation.

i-Xmill CARBIDE HOLDER

1. As rigid as a solid carbide end mill for stable machining with reduced vibration and enhanced finish
2. Allows a high quality of finishing even when machining the deeper part of a mold
3. Longer tool life than a steel holder
4. Shrink Fit Holding system can be applied
5. Upon request, the broken holder is able to be regenerated
6. Your carbide holder can be regenerated as YG-1 type upon request

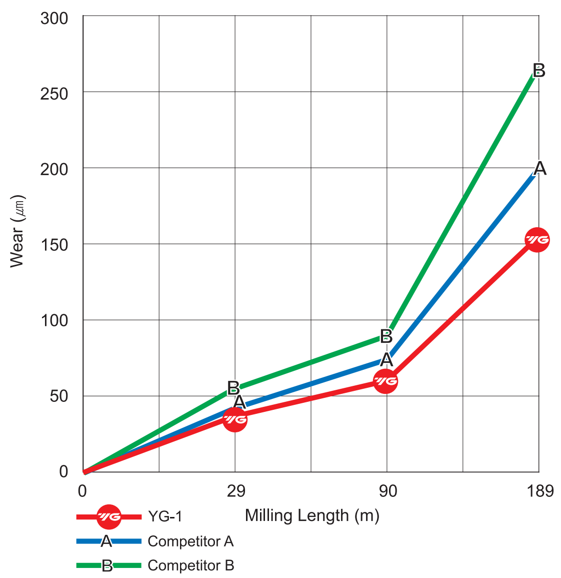


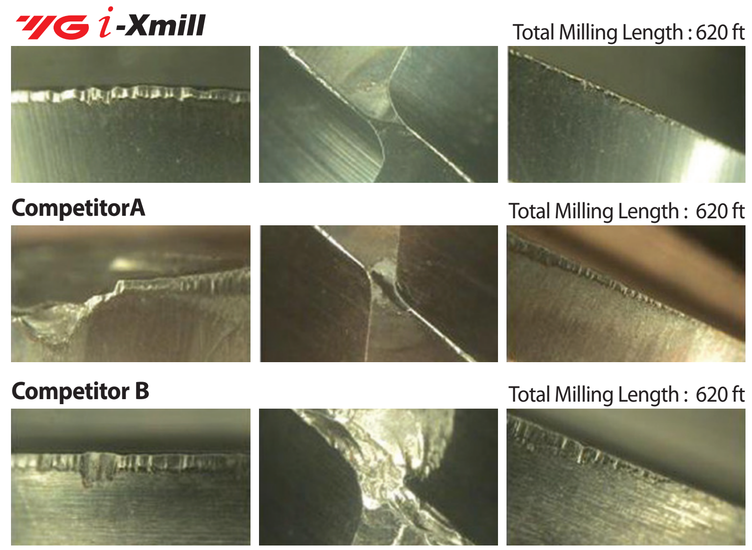
i-Xmill STEEL HOLDER

1. Premium alloy steel with excellent strength
2. Precise shank tolerance (h6)
3. Nickel plated, to prevent corrosion and improve lubricity

i-Xmill End mills

TEST Ⅰ i-Xmill Ball Nose





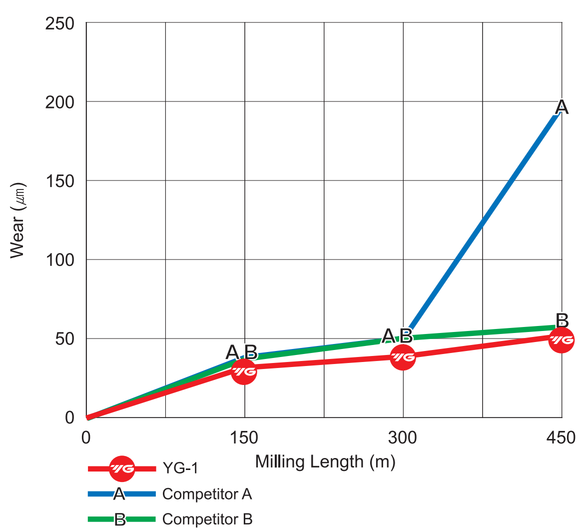
Cutting Condition (Side Cutting)

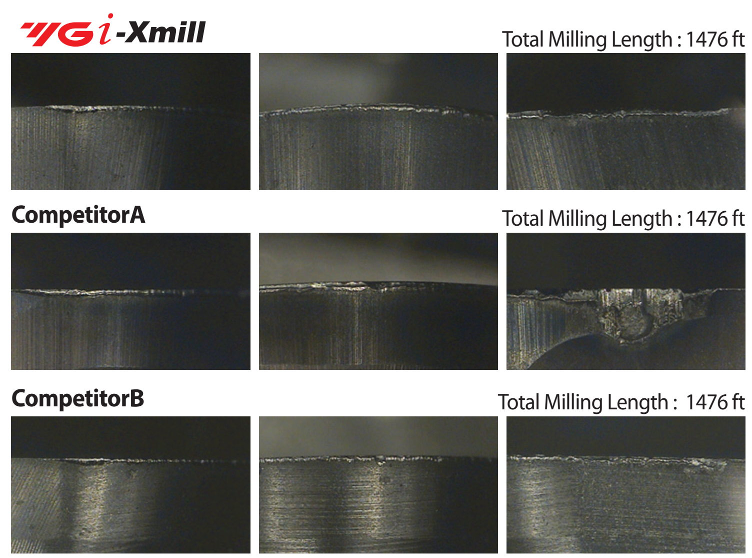
Tool	i-Xmill Ball
Size	Ø16×R8.0
Work Material	- JIS : SKD61 (HRc50), - DIN : X40GrMoV51(1.2344) - AISI : H13

SFM (ft/min.)	264
RPM (rev./min.)	1,600
IPM (inch/min.)	15.35
IPT (inch/tooth)	.0047

Milling Depth(inch)	Axial : .0315˝, Radial : .0630˝
Coolant	Oil Mist
Overhang	YG-1, Competitor B : 1.89˝ / Competitor A : 2.20˝
Machine	Machining Center

TEST Ⅱ i-Xmill Corner Radius





Cutting Condition (Side Cutting)

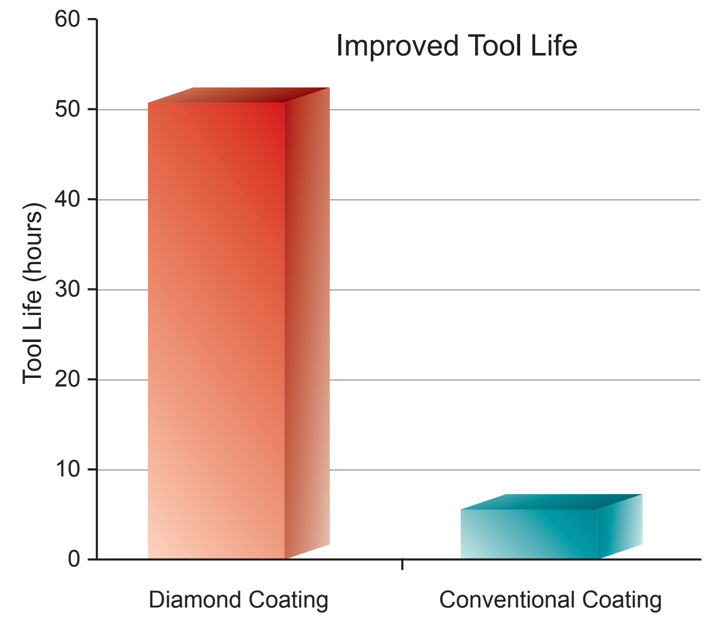
Tool	i-Xmill Corner Radius
Size	Ø16×R2.0
Work Material	- KS : KP4M (Mold steels HRc35) - DIN : 40CrMnNiMo8-6-4(1.2738) - AISI : P20+Ni

SFM (ft/min.)	918
RPM (rev./min.)	5,570
IPM (inch/min.)	87.80
IPT (inch/tooth)	.0079

Milling Depth(inch)	Axial : .1181˝, Radial : .0079˝
Coolant	Oil Mist
Overhang	2.76˝
Machine	Machining Center

i-Xmill End mills

TEST Ⅲ i-Xmill with Diamond Coating



Cutting Condition

Tool	i-Xmill Corner Radius (XMR110D17010)
Size	Ø17 x R1.0
Work Material	Graphite
SFM (ft/min.)	1052
RPM (rev./min)	108
Feed (mm/min)	2,800
Feed per tooth (mm/tooth)	.009
Milling Depth (inch)	Axial : .008
Coolant	Air

Coating properties

This coating generation features a good crystalline structure. It protects tools perfectly against abrasive wear and is unsurpassed in graphite cutting.

Feature

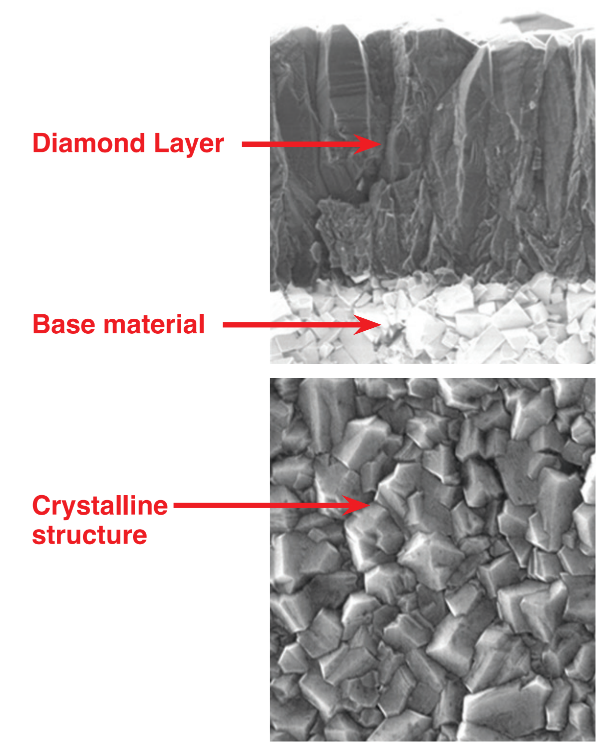
1. High Abrasive wear resistance.
2. Good Coefficient of friction.(against Al)
3. High Precision.

Advantages

Diamond coated i-Xmill possible to cut graphite workpieces with substantially greater speeds and in significantly better quality.

Applications

1. Precision-structured graphite electrodes.
2. Micro-Electromechanical Systems. (MEMS)
3. Printed Circuit Boards. (PCBs)
4. Ceramics (greens, sintered) Dental, machinery.



i-SMART Modular Type End mills

Modular Type, Y-Coated Exchangeable Carbide Milling Heads for machining Pre-Hardened Steels

- Avoids expensive investments by using existing Copy Milling adaptor technology
- Proven performance transferred to cost effective modular system
- Optimal solution for large size or long reach Die&Mold applications

Seven different selections of modular heads fit in different holders.

Carbide Holder
Straight Neck Type

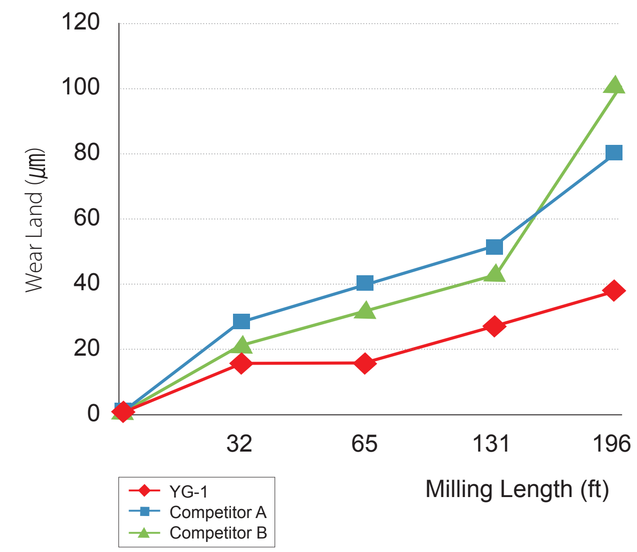
Steel Holder
Straight & Taper Neck Type

YG-1 Tool Holder
COPY MILL ARBOR

Excellent flexibility by using copy milling coupling

i-SMART Modular Type End mills

TEST Total Milling Length : 196 ft



Cutting Condition (Down & Side Cutting)

Tool	4Flute Corner Radius
Size	Ø16 x R1.0
Work Material	- AISI P20+Ni - DIN 1.2738 Improved - KP4M (HRc35)
SFM (ft/min.)	511
RPM (rev./min.)	3,100
IPM (inch/min.)	11.02
IPT (inch/tooth)	.0656

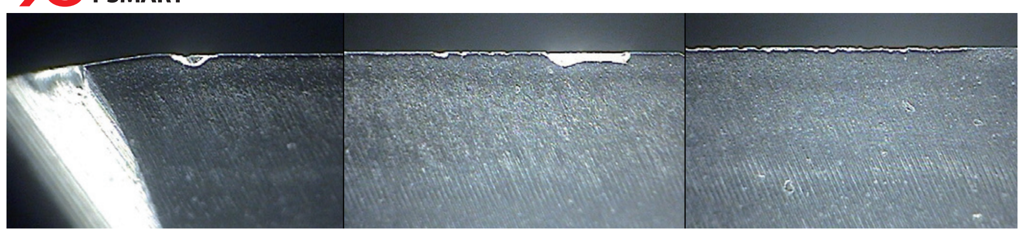
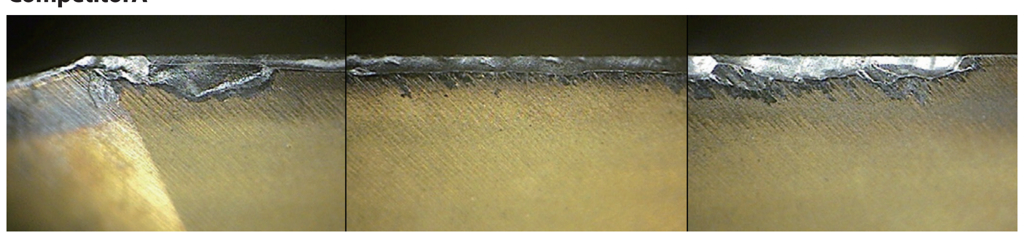
Machine	Machining Center

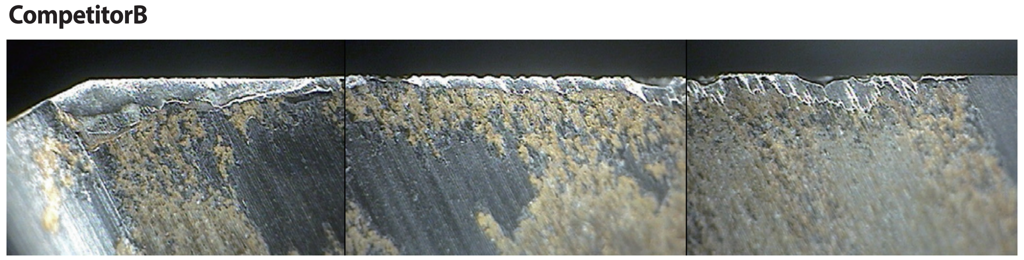
YG i-SMART



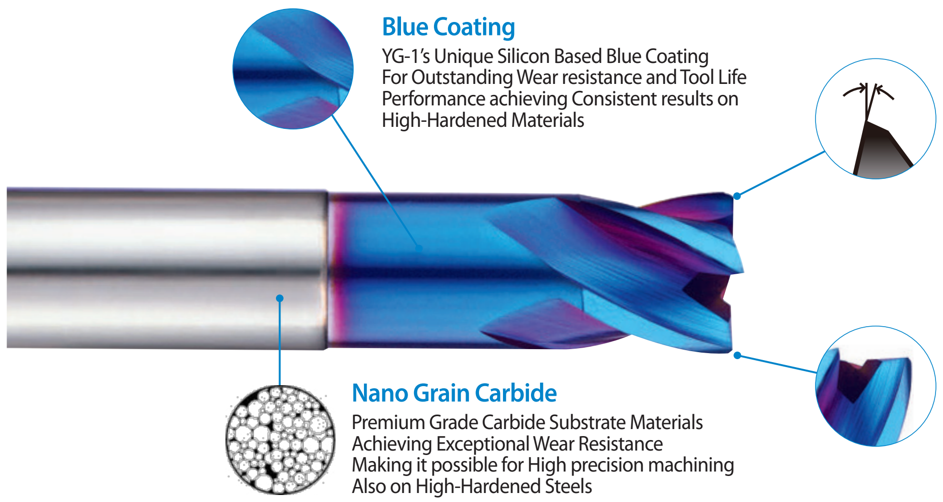
CompetitorA



CompetitorB



X5070 End mills



Blue Coating
YG-1's Unique Silicon Based Blue Coating For Outstanding Wear resistance and Tool Life Performance achieving Consistent results on High-Hardened Materials

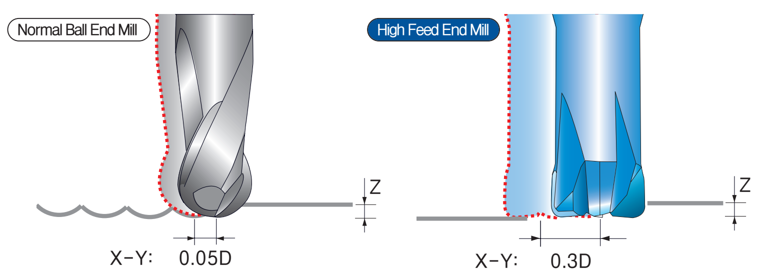
Negative Rake Angle
Exclusively Designed to Resist High-Hardened materials Preventing Chipping and also achieving Superb performance specially On High-Hardened Materials

Nano Grain Carbide
Premium Grade Carbide Substrate Materials Achieving Exceptional Wear Resistance Making it possible for High precision machining Also on High-Hardened Steels

Corner Geometries
High Performance Corner Radius Applied to Prevent Chipping and Higher Cutting Speed with longer Tool life

High Feed End Mill Capabilities :

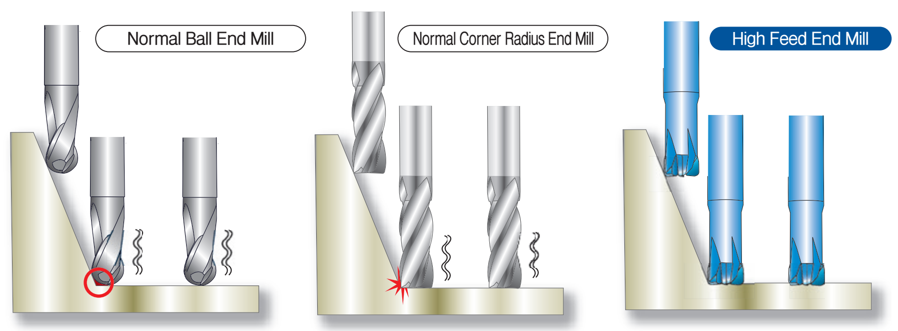
- ☑ High speed roughing
- ☑ High speed finishing... Mirror-like surface



▶ More number of flutes than the normal 2F ball E/M results in high-feed cutting.
For X - Y wide cutting pitch, high effective cutting performs in short tool working time.
(Example of performance : for the material HRc 50~55)

ITEM	SIZE	RPM	IPM	DEPTH OF CUT	
				Z(mm)	X-Y(mm)
HIGH FEED END MILL	4F Ø10 X R2	5,400	433	0.2	3.0
NORMAL BALL END MILL	2F Ø10 X R5	7,500	98	0.2	0.5

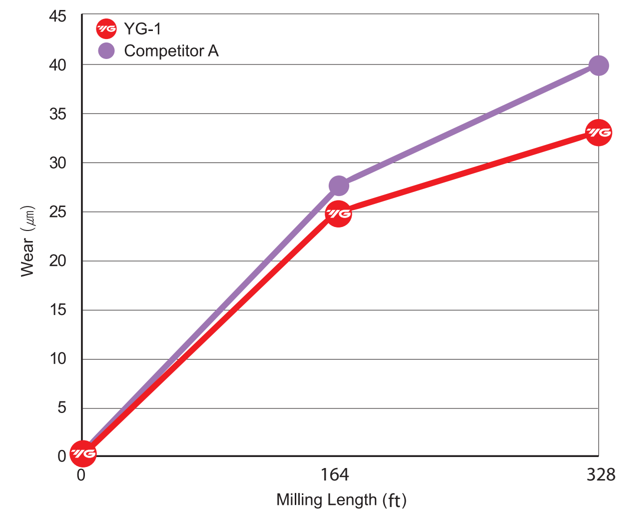
▶ For cutting on slopes and corners, the remaining part to be cut is smaller than one that remains after working with normal ball End Mill. It saves the time and cost



▶ By using straight flute, the rigidity of corner radius is improved. And it's also possible to get less damage to end teeth and radius than normal radius End Mill.

X5070 End mills

TEST I Carbide 6 Flute 45° Helix End mill for Hardened Steel



Cutting Condition (Down & Side Cutting)

Tool	6Flute 45° Helix
Size	Ø16×Ø16×40×110
Work Material	- AISI : H13 - DIN : X40CrMoV5-1(1.2344) - JIS : SKD61(HRc50)
SFM (ft/min.)	317

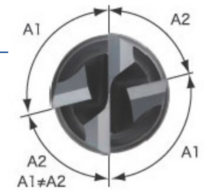
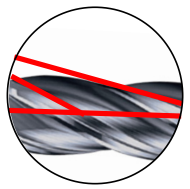
4G Mills End mills

High Speed Cutting for Pre-Hardened Steels up to HRc55

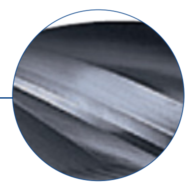
Suitable for wide range of work material, specifically for increasing tool life
when machining pre-hardened materials, low hardness materials and cast iron, etc.
High speed cutting, dry and wet cut recommended together.





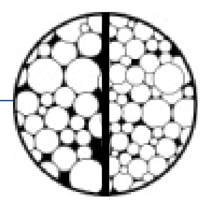
Unequal Index & Multiple Helix

4G Mills, 4 Flute Multiple Helix End Mills exclusively designed to reduce vibration and also to achieve excellent chip evacuation



Optimal Edge Preparation

All 4G Mills products contain an Optimal Edge Preparation to prevent chipping, also obtaining an excellent surface finish with a longer tool life in High Speed Cutting



Ultra Micro Grain & Nano Grain Carbide

Premium Grade Carbide Substrate Materials
achieving exceptional wear resistance
making it possible for High Precision Machining

High Technology Y-Coating

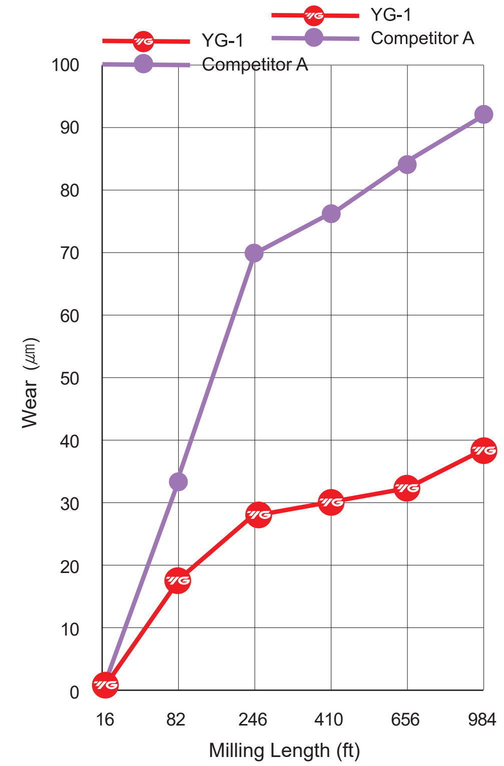
AlCr Based, YG-1`s High Technology
In-house coating for maximum tool life and high performance
Excellent quality coating developed by YG-1

Holds a Large Variety of Product Range for Multiple Use

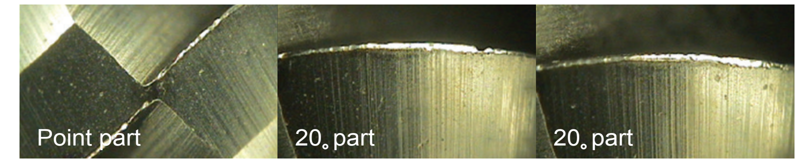
Large Variety of Products
For Several Different Applications with Different Size and Lengths
▶ Size : .004" ~ 1"

4G Mills End mills

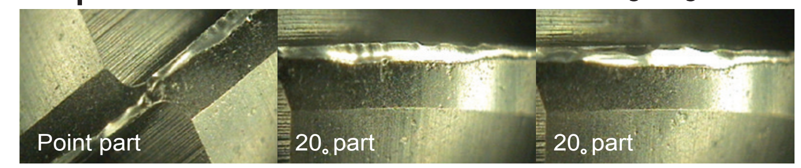
TEST I - Ball Nose



4G Mills — Total Milling Length : 984 ft



CompetitorA — Total Milling Length : 984 ft



Cutting Condition (Profile Cutting)

Tool	2Flute, Carbide Ball End Mill
Size	Ø6×6×12×90

X-SPEED ROUGHER End mills

Characteristics

- Unique flute design for excellent chip evacuation and vibration reduction.
- Optimal roughing tooth profile to reduce cutting forces.
- Special tool geometry for high feed rate and heavy cutting.
- Strong end tooth design for plunge and pocket milling.
- Custom engineered coating to allow long tool life and excellent chip evacuation.

X-POWER PRO End mills

Performance Upgrade

- Achieved from several tests to apply the most optimal technology
- New coating, raw material, honing technology

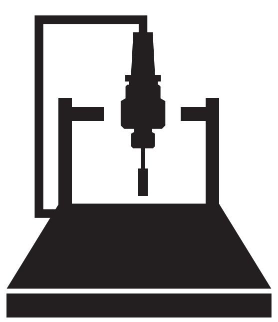
Work Material

- Pre-Hardened Steels up to HRc 55, and Cast Iron

P	K

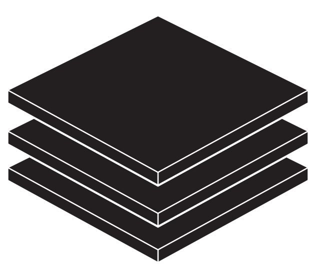
For Mold & Die Industries

- Plastic injection, die casting, military parts, automotive parts, electronic parts, etc.



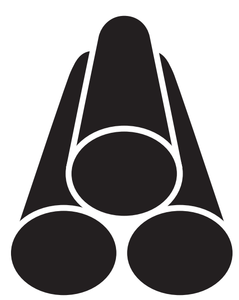
Honing

Advanced honing technology system made from YG-1



Coating

The optimal coating applied, chosen by several tests of different coating technologies



Raw Material

Made from high performance raw material with better quality

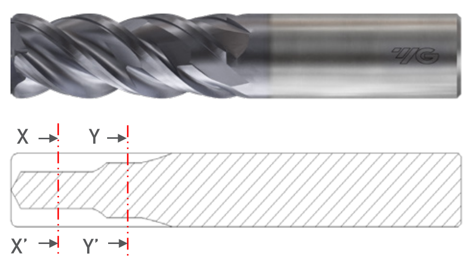
TitaNox-POWER End mills

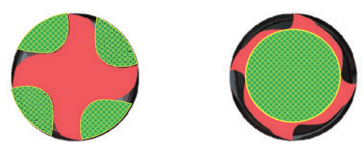
High Speed Machining for Exotic Materials: Titanium and Stainless Steels

- Excellent tools for Aerospace Industries, Energy & Power generations.
- For Roughing and Semi-finishing of universal use, also for Finishing difficult-to-machine materials.
- YG-1's advanced coating technology makes it possible to maintain an excellent Wear resistance, Oxidation resistance and better Thermal stability.

Offers a high performance metal removal rate with secured and chatter free machining in semi-finishing and finishing.

I Y-Coated Solid Carbide 4 Flute End Mills with Double Core



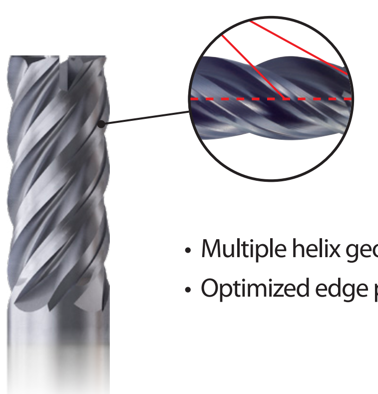


<SECTION X-X'>
Excellent chip evacuation

<SECTION Y-Y'>
Higher rigidity

- Double core geometry reduces tool deflection and improves dimensional stability.
- Optimized edge preparation protects chipping problems in high speed machining.
- Variable flute design brings out perfect performance in both slotting and side milling operations.

II Y-Coated Solid Carbide 5 Flute End Mills with Multiple helix



- Multiple helix geometry delivers silent cutting and reduces chattering.
- Optimized edge preparation increases tool life and makes heavy cutting possible.

Y-Coated / 5 Flutes

TitaNox-POWER End mills

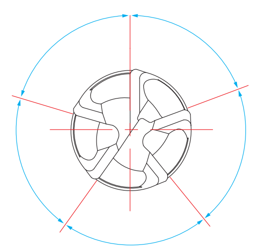
TitaNox-POWER HPC

NEW 5 FLUTE DESIGN for
HEAVY CUTTING APPLICATIONS
SLOTTING & HIGH EFFICIENCY MILLING

Features

- New design enhances chip space in heavy cuts, while still maintaining rigidity in peel milling.
- Full eccentric relief for edge strength.
- YG-1 advanced coating for better wear resistance
- Unequal index design for Chatter-Free cutting



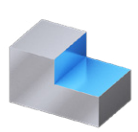
Unequal Index

Exclusively Designed Unique Geometry applied to Reduce Vibration and also to achieve Excellent surface finish

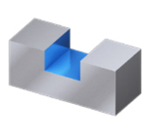
Core Design

YG-1's High Performance Core Geometries is designed for superior chip evacuation.
It's excellent at Slotting & Heavy Profiling.

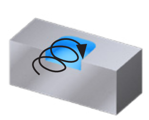
Applications



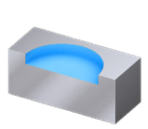
Side Cutting



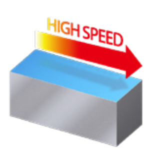
Slotting



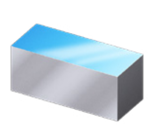
Trochoidal Milling And Peel Milling



Circular Interpolation



HSM



Finishing

Work Materials

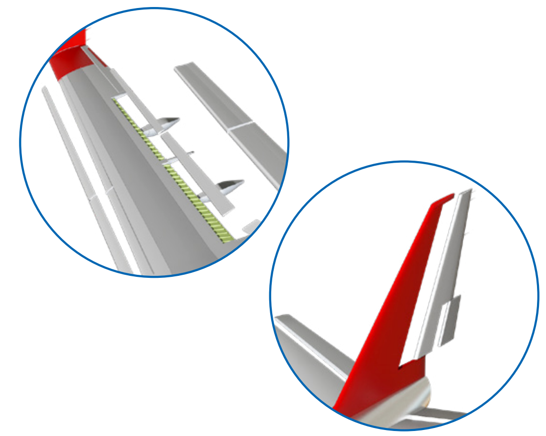
M **S**

Recommended for high performance milling of Stainless Steel, Titanium, and Heat-Resistant Super Alloys

TitaNox-POWER HPC

Part Description

Hydraulic Valve



Size(inch)	1/2(R.03") x 1/2 x 1-1/4 x 3-1/2
Work Material	15-5PH (HRc 34-42 / HB 320-400)
Tool Holder	Shrink fit
SFM	420 ft/min.
IPM	80 inch/min.
RPM	3,200 rev./min.
Milling Method	Trochoidal Cutting

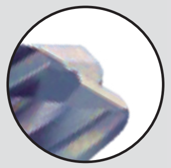
Size(inch)	5/8(R.12") x 5/8 x 1-1/2(2") x 4"
Work Material	Ti6Al4V (HRc 36 / HB 336)
Tool Holder	Shrink Fit
SFM	275-375 ft/min.
IPM	20-45 inch/min.
RPM	1680-2292 rev./min.
Milling Method	Helical Ramping, Pocket, Ramping, Profile and Slotting
Ap	.300" - 1.500"
Ae	.050" - .625"
Ramping	1°- 1-1/2°
Helical Interpolation	0.5°
Coolant	Water-Based
Machine	Machining Center

V7 PLUS A End mills

- Chatter and Harmonics Reduced for Improved Stability and Better Finishing
- Special Design of Flute Geometry for Optimal Chip Formation and Chip Evacuation
- Engineered Coating Technology to Reduced Wear and Increase Heat Resistance
- Enhanced Corner Geometry for Longer Tool Life

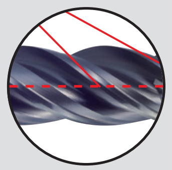
Unequal Index

Exclusively Designed Unique Geometry applied to Reduce Vibration and also to achieve Excellent Chip Evacuation with Better Surface Finish



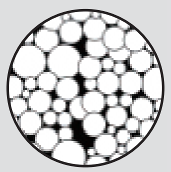
Corner Geometries

YG-1's High Performance Corner Geometries Including Corner Radius, applied for Longer Tool Life with Higher Cutting Speed and Heavy Cutting



Multiple Helix

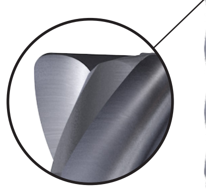
Multiple Helix Designed for Optimal Chip Formation and Chip Evacuation Concluding Faster and Heavier Cutting making Higher Productivity

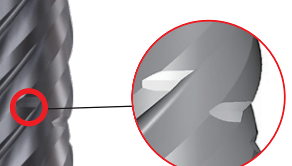


Ultra Micro grain Carbide

Premium Carbide Substrate Achieving Exceptional Wear Resistance

6 FLUTE CHIP SPLITTER





Unequal Index

Exclusively Designed Unique Geometry applied to Reduce Vibration and also to achieve Excellent Surface Finish

Corner Geometries

YG-1's High Performance Corner Geometries Including Corner Radius, applied for Longer Tool Life with Higher Cutting Speed

Chip Splitters

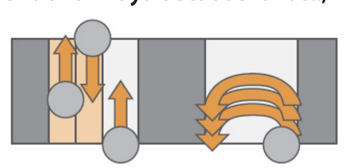
Special Chip Splitter Design Shorter Chip Length at High Axial Machining, improving Chip Removal from both the Component and the Machine

6 FLUTE END MILLS

The Best Chatter Free Tool For High Speed

- Unique geometry of the variable pitch provides the best chatter free tool for high speed and also trochoidal milling
- Several slot widths can be used with the same tool diameter in an efficient way
- Provides longer tool life and higher productivity on most materials
- Trochoidal milling is a programming technique applying a small radial width of cut with also higher cutting speed and feed per tooth

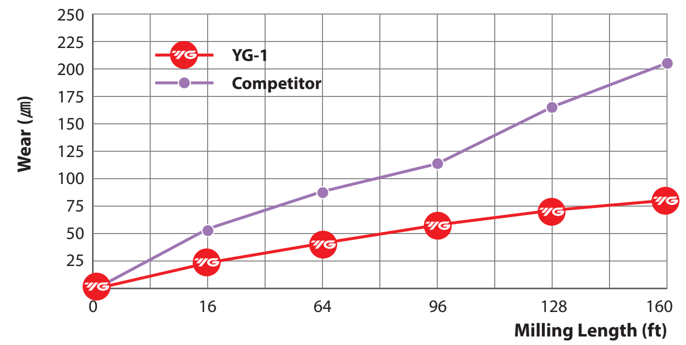
Trochoidal Milling performs better than conventional ways because it has..,



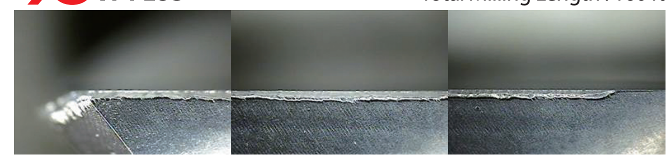
- Lower Cutting Force from smaller arc engagement
- Longer Tool Life from more flutes, and deeper cutting depth
- Higher Stability, Lower Vibration and Excellent Chip Evacuation

V7 PLUS A End mills

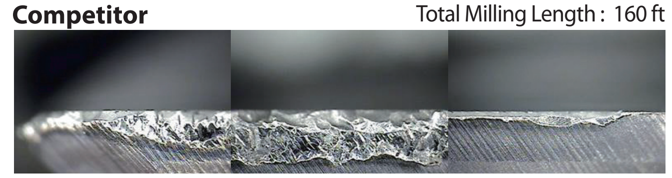
TEST I 4 Flute



V7 PLUS Total Milling Length : 160 ft



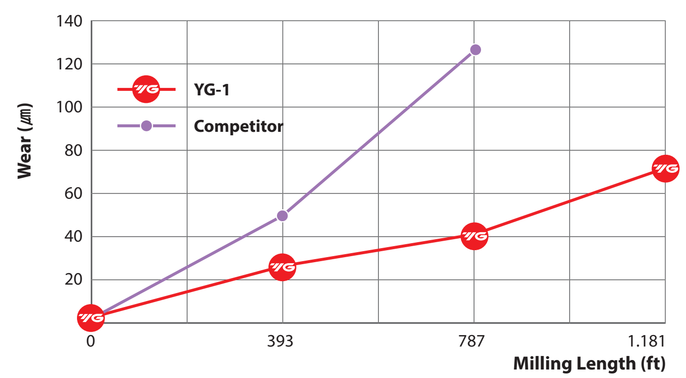
Competitor Total Milling Length : 160 ft



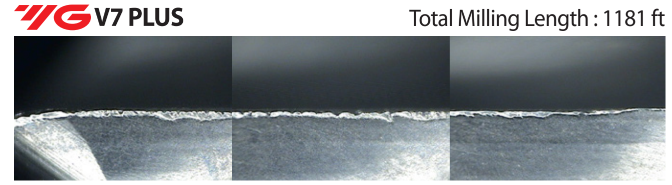
Cutting Condition (Side Cutting)

Tool	V7 Plus	4Flute
Size	Ø10 x Ø10 x 22 x 72	
Work Material	- JIS : S45C(HRc30) - DIN : C45 - AISI : 1045	
SFM (ft/min.)	754	
RPM (rev./min.)	7,324	
IPM (inch/min.)	57.64	
IPT (inch/tooth)	.002	
Milling Depth (inch)	Axial : .394" / Radial : .118"	
Coolant	Wet Cut	
Overhang (inch)	1.339"	
Machine	Machining Center	

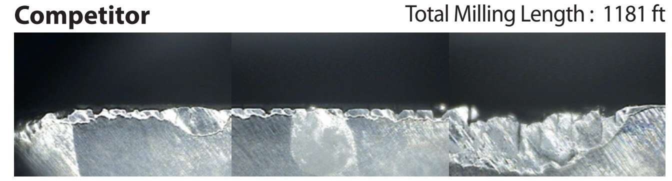
TEST II 6 Flute



V7 PLUS Total Milling Length : 1181 ft



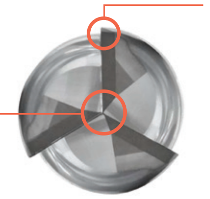
Competitor Total Milling Length : 1181 ft



Cutting Condition (Trochoidal Cutting)

Tool	V7 Plus	6Flute
Size	Ø12(R1) x Ø12 x 26 x 83	
Work Material	- JIS : S45C(HRc30) - DIN : C45 - AISI : 1045	
SFM (ft/min.)	914	
RPM (rev./min.)	7,392	
IPM (inch/min.)	295.08	
IPT (inch/tooth)	.007	
Milling Depth (inch)	Axial : .945" / Radial : .024"	
Coolant	Wet Cut	
Overhang (inch)	1.417"	
Machine	Machining Center	

ALU-POWER HPC End mills

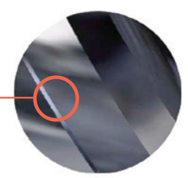


Available in a Wide Variety of Sizes and Corner Radii Ideal Symmetrical Shape

- 3-flute design "to the center" (all 3 flutes come to center)
- Designed with high spindle speeds in mind
- Highly effective in vertical ramping up to 20 degrees and step-over plunging applications

Specialized Design of Corner Gash

- Unique flute design and superior corner protection enhance both tool life and protection against catastrophic failure in high feed applications
- Polished flutes for excellent chip flow



Cylindrical Land

- Increased performance in a variety of cutting conditions
- Helps reduce vibration and chatter

Engineered Flute Design

- Effective chip evacuation at high feed rates
- with lower cutting forces than competitive products

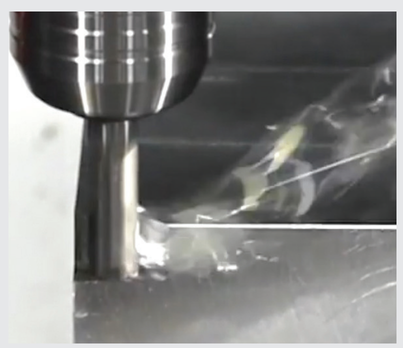
From Side Cuts to Rough Cuts to Aggressive Ramping, No One Withstands Extreme Radial Forces Better-or Longer.

▲ Rough Cutting

Ultra-micrograin carbide supplies the rigidity to keep the chips flying. Highly polished 3-flute design ensures they'll keep flying – cut after cut.

▲ Ramping

In steep, aggressive ramping conditions, the ALU-POWER HPC holds its own to resist the torsional stress from extreme helical output.



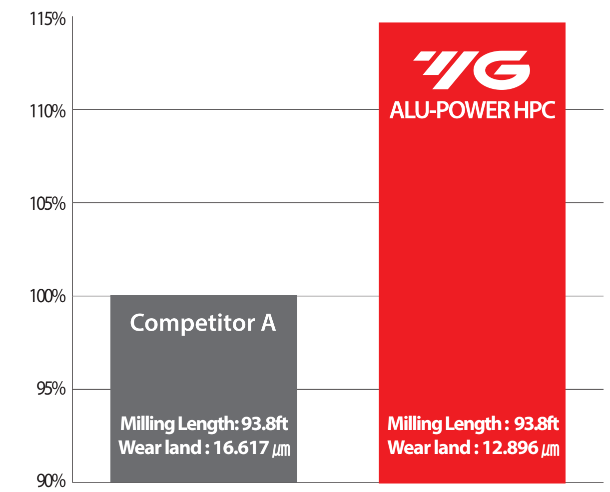
▲ Side cutting

No one offers a cooler-running super high-speed End mill.
While others melt down the materials they're cutting, ALU-POWER HPC keeps machining cool in aluminum and soft alloys, to boot.

ALU-POWER HPC End mills

TEST I Slotting Application

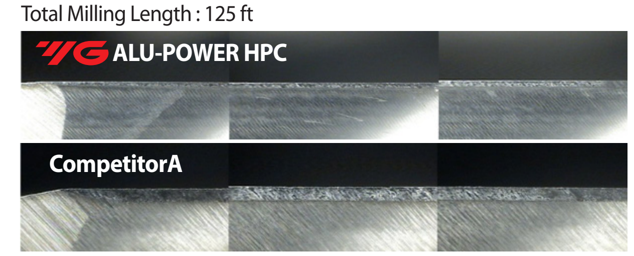
Ø1/2(R.090) 3 Flute Corner radius End Mill, Alu-Power HPC



Cutting Condition (Slotting)

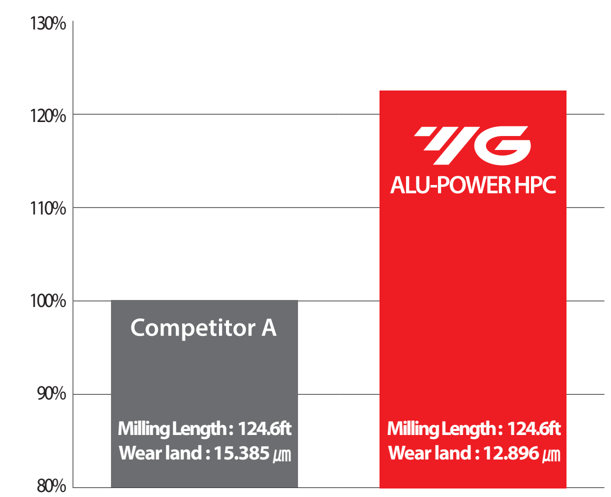
Tool	Ø1/2(R.090) x Ø1/2 x 1-1/4 x 3-1/2
Work Material	AL7075
R.P.M (rev./min.)	12,224
IPM (inch/min.)	.500"
Cutting Depth (inch)	Axial : .5
Coolant	Wet Cut (9% emulsion)
Overhang (inch)	1.89"
Milling Method	Slotting
Machine	Machining Center

Total Milling Length : 125 ft



TEST II Pocketing Application

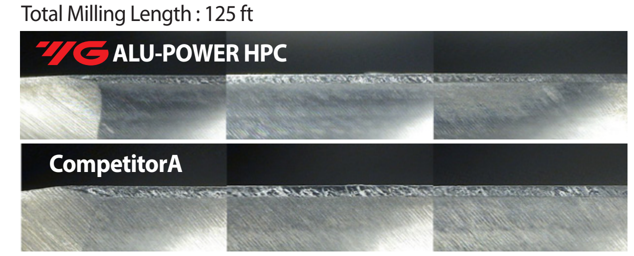
Ø1/2(R.090) 3 Flute Corner radius End Mill, Alu-Power HPC

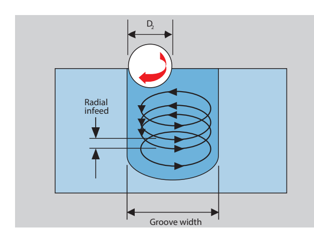


Cutting Condition (Pocketing)

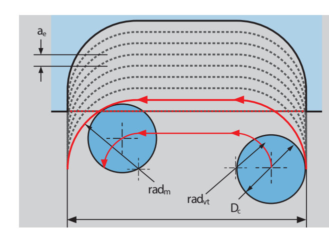
Tool	Ø1/2(R.090) x Ø1/2 x 1-1/4 x 3-1/2
Work Material	AL7075
R.P.M (rev./min.)	12,224
Feed (inch/min.)	220
Cutting Depth (inch)	Axial : .500" Radial : .480"
Coolant	Wet Cut (9% emulsion)
Overhang (inch)	1.89"
Milling Method	Pocketing
Machine	Machining Center

Total Milling Length : 125 ft

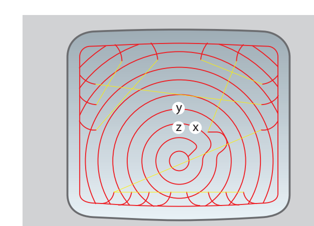




In trochoidal milling applications, the cutter follows a spiral path by moving radially as it rotates providing faster machining times, lower tooling costs and reduced loads on machine components.



Peel milling applications benefit from ALU-POWER HPC's super sharp high-speed milling ability.

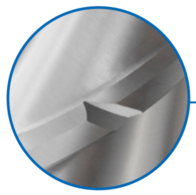


Outstanding chip evacuation through deep gullet design coupled with high speed milling leaves **a well-defined clean cutter path.**

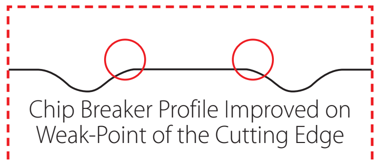
ALU-POWER HPC CHIP BREAKER

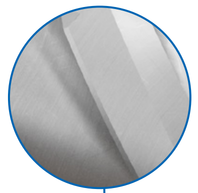
3-FLUTE END MILLS

- Unique Geometry provides the Balance cutting with less vibration during the High Speed Machining.
- Provides long tool life and high productivity on aluminum by Chip breaker releasing stresses on the tool and prevents acceleration rate of wear on the cutting edge.
- Chip Breaker Improves chip evacuation by shortening the chip length during the High Speed Machining.

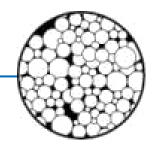


Chip Breakers
- Through Special Chip Breaker Design, the length of the chip is formed short to improve chip evacuation performance.





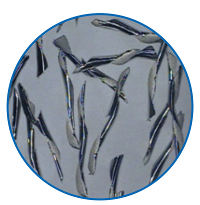
Cylindrical Land
- Improves tool performance by reducing vibration and chattering in high-speed processing.



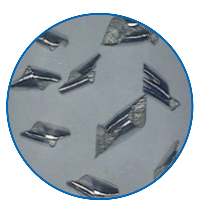
Premium Tungsten Carbide
- Excellent wear resistance by using Premium Carbide material.

DLC Diamond-Like Carbon
- Excellent in high-speed processing in the Aluminum area.
- Superior tool life by complementing rigidity to cutting edge.

Optimized Chip Breaker Profile Design
- Optimized Chip Breaker Profile design boasts the best performance in Aluminum high-speed processing.



General End mill Chip Geometry



Chip Breaker End mill Chip Geometry

Unique Geometries
- Applied suitable Flute Design for Aluminum high speed machining to have an effective chip evacuation effect.
- Excellent Corner Protect Design improves tool life.

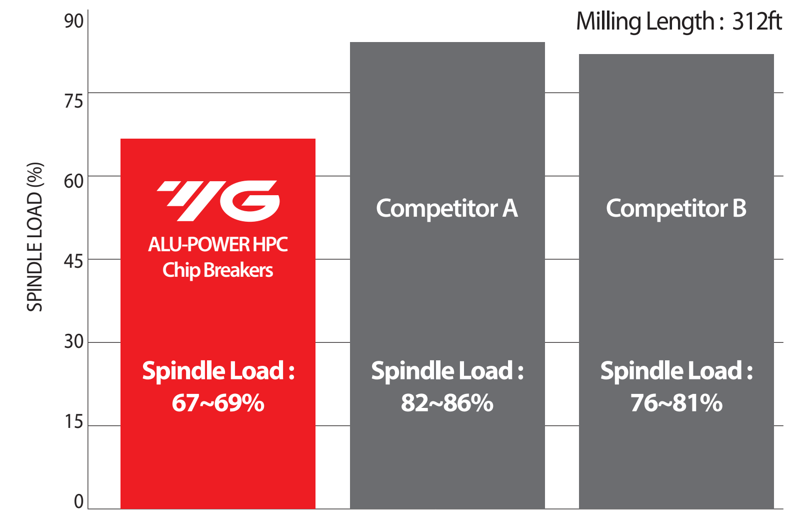
ALU-POWER HPC CHIP BREAKER

TEST Chip Breakers - Side Cutting Application

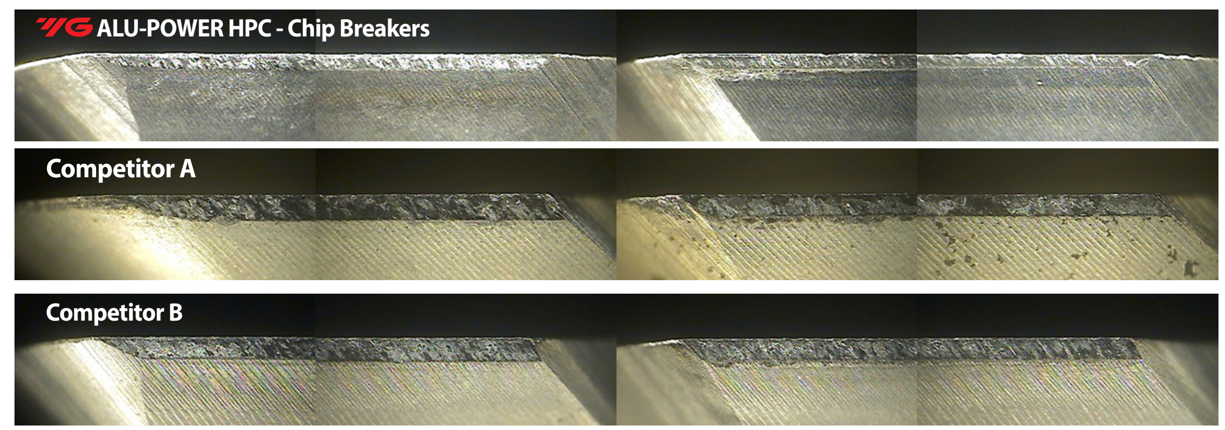
Ø1/2(R.03") 3 Flute Chip Breakers

Cutting Conditions	
Tool	1/2(R.03) x 1/2 x 1-1/4 x 3
Work Material	Al7075
R.P.M (rev./min.)	16,800
IPM (Feed, in/min.)	151
Cutting Depth (in)	.750 (Axial=1.5D) .175 (Radial=0.35D)
Coolant	Wet Cut
Holder	BT40 - High Feed Milling Chuck
Milling Method	Profiling
Machine	Machining Center

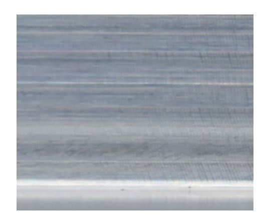
Cutting Resistance



Cutting Edge (Total Milling Length : 312ft)



Surface Roughness



ALU-POWER HPC Chip Breakers
Milling Length = 312ft
(Ra : 13μin)

Competitor A
Milling Length = 312ft
(Ra : 49μin)

Competitor B
Milling Length = 312ft
(Ra : 26μin)

ONLY ONE Coated PM60 End Mills

ADVANTAGES OF CARBIDE	ADVANTAGES OF HSS

Exceptional Wear Resistance

The ONLY ONE holds an Exceptional Wear Resistance Which is an advantage of the micro-grain carbide tools.

The ONLY ONE performs better without Causing chipping than Normal coated carbide End mills under the same carbide cutting conditions.

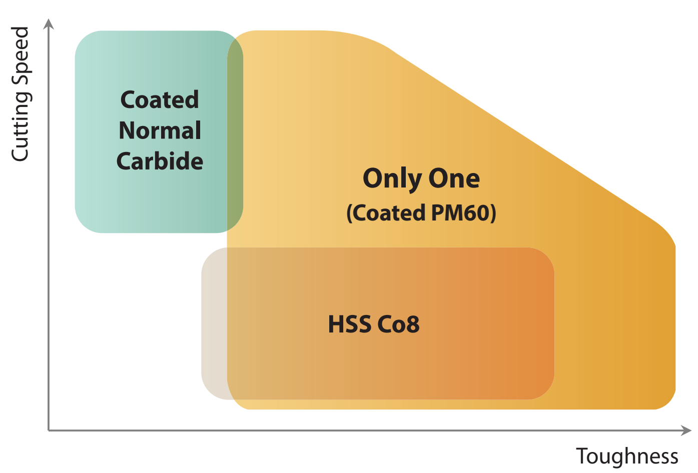
High Toughness

ONLY ONE is based on Powder Metallurgy that ensures High Toughness which is one of the advantages of Cobalt HSS

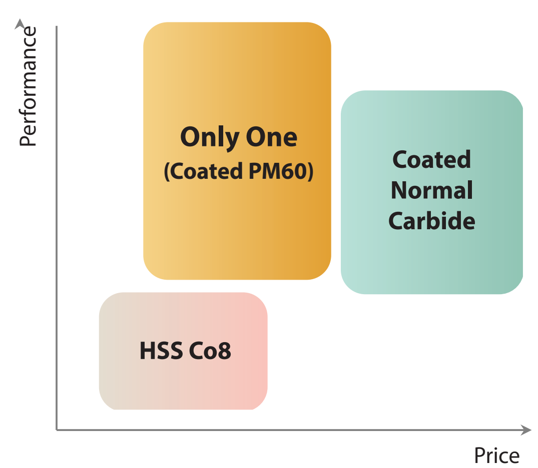
The ONLY ONE holds a very Strong Toughness which can bring out Higher performances also on Machines with unstable conditions such as Vibration and irregular composition of materials

Both Advantages of Solid Carbide & HSS

To protect chipping problems under the unstable machining conditions with vibration



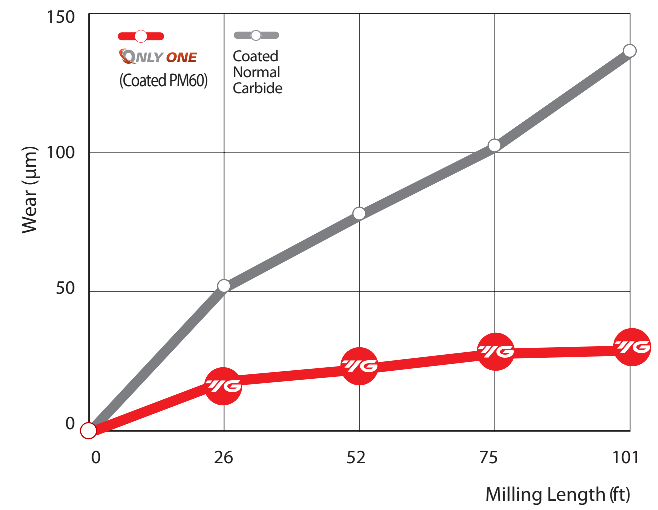
Higher Toughness than HSS Co8,
Cutting Speed (Vc) is as high as Coated Normal Carbide.



Better performance than HSS Co8,
Better price than Coated Normal Carbide.

ONLY ONE Coated PM60 End Mills

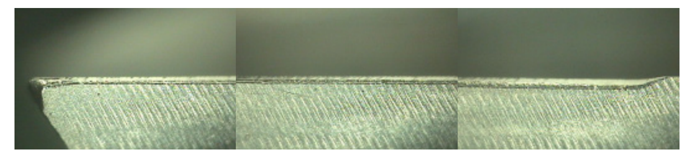
TEST I 4 Flute Square End mill



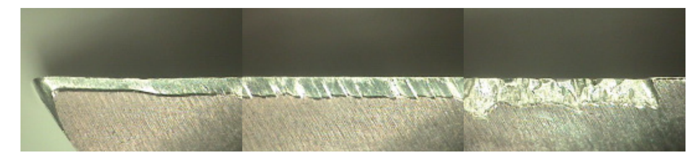
Cutting Condition (Down & Side Cutting)

Tool	Only One Coated PM60 / Coated Normal Carbide
Size	Ø10xØ10x22x72/Ø10xØ10x22x70
Work Material	- JIS : S45C - KS : SM45C - DIN : C45 - AISI : 1045
RPM (rev./min.)	2,750
IPM (inch/min.)	20.47
Milling Method (inch)	Axial : 12˝ / Radial : .04˝
Coolant	Wet Cut
Machine	Machining Center

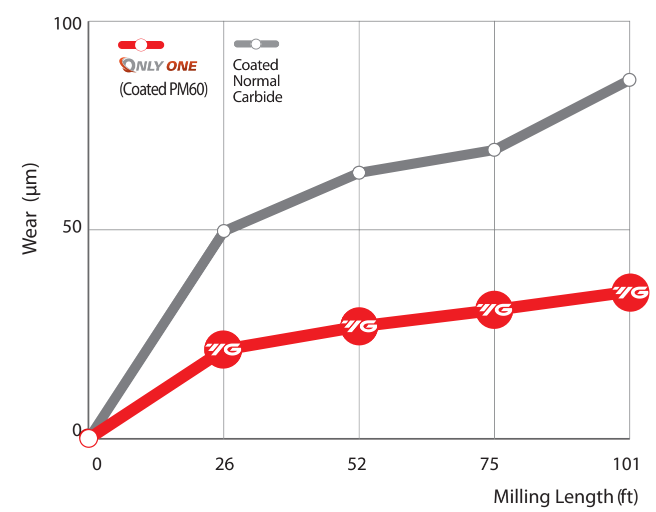
ONLY ONE Coated PM60



Coated Normal Carbide



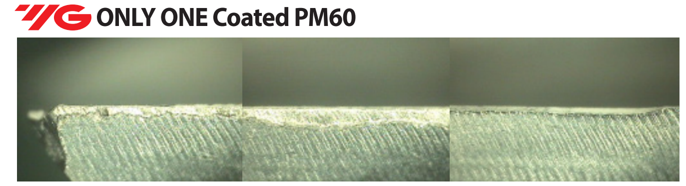
TEST II 4 Flute Square End mill



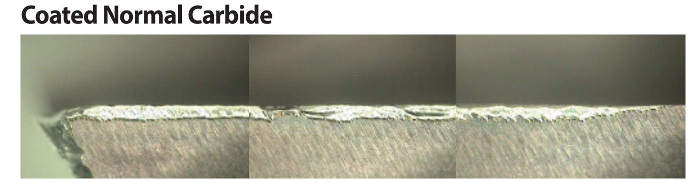
Cutting Condition (Down & Side Cutting)

Tool	Only One Coated PM60 / Coated Normal Carbide
Size	Ø10xØ10x22x72/Ø10xØ10x22x70
Work Material	- JIS : S45C - KS : SM45C - DIN : C45 - AISI : 1045
RPM (rev./min.)	2,750
IPM (inch/min.)	20.47
Milling Method (inch)	Axial : .39˝ / Radial : .04˝
Coolant	Wet Cut
Machine	Machining Center

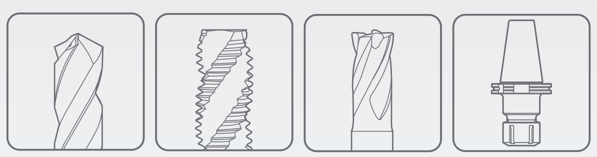
ONLY ONE Coated PM60



Coated Normal Carbide



Global Cutting Tool Leader **YG-1**



YG-1 COATING TECHNOLOGIES

Coating (Icon) Beschichtung (Ikone)	Coating Color Beschichtungsfarbe	Coating Type Beschichtungsart	Hardness (Hv) härtegrad	Max. Usage Temperature (℃) Max. Arbeitstemperatur	Friction Coefficient (dry) Reibungskoeffizient für stahl (trocken)	Coating Thickness (㎛) Beschichtungsdicke	General Information Allgemeine Informationen
TiN Coating TiN	Gold 	Titanium Nitride	2,300	600	0.40	1 ~ 5	• Making it possible to higher performance in comparison to traditional non-coated tools • Recommended for the general application
TiCN Coating TiCN	Blue grey 	Titanium Carbon Nitride	3,400	400	0.25	1 ~ 5	• Characterized by high hardness and good toughness • Providing tools with effective protection against cold-welding from especially wear resistant and its low coefficient of friction
TiAlN Coating TiAlN	Violet grey 	Titanium Alumium Nitride	3,100	900	0.50	1 ~ 5	• Increase in hardness and an exceptional increase in resistance to oxidation at high temperature, compared to conventional coatings • Application to drilling with severe thermal stress on cutting edges when continuous non-step feed, dry cutting or high speed cutting
AlTiN Coating AlTiN	Blue grey 	Alumium Titanium Nitride	3,300	900	0.40	1 ~ 5	• Optimised coating for use in hard and high-speed machining with the high hardness, oxidation resistance and thermal stability • Protection against abrasion and adhesion over the whole range of cutting speeds with high-strength and hard-to-machine materials • The good frictional properties reduce cutting forces

Coating (Icon) Beschichtung (ikone)	Coating Color Beschichtungsfarbe	Coating Type Beschichtungsart	Hardness (Hv) härtegrad	Max. Usage Temperature (℃) Max. Arbeitstemperatur	Friction Coefficient (dry) Reibungskoeffizient für stahl (trocken)	Coating Thickness (㎛) Beschichtungsdicke	General Information Allgemeine Informationen
X Coating X Coating	Blue grey 	AlCrN Based	3,200	1,100	0.35	1 ~ 5	• Coating with low hardness drop at high temperatures and stability against thermal oxidation • Coating for superior dry and wet machining performance at high cutting speed • Wide range of application field with stable layer structure
Y Coating Y Coating	Bright grey 	AlCrN Based	3,200	1,100	0.35	1 ~ 5	• Optimized coating adhesion results in high-level reliability • High thermal shock stability and oxidation resistance for wet and dry machining • Significantly lengthened tool lifetimes as compared to common high-performance coatings • Good chip removal and minimization of built-up edge formation
H Coating H Coating	Copper 	AlCrN Based	3,000	1,100	0.25	1 ~ 5	• Improved wear resistance compared to TiAl-based, and superior high temperature hardness • Superior adhesion and surface roughness, and uniform tool wear characteristics with multi-layer coating • Possible machining with minimum quantity of coolant and dry machining to reduce production costs
Hardslick Coating Hardslick	Black grey 	TiAlN Based	3,000	800	0.20	1 ~ 5	• Reduced the coefficient of friction, and enhance the corrosion resistance of anodic coating • Ideal for applications requiring fast chip evacuation, such as molds, or additional chemical and corrosion resistance

Coating (Icon) Beschichtung (ikone)	Coating Color Beschichtungsfarbe	Coating Type Beschichtungsart	Hardness (Hv) härtegrad	Max. Usage Temperature (℃) Max. Arbeitstemperatur	Friction Coefficient (dry) Reibungskoeffizient für stahl (trocken)	Coating Thickness (㎛) Beschichtungsdicke	General Information Allgemeine Informationen
Blue Coating BLUE	Blue violet 	Si Based	3,700	1,200	0.40	1 ~ 5	• Nanocomposite with Si Content for high hardness steel • Extraordinary high temperature stability • Excellent adhesion and good performace even for more unusual applications
Z Coating Z Coating	Copper 	Si Based	4,000	900	0.40	1 ~ 5	• Nanocomposite optimized among coatings for high hardness steel machining with Si grade coating • Superior machinability at high temperatures and used in milling and drilling finishing processes • Superior physical properties of hardness, adhesion and oxidation resistance at high temperatures
DLC (Diamond Like Carbon) **Coating** DLC	Black 	Carbon	4,000 ~ 5,000	500	0.01~0.1	0.5 ~ 1.5	• Suitable coating for extreme wear conditions and fast cutting speeds without use of coolant • Possible coating with high-speed machining and superior wear resistance
Diamond Coating Diamond	Grey 	Carbon	10,000	600	~ 0.1	5 ~ 15	• Possible to cut graphite workpieces with high-speed cutters at greater speeds and in significantly better quality • Making it possible to produce sophisticated workpieces from a single clamping to a single cutter • Enable controlled coating structures and compliance with the most stringent tolerance limits

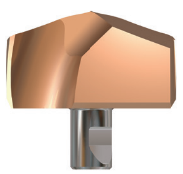
YG *i*-ONE DRILLS

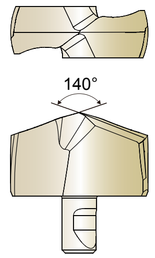
Y101H SERIES

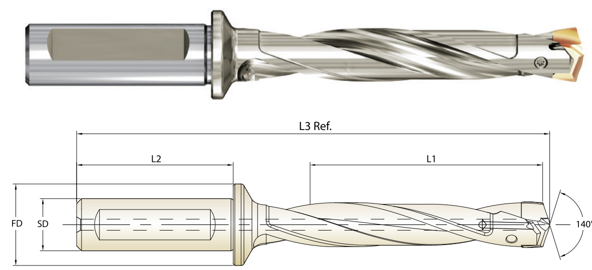
i-ONE DRILL INSERTS & HOLDERS

▶ Applications
- For carbon steels, alloy steels and cast iron
- Holder length: 3xD, 5xD, 8xD

▶ Benefits
- Secure and quick clamping system
- High performance with cost efficiency
- Multi-layered coating delivers outstanding productivity and reliability







p.A42

Y181H SERIES

i-ONE DRILL INSERTS & HOLDERS

▶ Applications
- For carbon steels, alloy steels and cast iron
- Holder length: 3×D, 5×D, 8×D

▶ Benefits
- Secure and quick clamping system
- High performance with cost efficiency
- Multi-layered coating delivers outstanding productivity and reliability

YG *i*-ONE DRILLS

Y281H SERIES

i-ONE DRILL INSERTS & HOLDERS

▶ Applications
- For carbon steels, alloy steels and cast iron
- Holder length: 3XD, 5XD, 8XD

▶ Benefits
- Secure and quick clamping system
- High performance with cost efficiency
- Multi-layered coating delivers outstanding productivity and reliability

▶ The recommendations for speeds, feeds and other parameters presented in this chart are nominal recommendations and should be considered only as good starting points.
Speed and feed reductions (20% reduction in speed and 10% reduction in feed) are recommended.

▶ Recommend you to reduce the feed rate to 85%, 70% when you use 5xD, 8xD holders.

▶ For use of 8xD holder, we recommend to use a pilot drill with equal to or larger than 140º point angle (0.5xD ~ 1.5xD).
The use of the centering pre-hole improves hole location, roundness and surface finish.

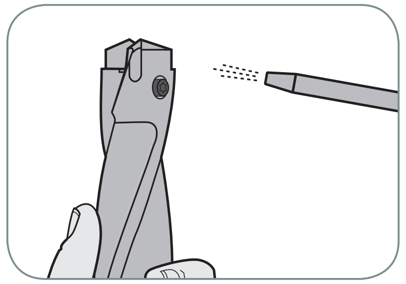
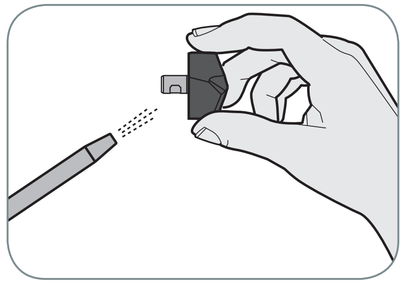
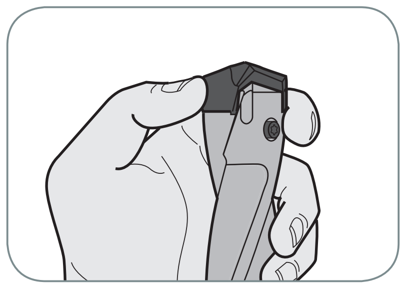
ASSEMBLY OF *i*-ONE DRILLS

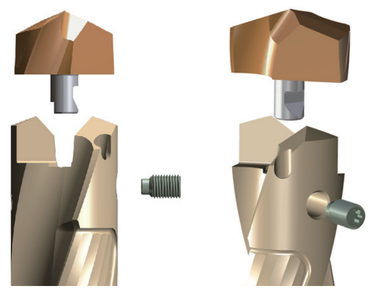


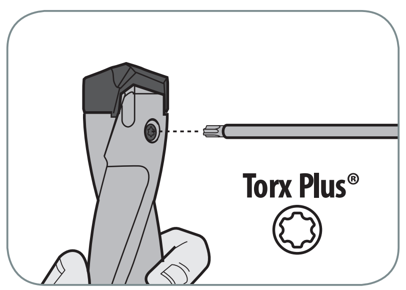


Make sure to clean the insert and insert seat.



Slide the drill insert into the slot of the holder and press down the insert to touch the bottom of the slot.





After confirming the insert is pressed down to the bottom of the slot, tighten the screw using anti-seize compound.

Wrench Type	Product No.	Series (Insert Size)	Torx Plus®	Torque (lbs-in)
	TWFP05	S10 ~ S12 Inch: Ø.3937~ Ø.5472 Metric: Ø10.00~ Ø13.90	5IP	5.5
	TWDP07	S14 ~ S16 Inch: Ø.5512~ Ø.7047 Metric: Ø14.00~ Ø17.90	7IP	9.0
	TWDP09	S18 ~ S22 Inch: Ø.7087~ Ø.9409 Metric: Ø18.00~ Ø23.90	9IP	13.5
	TWDP10	S24 ~ S28 Inch: Ø.9449 ~ Ø1.1772 Metric: Ø24.00 ~ Ø29.90	10IP	20.0
	TWDP15	S30 ~ S32 Inch: Ø1.1811~ Ø1.3346 Metric: Ø30.00~ Ø33.90	15IP	28.5

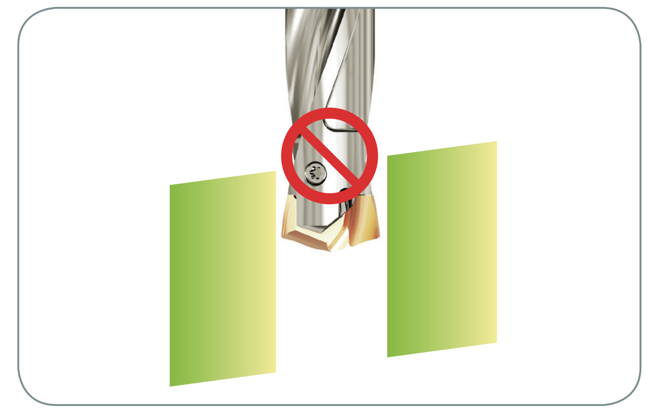
Use the Torx Plus® wrench

- ▶ Need to use appropriate wrenches and screws as indicated.
- ▶ It's important to tighten up the screw properly.

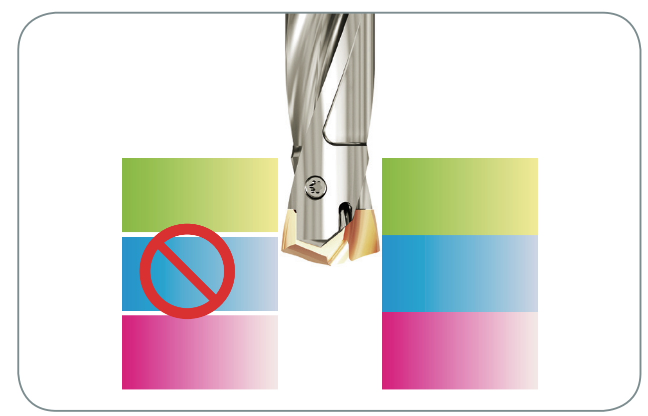
YG i- ONE DRILLS RECOMMENDED CUTTING CONDITIONS

CAUTION-NOT RECOMMENDABLE APPLICATION

Intersecting cross hole is bigger than the drill insert's Margin Length.

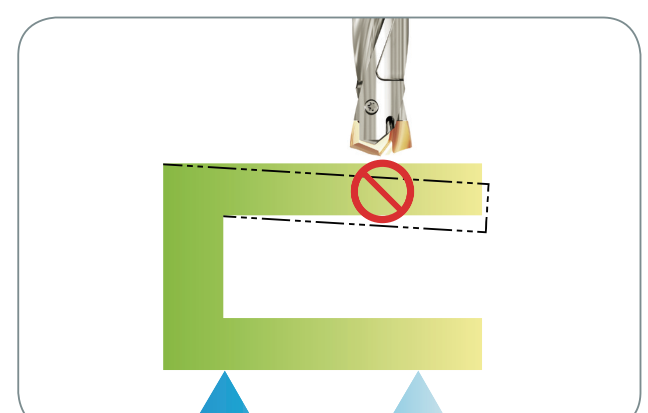


Material with slanting entrance and exit over 7 degree. (If drilling 7 degree or under slanting surface, reduce the feed about 30-50%)



For drilling stacked plates, minimize the space between the plates.

The space stacked plates can cause insert breakage or poor chip control.



The material needs to be fixtured securely before drilling.

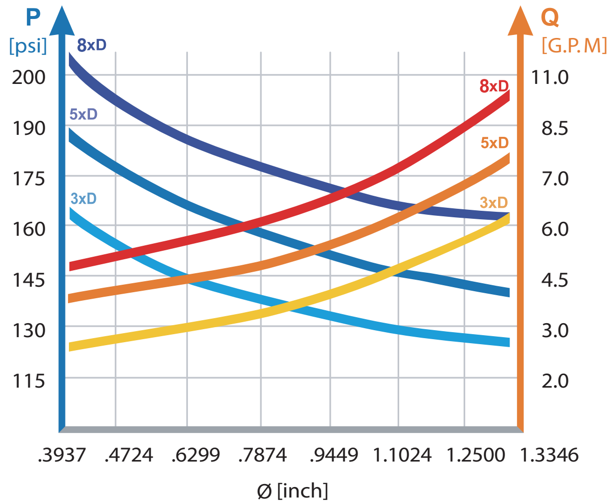
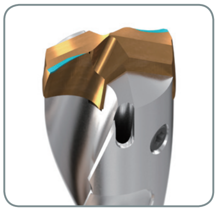
TECHNICAL DATA

RECOMMENDED COOLANT PRESSURE AND FLOW RATE ON VERTICAL DRILLING

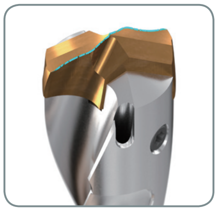


- Recommended emulsion mix is 6 - 8%.
- For Drilling in Stainless and High Strength steels, a mix of 10% is recommended.
- For horizontal drilling, 30% reduction on the coolant pressure and flow rate is possible.
- Dry drilling is possible for 1 - 2xD drilling. But not recommended.

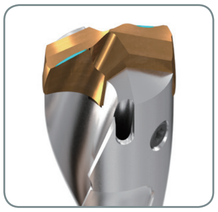
TROUBLE SHOOTING



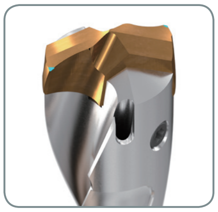
1) Heavy flank wear / Fast flank wear
   - Reduce cutting speed
   - Increase feed



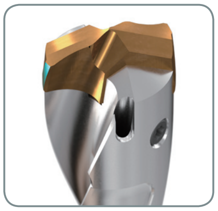
2) Chipping on cutting edge
   - Reduce feed
   - Check the rigidity of spindle and chuck
   - Rigid clamping of workpiece



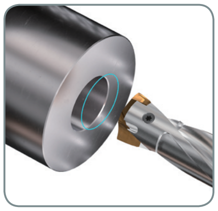
3) Build up on cutting edge
   - Increase cutting speed
   - Use a coated insert



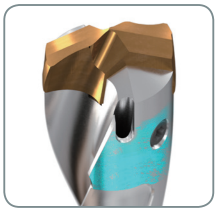
4) Chipping or break down on outer corner
   - Reduce feed
   - Rigid clamping of workpiece



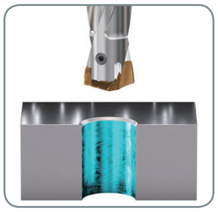
5) Wear of land margin
   - Rigid clamping of workpiece
   - Reduce cutting speed
   - Increase coolant flow



6) Unsatisfactory positioning of the hole
   - Rigid clamping of workpiece
   - Reduce feed during entrance or exit



7) Scratching on holder
   - Rigid clamping of workpiece
   - Reduce feed
   - Increase coolant flow



8) Unsatisfactory surface finish
   - Rigid clamping of workpiece
   - Increase coolant flow and pressure

i -DREAM DRILL INSERTS & HOLDERS

- Features of *i-Dream Drill* Inserts
  - ▶ Secure and accurate seating resulting in accurate repeatability and concentricity.

i-Dream Drill *General*
- ▶ For most steel materials

i-Dream Drill *INOX*
- ▶ For tough, ductile materials and stainless steels
- ▶ Light, sharp cutting edge
- ▶ Minimize cutting forces
- ▶ Reduce built-up edge

- Features of *i-Dream Drill* Holders
  - ▶ Special Alloy Steels that maintains its hardness and toughness under high temperatures with generous coolant holes for effective coolant flow.
  - ▶ Innovative surface treatment that improves wear resistance and reduces corrosion.
  - ▶ High Performance flute design allowing maximum chip evacuation and minimum interference.

i -DREAM DRILL INSERTS & HOLDERS

- Features of *i-Dream Drill* Inserts
  - ▶ Secure and accurate seating resulting in accurate repeatability and concentricity.

i-Dream Drill *General*
- ▶ For most steel materials

i-Dream Drill *INOX*
- ▶ For tough, ductile materials and stainless steels
- ▶ Light, sharp cutting edge
- ▶ Minimize cutting forces
- ▶ Reduce built-up edge

- Features of *i-Dream Drill* Holders
  - ▶ Special Alloy Steels that maintains its hardness and toughness under high temperatures with generous coolant holes for effective coolant flow.
  - ▶ Innovative surface treatment that improves wear resistance and reduces corrosion.
  - ▶ High Performance flute design allowing maximum chip evacuation and minimum interference.

▶ The recommendations for speeds, feeds and other parameters presented in this chart are nominal recommendations and should be considered only as good starting points.
Speed and feed reductions (20% reduction in speed and 10% reduction in feed) are recommended.
▶ Recommend you to reduce the feed rate to 85%, 70% when you use 5xD, 7xD holders.
▶ For use of 7xD holder, we recommend to drill a centering pre-hole with equal to or larger than 140° point angle to min. 2/3 cutting diameter.
The use of the centering pre-hole improves hole location, roundness and surface finish.

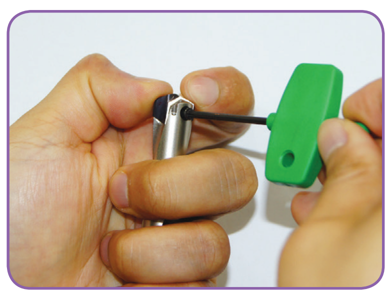
Assembly of *i*-Dream Drills

Make sure to clean the insert and insert seat.

Slide the drill insert into the slot of the holder and press down the insert to touch the bottom of the slot.

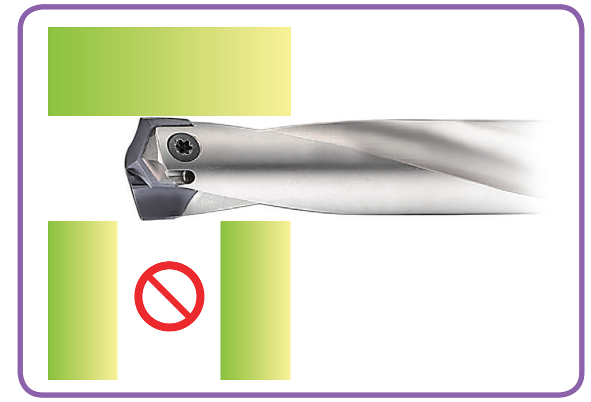


After confirming the insert is pressed down to the bottom of the slot, tighten the screw using anti-seize compound.

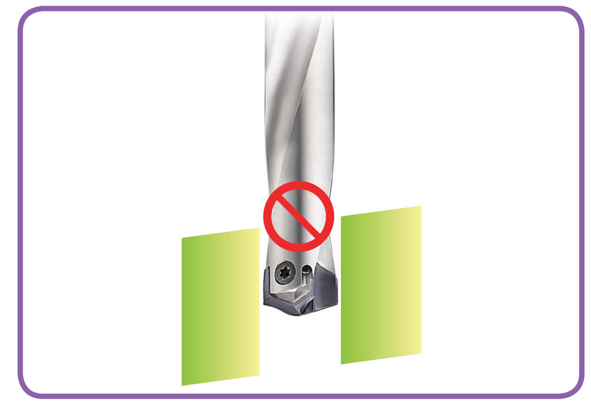
WRENCH TYPE	PRODUCT No.	T-HANDLE No.	SERIES
WING TYPE 	TWWT08	—	A
			B
			C
TORX BIT TYPE 	TWBT15	TWH600 	D
	TWBT20		E, F, G
	TWBT25		H, I, J

Use the wing type or T-type wrench.
▶ Need to use appropriate wrenches and screws as indicated.
▶ It's important to tighten up the screw properly.

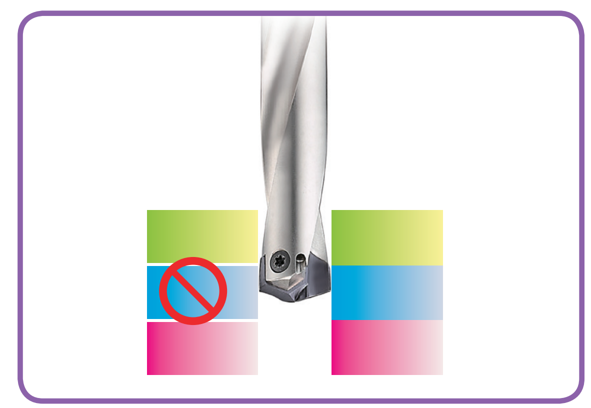
CAUTION-NOT RECOMMENDABLE APPLICATION



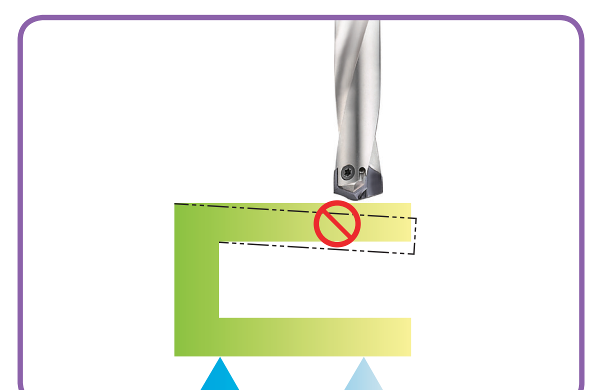
Intersecting cross hole is bigger than the drill insert's Margin Length.



Material with slanting entrance and exit over 7 degree. (If drilling 7 degree or under slanting surface, reduce the feed about 30-50 %)



For drilling stacked plates, minimize the space between the plates.
The space stacked plates can cause insert breakage or poor chip control.



The material needs to be fixtured securely before drilling.

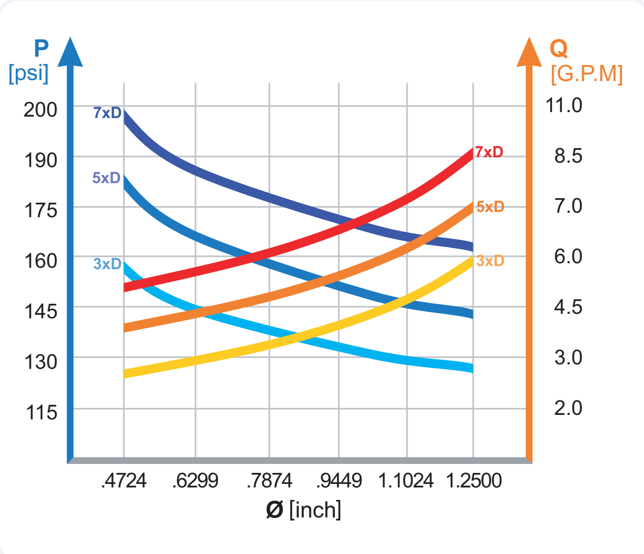
TECHNICAL DATA

RECOMMENDED COOLANT PRESSURE AND FLOW RATE ON VERTICAL DRILLING



- Recommended emulsion mix is 6% - 8%.
- For Drilling in Stainless and High Strength steels, a mix of 10% is recommended.
- For horizontal drilling, 30% reduction on the coolant pressure and flow rate is possible.
- Dry drilling is possible for 1-2xD drilling. But not recommended.

TROUBLE SHOOTING

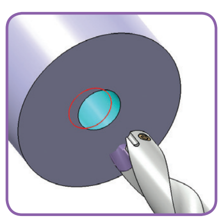
1) Heavy flank wear / Fast flank wear
- Reduce cutting speed
- Increase feed

2) Chipping on cutting edge
- Reduce feed
- Check the rigidity of spindle and chuck
- Rigid clamping of workpiece

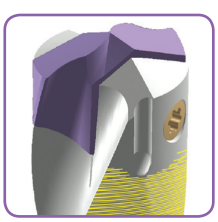
3) Build up on cutting edge
- Increase cutting speed
- Use a coated insert

4) Chipping or break down on outer corner
- Reduce feed
- Rigid clamping of workpiece

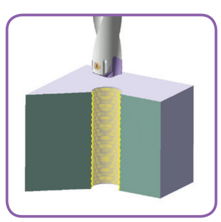
5) Wear of land margin
- Rigid clamping of workpiece
- Reduce cutting speed
- Increase coolant flow



6) Unsatisfactory positioning of the hole
- Rigid clamping of workpiece
- Reduce feed during entrance or exit



7) Scratching on holder
- Rigid clamping of workpiece
- Reduce feed
- Increase coolant flow



8) Unsatisfactory surface finish
- Rigid clamping of workpiece
- Increase coolant flow and pressure

SOLID CARBIDE

DREAM DRILLS - PRO

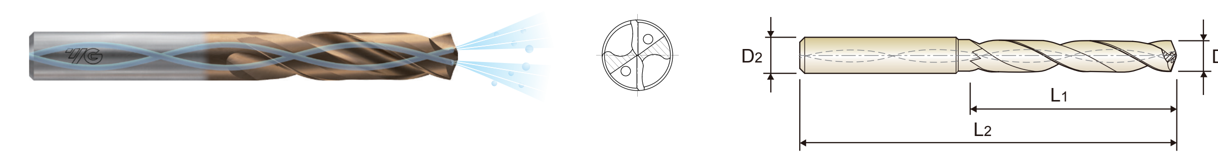
YG DREAM DRILLS -PRO

DGN506 SERIES

CARBIDE, DREAM DRILLS PRO with COOLANT HOLES

SHORT

- ▶ Drilling for Carbon Steels, Alloy Steels (HB225-325), Pre-hardened Steels (HRc30~50), Cast Iron
- ▶ Wave shape cutting edge to improve chip formation for low cutting force
- ▶ Helical thinning for low thrust, stable torque and good chip breakage
- ▶ Extremely high hardness and heat resistance due to YG-1 special Z-Coating technology



DIN 6537 | CARBIDE | 30° | h6 | m7 | 140° | 20 bar | Z Coating | p.A71~A72

YG DREAM DRILLS -PRO

DGN508 SERIES

CARBIDE, DREAM DRILLS PRO with COOLANT HOLES

LONG

- ▶ Drilling for Carbon Steels, Alloy Steels (HB225-325), Pre-hardened Steels (HRc30~50), Cast Iron
- ▶ Wave shape cutting edge to improve chip formation for low cutting force
- ▶ Helical thinning for low thrust, stable torque and good chip breakage
- ▶ Extremely high hardness and heat resistance due to YG-1 special Z-Coating technology

DGN508 SERIES

CARBIDE, DREAM DRILLS PRO with COOLANT HOLES

LONG

- ▶ Drilling for Carbon Steels, Alloy Steels (HB225-325), Pre-hardened Steels (HRc30~50), Cast Iron
- ▶ Wave shape cutting edge to improve chip formation for low cutting force
- ▶ Helical thinning for low thrust, stable torque and good chip breakage
- ▶ Extremely high hardness and heat resistance due to YG-1 special Z-Coating technology

p.A71~A72

DH711 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
General with Coolant Holes (3XD)

- ▶Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
- ▶Self centering and chip breaking by R-thinning
- ▶Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
- ▶Optimized flute shape for strength of drilling and smooth chip evacuation
- ▶Tolerance : Dia. Tolerance ØD1: See page A405

YG DREAM DRILLS -GENERAL

DH418 SERIES
DH712 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS

General with Coolant Holes (5XD)

- ▶Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
- ▶Self centering and chip breaking by R-thinning
- ▶Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
- ▶Optimized flute shape for strength of drilling and smooth chip evacuation
- ▶Tolerance : Dia. Tolerance ØD1: See page A405
  Shank Tolerance ØD2: -.0001 -.0005

YG DREAM DRILLS -GENERAL

DH406 SERIES

TiAIN-COATED SOLID CARBIDE DREAM DRILLS
General with Coolant Holes (3XD)

- ▶Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
- ▶Self centering and chip breaking by R-thinning
- ▶Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
- ▶Optimized flute shape for strength of drilling and smooth chip evacuation

DREAM DRILLS -GENERAL
DH408 SERIES
TiAlN-COATED SOLID CARBIDE DREAM DRILLS
General with Coolant Holes (5XD)
▶ Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
▶ Self centering and chip breaking by R-thinning
▶ Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
▶ Optimized flute shape for strength of drilling and smooth chip evacuation

DREAM DRILLS -GENERAL

DH421 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS

General with Coolant Holes (8XD)

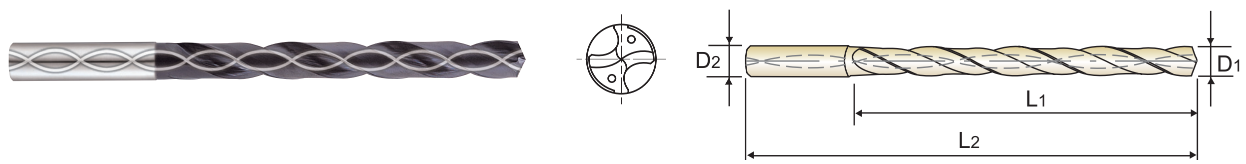
- Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
- Self centering and chip breaking by R-thinning
- Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
- Optimized flute shape for strength of drilling and smooth chip evacuation



DIN 6537 | CARBIDE | h6 | m7 | 140° | 20 bar | TiAlN

p.A104~A105

DREAM DRILLS -GENERAL

DH414 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
General without Coolant Holes (3XD)

- ▶ Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
- ▶ Self centering and chip breaking by R-thinning
- ▶ Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
- ▶ Optimized flute shape for strength of drilling and smooth chip evacuation
- ▶ Tolerance : Dia. Tolerance ØD1: See page A405
  Shank Tolerance ØD2: -.0001 -.0005

DREAM DRILLS -GENERAL

DH722 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
General without Coolant Holes (5XD)

- ▶Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
- ▶Self centering and chip breaking by R-thinning
- ▶Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
- ▶Optimized flute shape for strength of drilling and smooth chip evacuation
- ▶Tolerance : Dia. Tolerance ØD1: See page A405
  Shank Tolerance ØD2: -.0001 -.0005

DREAM DRILLS -GENERAL

DH423 SERIES

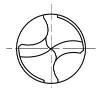
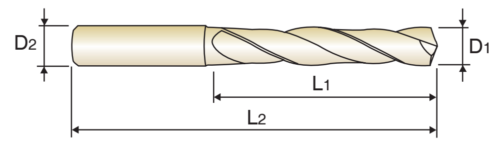
TiAlN-COATED SOLID CARBIDE DREAM DRILLS

General without Coolant Holes (3XD)

- ▶Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
- ▶Self centering and chip breaking by R-thinning
- ▶Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
- ▶Optimized flute shape for strength of drilling and smooth chip evacuation





DIN 6537 | CARBIDE | h6 | m7 | 140° | TiAlN | p.A106~A107

DREAM DRILLS -GENERAL

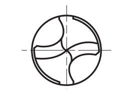
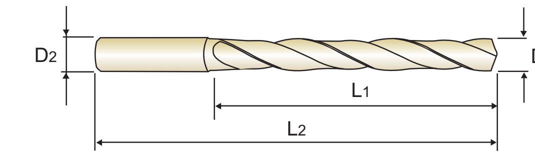
DH424 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS

General without Coolant Holes (5XD)

- Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
- Self centering and chip breaking by R-thinning
- Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
- Optimized flute shape for strength of drilling and smooth chip evacuation





DIN 6537 | CARBIDE | h6 | m7 | 140° | TiAlN

p.A106~A107

YG DREAM DRILLS -GENERAL

DH424 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
General without Coolant Holes (5XD)

▶Drilling for Steel, Cast Steel, Cast Iron, Malleable Cast Iron
▶Self centering and chip breaking by R-thinning
▶Wave shape and negative land on the cutting edge for low thrust, stable torque and long tool life
▶Optimized flute shape for strength of drilling and smooth chip evacuation

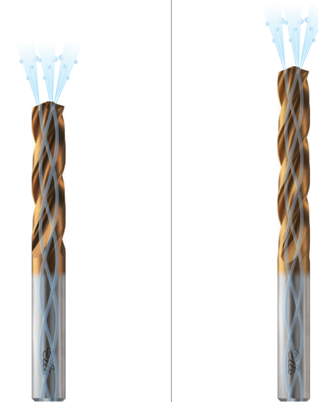
SOLID CARBIDE DREAM DRILLS HIGH FEED

- 1.5 to 2 Times Faster Feeding Speed than 2-Flute Drill
For carbon Steels, alloy Steels(up to HRc35) and cast Iron



Please visit globalyg1.com/mat for material search

YG DREAM DRILLS -HIGH FEED

DGR493 SERIES
DGR496 SERIES

H-COATED SOLID CARBIDE DREAM DRILLS
High Feed with Coolant Holes (3XD)

- ▶Drilling for Carbon Steels, Alloy Steels(-HRc35) and Cast Iron
- ▶Higher productivity due to 1.5 to 2 times faster feeding speed than 2-flute drill
- ▶Multi-Layer coating delivers much better productivity and reliability
- ▶Self centering and chip breaking by R-thinning and coolant holes

YG DREAM DRILLS -HIGH FEED

DGR493 SERIES
DGR496 SERIES

H-COATED SOLID CARBIDE DREAM DRILLS
High Feed with Coolant Holes (3XD)

- Drilling for Carbon Steels, Alloy Steels(-HRc35) and Cast Iron
- Higher productivity due to 1.5 to 2 times faster feeding speed than 2-flute drill
- Multi-Layer coating delivers much better productivity and reliability
- Self centering and chip breaking by R-thinning and coolant holes

YG DREAM DRILLS -HIGH FEED

DGR495 SERIES
DGR497 SERIES

H-COATED SOLID CARBIDE DREAM DRILLS
High Feed with Coolant Holes (5XD)

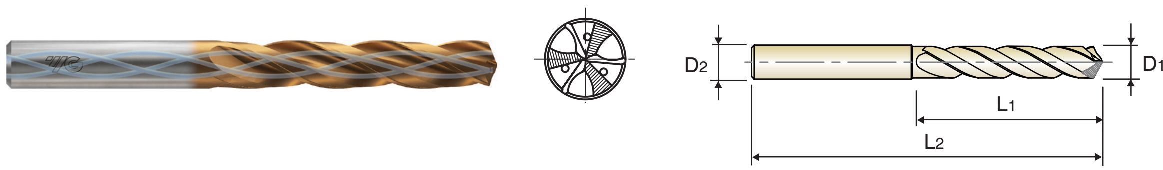
- ▶Drilling for Carbon Steels, Alloy Steels(-HRc35) and Cast Iron
- ▶Higher productivity due to 1.5 to 2 times faster feeding speed than 2-flute drill
- ▶Multi-Layer coating delivers much better productivity and reliability
- ▶Self centering and chip breaking by R-thinning and coolant holes



DIN 6537 | CARBIDE | h6 | m7 | 140° | 20 bar | H Coating

p.A119~A120

DREAM DRILLS -FLAT BOTTOM

DPP447 SERIES

X-COATED SOLID CARBIDE DREAM DRILLS
Flat Bottom without Coolant Holes (2XD)

- ▶Just ONE Drill 180 degree point angle enables drilling of horizontal surface and sloped surface
- ▶Excellent chip evacuation by optimized flute shape
- ▶High strength cutting edge to improve tool life and versatility drilling
- ▶Variety of drilling can be used in a variety of drilling applications

- ▶ The cutting conditions are for 2xD.
- ▶ The rigid and precise machine and holder are required.
- ▶ The recommended depth of hole is measured from the highest point of the hole on drilling in inclined and angled surfaces.
- ▶ The recommended cutting conditions are those for drilling on flat and horizontal surfaces.
- ▶ Please adjust feed rate according to the above surface angle when drilling on an inclined surface.
  - The recommended feed rate 50% or lower, in case of 15°~30° of the incline angle.
  - The recommended feed rate 30% or lower and RPM 70%, in case of 30° ~ of the incline angle.
- ▶ Please decrease cutting speed as material hardness increases.
- ▶ Only use drilling tool. Side milling, traversing, helical milling are not usable.

YG DREAM DRILLS -INOX

DH451 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS

INOX with Coolant Holes (3XD)

- ▶Special flute shape and geometry suitable for machining stainless steel
- ▶Excellent chip evacuation from better surface treatment
- ▶Point R-thinning achieves superior centering and chip curling
- ▶TiAlN coating for better surface finishes and longer tool life

DREAM DRILLS -INOX

DH452 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS

INOX with Coolant Holes (5XD)

▶Special flute shape and geometry suitable for machining stainless steel
▶Excellent chip evacuation from better surface treatment
▶Point R-thinning achieves superior centering and chip curling
▶TiAlN coating for better surface finishes and longer tool life

DREAM DRILLS -INOX

DH452 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
INOX with Coolant Holes (5XD)

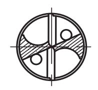
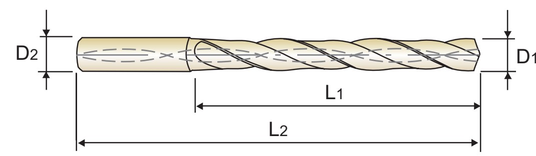
- Special flute shape and geometry suitable for machining stainless steel
- Excellent chip evacuation from better surface treatment
- Point R-thinning achieves superior centering and chip curling
- TiAlN coating for better surface finishes and longer tool life





DIN 6537 | CARBIDE | h6 | m7 | 140° | 20 bar | TiAlN | p.A147

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
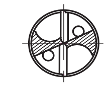
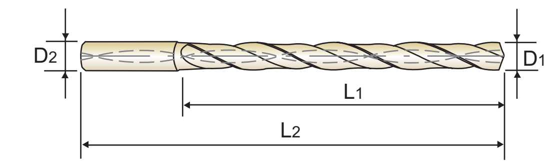
INOX with Coolant Holes (8XD)

- ▶Special flute shape and geometry suitable for machining stainless steel
- ▶Excellent chip evacuation from better surface treatment
- ▶Point R-thinning achieves superior centering and chip curling
- ▶TiAlN coating for better surface finishes and longer tool life





DIN 6537 | CARBIDE | h6 | m7 | 140° | 20 bar | TiAlN | p.A147

YG DREAM DRILLS -ALU

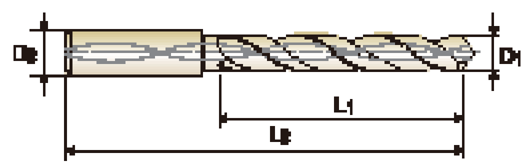
DGE433 SERIES

DLC-COATED SOLID CARBIDE DREAM DRILLS
ALU with Coolant Holes (5XD)

- ▶Optimized thining for Aluminum & Aluminum Alloys to prevent any clogging from chip welding
- ▶Wider and deeper flute gullets for maximum chip removal
- ▶Special geometry and smooth coating reduces built up edge and improves finishes



DIN 6537 | CARBIDE | h6 | m7 | 118° | 20 bar | DLC | p.A156

DREAM DRILLS -ALU

DGE433 SERIES

DLC-COATED SOLID CARBIDE DREAM DRILLS
ALU with Coolant Holes (5XD)

▶Optimized thining for Aluminum & Aluminum Alloys to prevent any clogging from chip welding
▶Wider and deeper flute gullets for maximum chip removal
▶Special geometry and smooth coating reduces built up edge and improves finishes

DREAM DRILLS MQL TYPE

DH515 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
MQL with Coolant Holes (15XD)

- ▶4-Facet Point for good centering capability
- ▶Optimized special flutes are ideal for removing chips and for productive drilling
- ▶Enhanced chip evacuation by polished flute upgraded TiAlN nano layer full coating
- ▶MQL system compatible (Minimum Quantity Lubrication)

DHM15 SERIES

TiAIN-COATED SOLID CARBIDE DREAM DRILLS

MQL with Coolant Holes (10XD, 15XD)

- ▶4-Facet Point for good centering capability
- ▶Optimized special flutes are ideal for removing chips and for productive drilling
- ▶Enhanced chip evacuation by polished flute upgraded TiAlN nano layer full coating
- ▶MQL system compatible (Minimum Quantity Lubrication)

DREAM DRILLS MQL TYPE

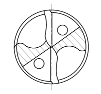
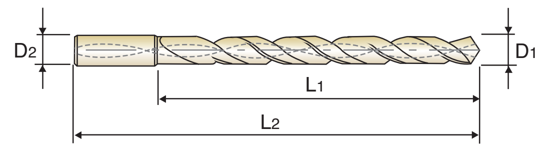
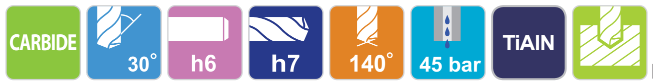
DHM30 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
MQL with Coolant Holes (30XD)

- ▶4-Facet Point for good centering capability
- ▶Optimized special flutes are ideal for removing chips and for productive drilling
- ▶Enhanced chip evacuation by polished flute upgraded TiAlN nano layer full coating
- ▶MQL system compatible (Minimum Quantity Lubrication)







p.A174

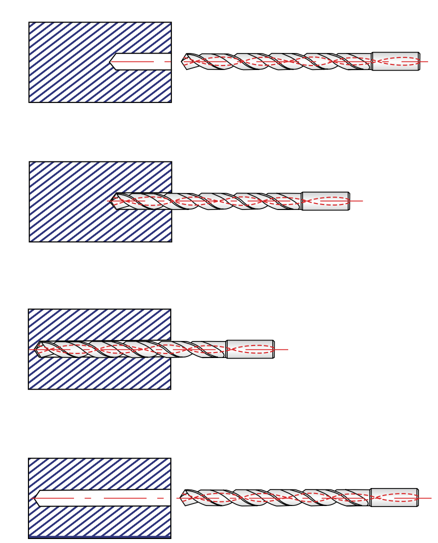
▶ Made to order in depth 35xD(Ø3-Ø6) & 40xD(Ø3-Ø6)



1. Guide Drilling should be done as Diameter +0.01~+0.1mm between 3xD and 5xD depth.
2. For Main Drilling, proceed with low RPM at Guide Drilling segment.
   (RPM 300, FEED 400mm/min)
3. Just before the end of Guide Drilling segment, reduce feed to zero and increase the RPM according to Recommended Cutting Condition chart (See above).
4. After then, proceed main drilling by increasing feed without step drilling.
5. When coming out from Guide Drilling start point after drilling, RPM should be reduced as 300 and feed should be 1000 mm/min.
6. When coming out from Guide Drilling segment to the outside, the feed should be decreased as 50%.

DREAM DRILLS for HIGH HARDENED STEELS

DH501 SERIES

TiAlN-COATED SOLID CARBIDE DREAM DRILLS
for High Hardened Steels (HRc50~70)

- ▶Drilling for High Hardened Steels; Quenched Steels, Tempered Steels (under HRc 70)
- ▶Special geometry design for Hardened Steels
- ▶Minimum of cutting load through special thinning
- ▶Performing good chip removal and powerful drilling
- ▶Tolerance : Dia. Tolerance ØD1: See page A405

MULTI-1 DRILLS

CDRA05 SERIES

HSS-PM, MULTI-1 DRILLS

- **Application :** Structural steels, Carbon steels, Alloy steels, Prehardened steels, Mold steels, Stainless steels, Hardened steels(HRc30~45), Cast iron, Aluminum alloys, Nonferrous alloys, Titanium.
- **Advantage :** Point shape to maximize self-centering.
  Flute design for the best chip evacuation.
  Premium powder materials with excellent toughness.

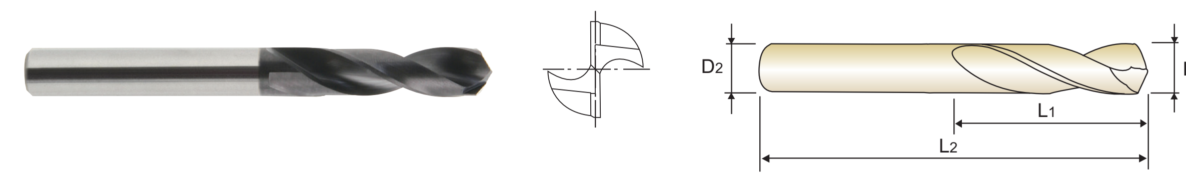
CDRA07 SERIES

HSS-PM, MULTI-1 DRILLS

▶ **Application** : Structural steels, Carbon steels, Alloy steels, Prehardened steels, Mold steels, Stainless steels, Hardened steels(HRc30~45), Cast iron, Aluminum alloys, Nonferrous alloys, Titanium.

▶ **Advantage** : Point shape to maximize self-centering.
Flute design for the best chip evacuation.
Premium powder materials with excellent toughness.



HSS-PM | 30° | h6 | h7 | 135° | p.A194

YG HPD DRILLS

DJ543 SERIES

HSS-E, HPD-SUS DRILLS

STUB

- **Application** : Designed for drilling in stainless steels, mild steels, aluminum, aluminum alloy, aluminum die cast, copper, copper alloy, etc.
- **Advantage** : Self centering - center drilling is not required
  Excellent positioning - bush is not necessary
  Special Design - reaming is not required
  - good chip removal
  - powerful drilling
- **Plain Shank** : DIN6535-HA

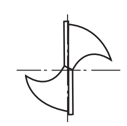
YG HPD DRILLS

DJ543 SERIES

HSS-E, HPD-SUS DRILLS

STUB

▶ **Application** : Designed for drilling in stainless steels, mild steels, aluminum, aluminum alloy, aluminum die cast, copper, copper alloy, etc.
▶ **Advantage** : Self centering - center drilling is not required
Excellent positioning - bush is not necessary
Special Design - reaming is not required
- good chip removal
- powerful drilling
▶ **Plain Shank** : DIN6535-HA



four facet

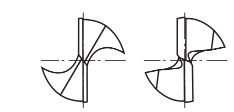
DJ544 SERIES

HSS-E, HPD-SUS DRILLS

JOBBER

▶ **Application** : Designed for drilling in stainless steels, mild steels, aluminum, aluminum alloy, aluminum die cast, copper, copper alloy, etc.
▶ **Advantage** : High helix-sharp cutting edges to avoid built-up and to be suitable for high performance drilling
Wide flute and stub length-increasing chip removal and reducing vibration and deflection.
High vanadium HSS-EX material with superior TiN coating - higher speed and feed, longer service life
High quality-good surface finishes, high productivity.



up to 13mm over 13mm

YG GOLD-P DRILLS

DLGP506 SERIES

HSSCo5, STRAIGHT SHANK PARABOLIC FLUTE, GOLD-P COATED

JOBBER

- **Flute Geometry** : Right hand, 38° helix, Parabolic flutes
- **Point Angle** : 130˚, Split point giving higher chip removal.
- **Surface treatment** : Bright body, TiN coating on working area.
- **Application** : Drilling deep holes in non alloy steels, alloy steels, grey cast iron, malleable cast iron, Special aluminum or magnesium alloys.

YG GOLD-P DRILLS
DLGP506 SERIES
HSSCo5, STRAIGHT SHANK PARABOLIC FLUTE, GOLD-P COATED
JOBBER
Flute Geometry : Right hand, 38° helix, Parabolic flutes
Point Angle : 130˚, Split point giving higher chip removal.
Surface treatment : Bright body, TiN coating on working area.
Application : Drilling deep holes in non alloy steels, alloy steels, grey cast iron, malleable cast iron, Special aluminum or magnesium alloys.

STRAIGHT SHANK DRILLS

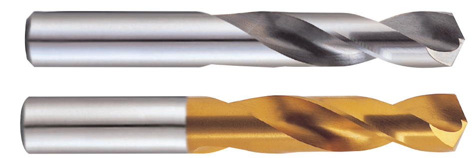
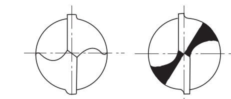
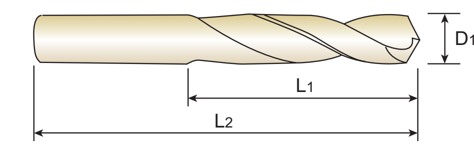
UN-COATED **D2146 SERIES**
TiN-COATED **D4146 SERIES**

HSSCo8, STRAIGHT SHANK SCREW MACHINE

▶ **Flute Geometry** : Right hand spiral, wider flutes
▶ **Point Angle** : 135˚
under 1/16 : Normal point
1/16 & over : Split point
▶ **Application** : Drilling in steel, cast steel alloyed and Non-alloyed, grey cast iron, graphite, malleable cast iron







ANSI | HSS Co8 | N 20~30° | ANSI | 135° | p.A242

YG AIRCRAFT DRILLS

D1631 SERIES
D1634 SERIES

HSS, AIRCRAFT EXTENSION DRILL 135° SPLIT POINT STEAM OXIDE

- **Flute Geometry** : Right hand spiral, 30° helix
- **Point Angle** : 135° : Split point
- **Application** : Improved chip removal in most materials, especially in deep drilling applications.

NC SPOTTING DRILLS

D2N90 SERIES

HSSCo8, NC SPOTTING DRILLS

▶**Application** : For more precise centering work on NC/CNC machine. A larger diameter in respect to the subsequent drilling tool permit to obtain the centering and chamfering simultaneously.

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT

SPADE DRILL INSERTS - SUPER COBALT (T15)

- Increase wear resistance over M4
- For use in medium carbon steel to high temperature alloys
- Performs best in rigid setups

POINT ANGLE - 132 degree (Series 5-8 : 144 degree)

YG SPADE DRILLS

SERIES 3, 4

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT
SPADE DRILL INSERTS - SUPER COBALT (T15)

- ▶ Increase wear resistance over M4
- ▶ For use in medium carbon steel to high temperature alloys
- ▶ Performs best in rigid setups

POINT ANGLE - 132 degree
(Series 5-8 : 144 degree)

YG SPADE DRILLS

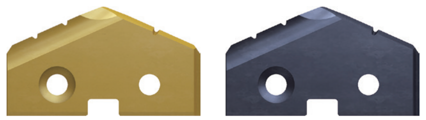
SERIES 0

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT
CARBIDE BLADE INSERTS C2 (K20), C5 (P40), C3 (K10)

- ▶ High performance on Gray cast iron over 220 Brinell, malleable cast iron with short chips, silicon aluminum and copper alloys. (C3)
- ▶ For general use in carbon steels and alloys steels. (C5)
- ▶ For use in Gray cast iron, nonferrous metals,copper, brass and aluminum. (C2)

POINT ANGLE : 132 degree



* 2pcs per package

SPADE DRILLS

SERIES 3

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT

CARBIDE BLADE INSERTS C2 (K20), C5 (P40), C3 (K10)

- High performance on Gray cast iron over 220 Brinell, malleable cast iron with short chips, silicon aluminum and copper alloys. (C3)
- For general use in carbon steels and alloys steels. (C5)
- For use in Gray cast iron, nonferrous metals,copper, brass and aluminum. (C2)

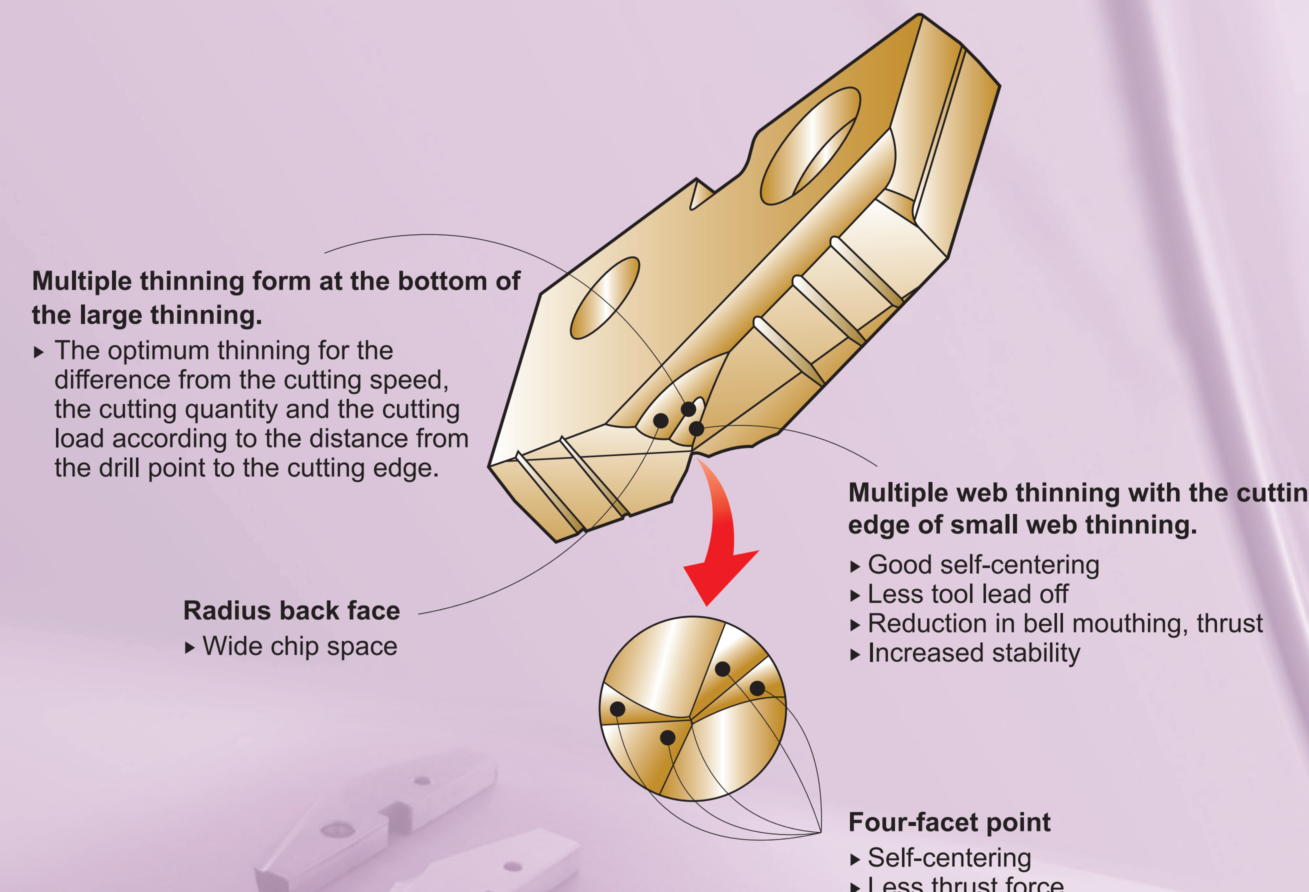
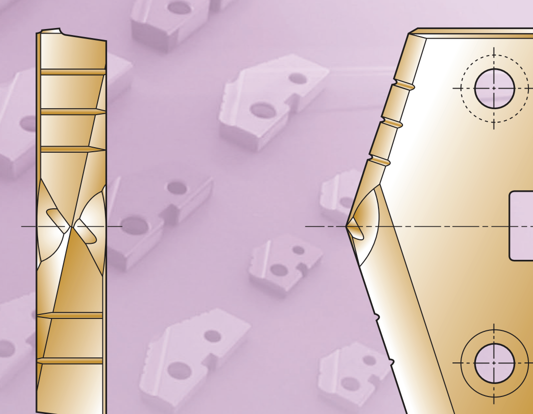
Special features of SM-Point Spade Drill

This "Hybrid Point" combines the strength of the standard point with additional "Web Thinning".

This point increases stability, reduces thrust, improves centering and allows increased speeds and feeds.





YG SPADE DRILLS

SERIES Y, Z, 0, 1

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT
SM-POINT SPADE DRILL INSERTS - SUPER COBALT (T15)

- Improved stability and hole straightness by newly developed thinning design.
- Less thrust force and excellent self-centering.
- Any non-standard size available.

POINT ANGLE - 132 degree
(Series 5-8 : 144 degree)

YG SPADE DRILLS

SERIES 4, 5

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT
SM-POINT SPADE DRILL INSERTS - SUPER COBALT (T15)

- ▶ Improved stability and hole straightness by newly developed thinning design.
- ▶ Less thrust force and excellent self-centering.
- ▶ Any non-standard size available.

POINT ANGLE - 132 degree
(Series 5-8 : 144 degree)

YG SPADE DRILLS

SERIES 2, 3

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT
SM-POINT SPADE DRILL INSERTS - CARBIDE C5 (P40)

- Improved stability and hole straightness by newly developed chip thinning design.
- Less thrust force and excellent self-centering.
- Any non-standard size available.
- Increased speeds & feeds

POINT ANGLE : 132 degree

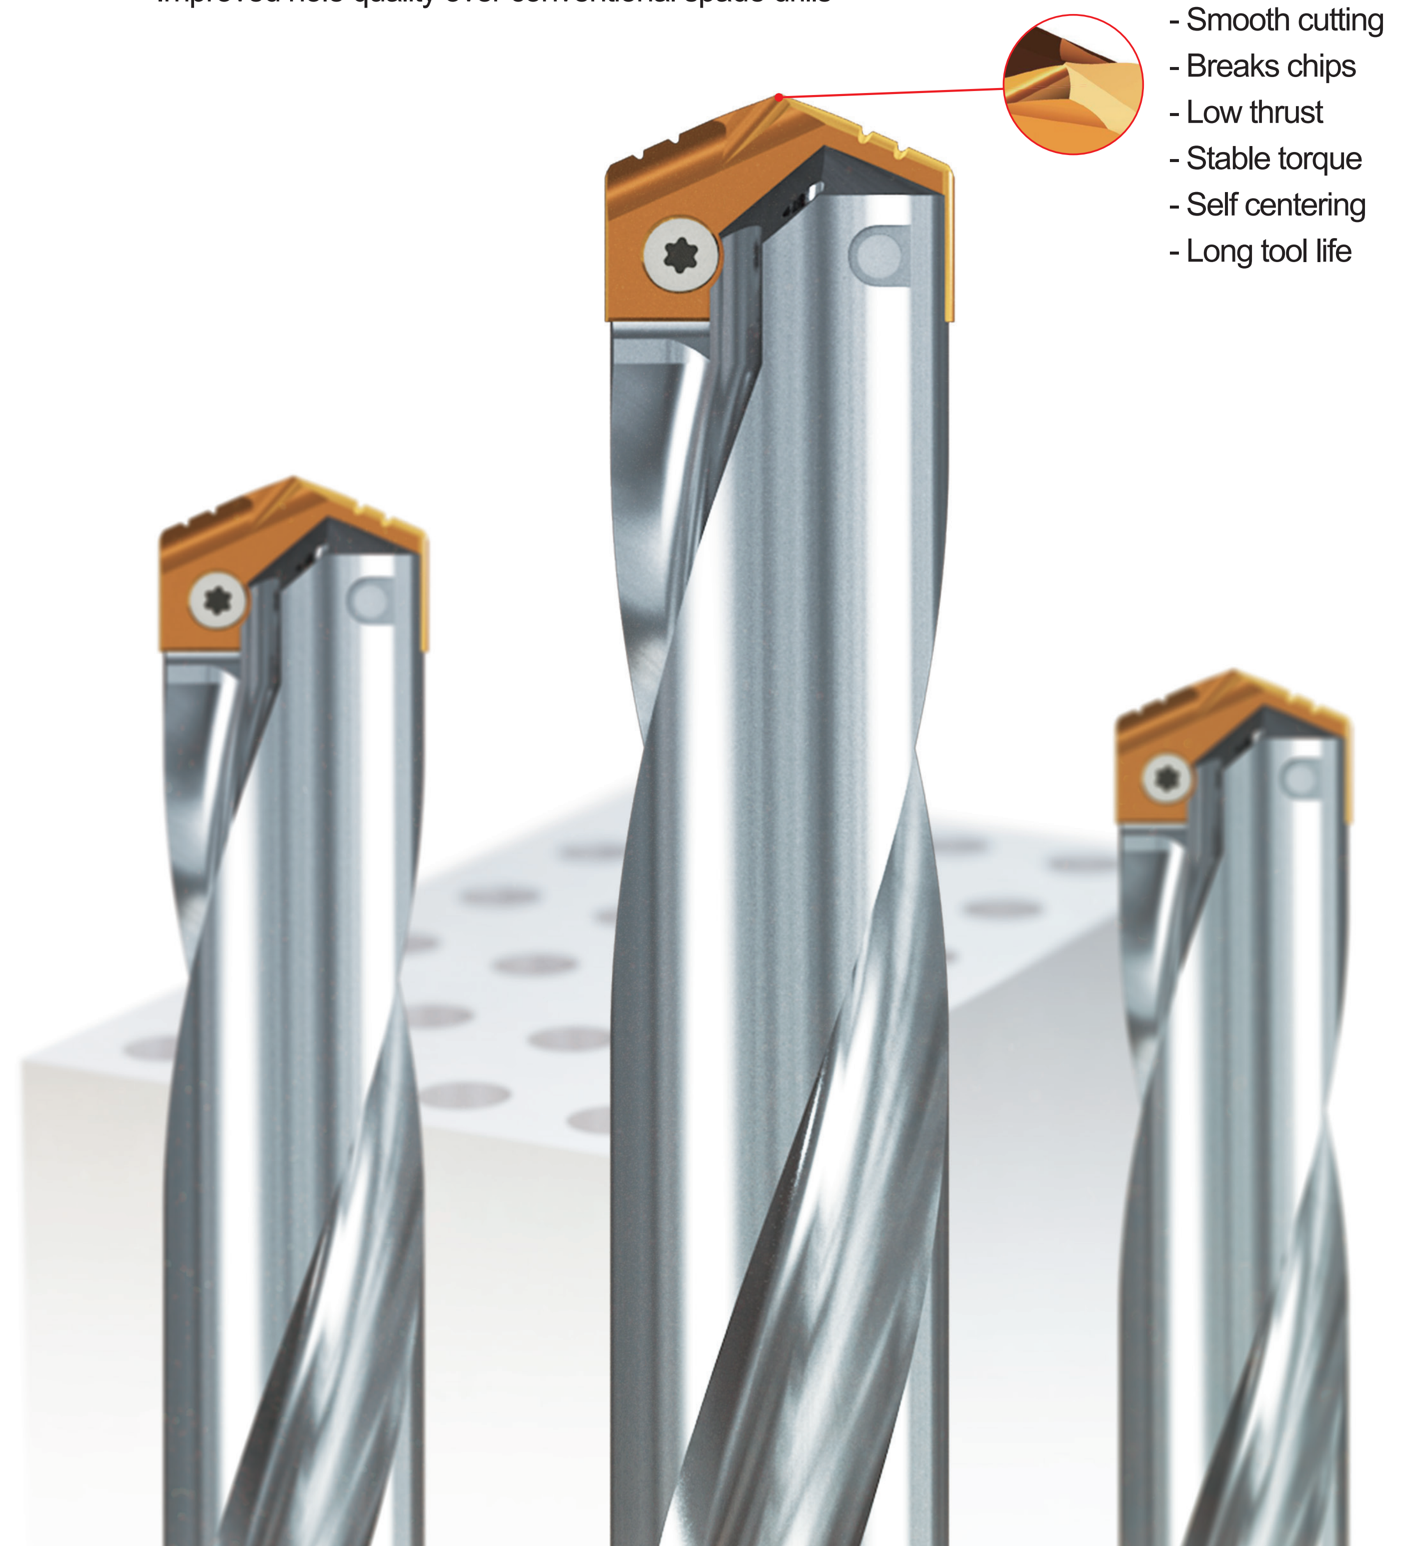
SPADE DRILLS SV-POINT

Improved stability and hole straightness

H-Coating (Upgraded AlCrN-Based Multi-Layer coating)

- Higher wear resistance and reduced material adhesion
- Higher cutting speeds and feeds
- Improved hole quality over conventional spade drills



YG SPADE DRILLS

SERIES Y, Z

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT
SV-POINT SPADE DRILL INSERTS - SUPER COBALT (T15)

- Sinusoidal thinning edge for smooth cutting
- Positive rake angle
- Less thrust force and heat generation

SERIES 5

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT

SV-POINT SPADE DRILL INSERTS - SUPER COBALT (T15)

- Sinusoidal thinning edge for smooth cutting
- Positive rake angle
- Less thrust force and heat generation

POINT ANGLE : 132 degree
(Series 5-8 : 144 degree)

The recommendations for speed, feeds and other parameters presented in this chart are nominal recommendations and should be considered only as good starting points. Speed and feed reduction (20% reduction in speed and 10% reduction in feed) are recommended.

YG SPADE DRILLS

RECOMMENDED CUTTING CONDITIONS

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT

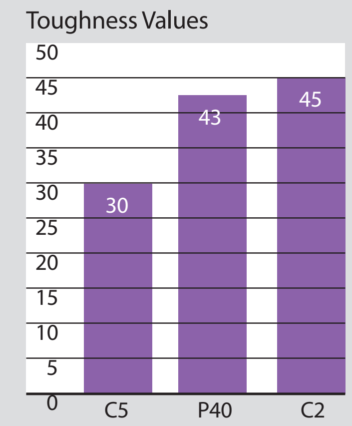
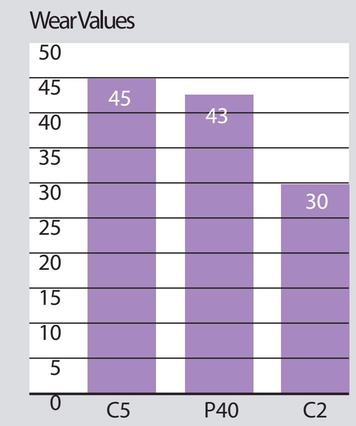
SPADE BLADE INSERTS SELECTION & APPLICATIONS CARBIDE





If C5 chips try C2 at 10% – 20% lower S.F.M. than C5 rating

Grade	Geometry and Application	Stocked Coatings
P40 & C5	Steel Cutting	Super TiN TiAlN
C3	Cast Iron	Super TiN TiAlN
P40 & C2	Ductile Iron Stainless Steel Aluminum Exotic Alloys	Super TiN TiAlNE

Note : Carbide has a lower transverse rupture strength than HSS and is prone to chipping and breakage.

Recutting of chips or lack of rigidity can cause breakage.

Check Coolant Recommendations Chart on Page 461 for flow rates.

RPM = revolution per minute (rev/min)
SFM = surface feet per minute (ft/min)
DIA = diameter of drill (inch)
IPR = feed rate (in/rev)
IPM = inch per minute penetration rate

* Formulas :

SFM = (RPM)·(.262)·(DIA.)

IPM = (RPM)·(IPR)

$$RPM = \frac{(SFM)\cdot(3.82)}{(DIA.)}$$

The recommendations for speeds, feeds and other parameters presented in this chart are nominal recommendations and should be considered only as good starting points. Speed and feed reductions (20% reduction in speed and 10% reduction in feed) are recommended.

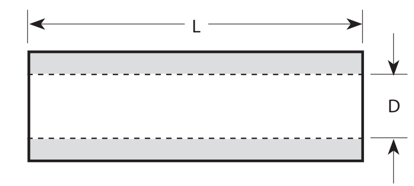
YG SPADE DRILLS

RECOMMENDED CUTTING CONDITIONS

2-FLUTE EXCHANGEABLE DRILLS WITH INTERNAL COOLANT

SPADE BLADE INSERTS HORSEPOWER CONSUMPTION RATE

Metal Removal Rates (MRR)
Example : 1.50 Dia. Drill @ 6.412 I.P.M.



Volume of Cylinder Method : D^2x.785xL
D = Hole Diameter
L = Length in I.P.M.
.785 is Constant

Material Drilled 4140 250 BHN :
Cutting Data : 180 S.F.M. (458 R.P.M.) x .014 Feed per Rev.

458 R.P.M. x .014 = 6.412 I.P.M. (L)

D^2 $(1.5)^2$ x .785 x L (6.412) = 11.3 C.U.In./ Min (MRR)

MRR of 11.3 x 1.4 Energy Value = 15.8HP.

metal removal rates (mrR)

- Cubic inches of metal removal per unit of horsepower.
- Unit horsepower (HP_u) is the amount of power to remove a volume of metal in a period of time.
  - HP_u = power to cut 1 cubic inch per minute – found in tables

Average Unit Horsepower Values of Energy Per Unit Volume

Material	BHN	HP_u (HP/(in^3/min.))
Carbon Steels	150-200	1.0
	200-250	1.4
	250-350	1.6

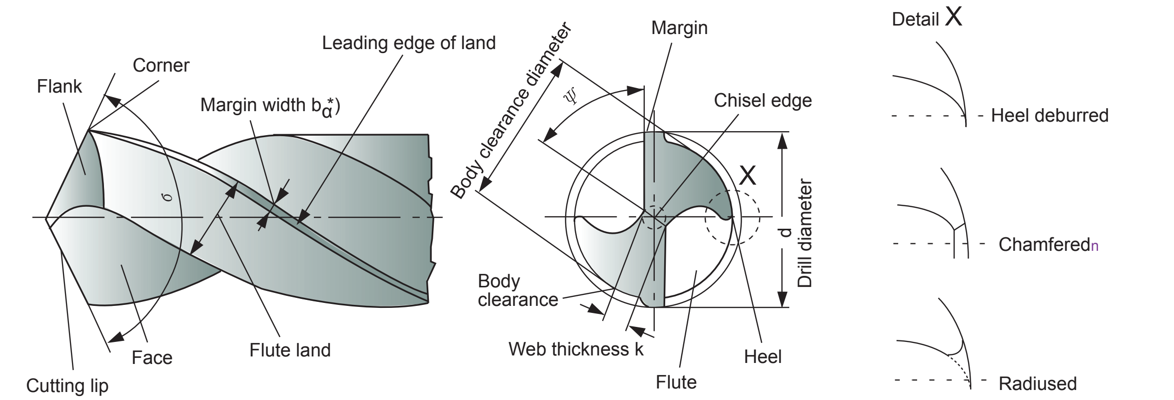
YG TECHNICAL DATA

4 Cutting portion



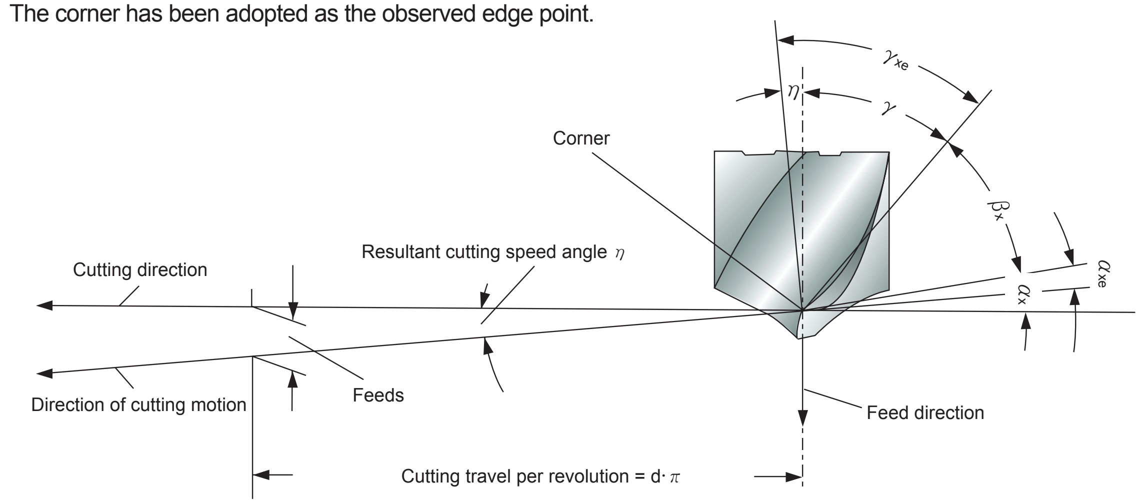
σ = Point angle (sigma)

Ψ = Chisel edge angle (psi)

* In the context of cutting technology, land width b_{α} is the body clearance land width which is to be by $b_{f\alpha n}$, see DIN 6581.

5 Angle at the cutting edges

The corner has been adopted as the observed edge point.



α_x = Side clearance angle (alpha)

α_{xe} = Effective side clearance angle

β_x = Side wedge angle (beta)

γ_x = Front rake angle (gamma)

γ_{xe} = Working front rake angle

η = Resultant cutting speed angle (eta)

Clearance angle α, wedge angle β and rake angle γ are measured in the tool orthogonal plane. For details, see DIN 6581, definitions of metal-cutting technology; geometry at the tool edge.

6 Web thickness k

Test values : The web thickness according to Fig. 1 shall not be less than the minimum value k_{min} indicated in Fig. 2.
Test point : At the point of the drill.
Testing equipment : Slide gauge with measuring points.

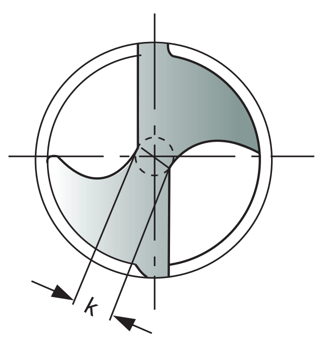

Figure 1. Web thickness k

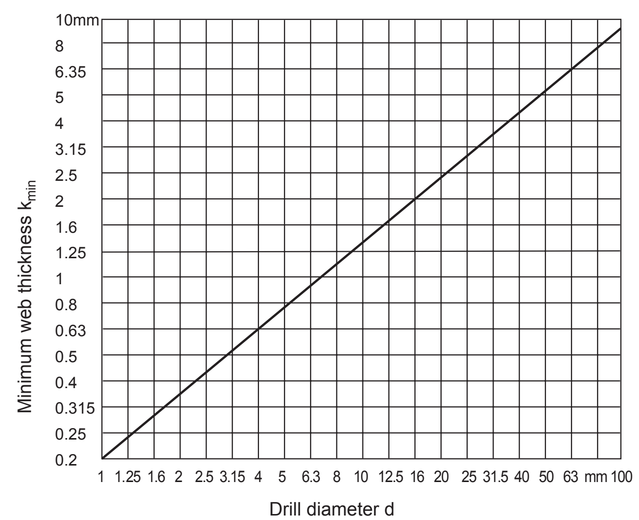

Figure 2. Web thickness k_{min}

7 Margin width bα

Test values : The land width as in Fig. 3 shall lie within the limited values indicated in Fig. 4.
Test point : 5mm behind the corner
Testing equipment : Slide gauge

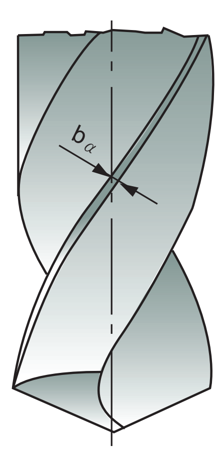

Figure 3. Margin width b_α

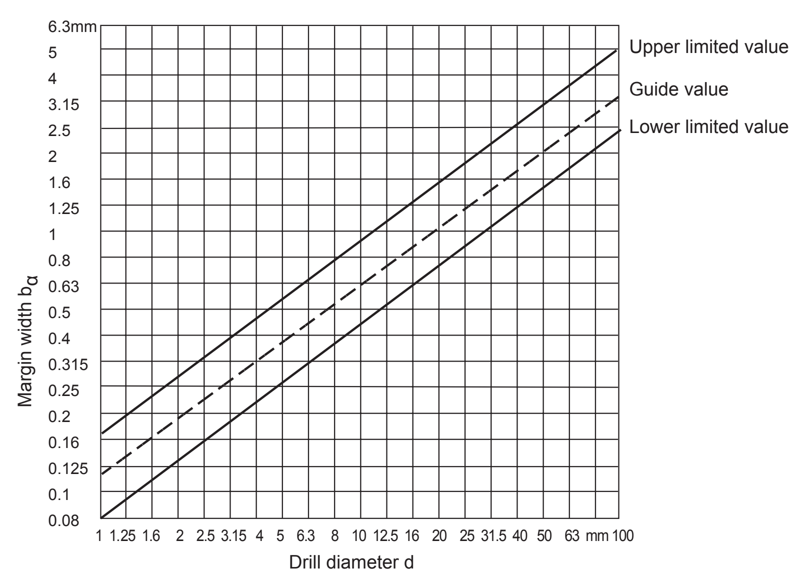

Figure 4. Margin width b_α

YG TECHNICAL DATA

8 Angle on Twist Drills

(1) Side rake angle γf (Helix angle)

Recommended test value : Recommended ranges depending on the tool types N,H and W according to DIN 1836 and the diameter of the drill included in Fig. 5.

Test point : At the corner, see Fig. 6.

Testing equipment : According to VDI Guideline 3331 Part 1, Section Margin width b_α

Note : The side rake angle γ_f is measured in place of the orthogonal rake angle γ_o found in the wedge measuring plane (see DIN 6581), as this changes along the cutting edge (becoming smaller towards the point of the drill).

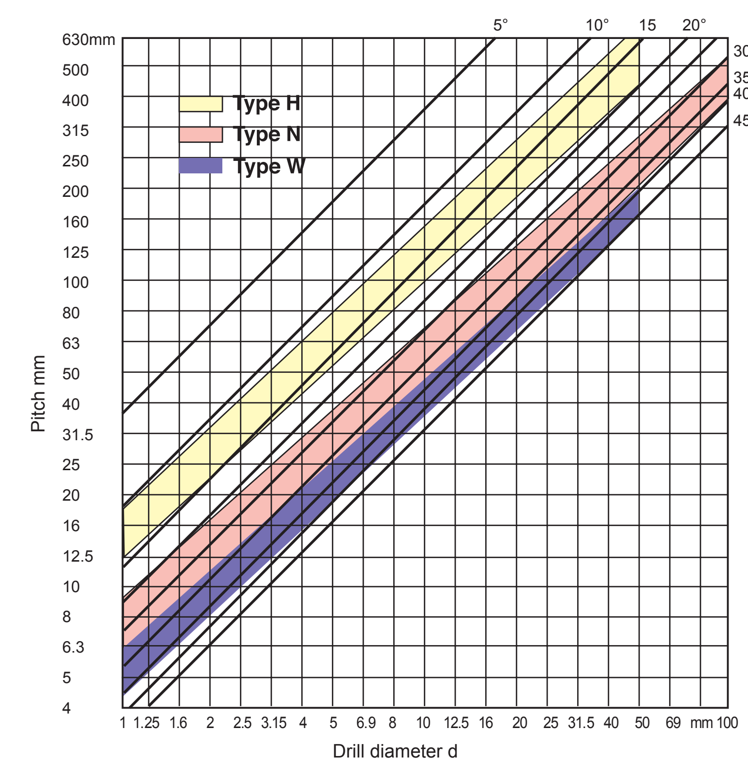

Figure 6. Side rake angle γ_f

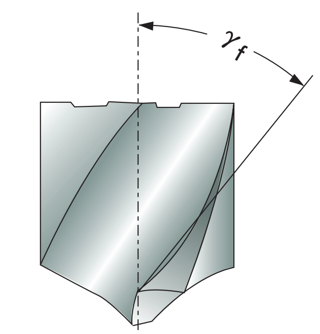

Figure 5. Side rake angle γ_f

(2) Point angle σ

Test value : Usual executin for tool types N and H : σ =118°,
for tool type W : σ =130°

Test point : At the cutting, see Fig. 7.

Testing equipment : According to VDI Guideline 3331 Part 1, Section Margin width b_α

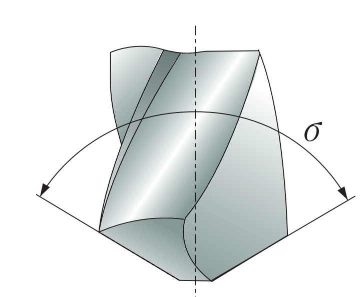

Figure 7. Point angle σ

9 Resharpening Twist Drills

(1) Drills are worn off irregularly. It should be sharpened prior to developing into excessive wear.

(2) Resharpening

① Grind the correct point angle to suit your application. (figure 8)
② Check that both cutting lips have the same angle. On a 130° point, each lip should be 65° toward the axis. The point must be on center, i.e., the chisel edge must produce cutting lips of equal length. (figure 8)
③ Grind Primary relief and Secondary clearance. (figure 9)
④ Grind web thinning. (figure 10)

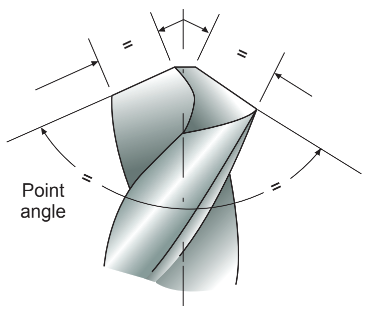

Figure 8

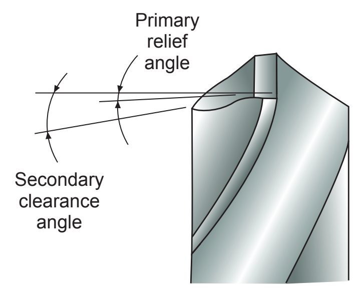

Figure 9

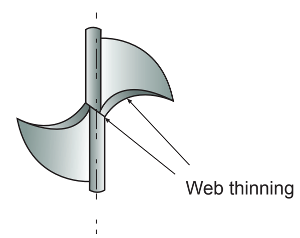

Figure 10

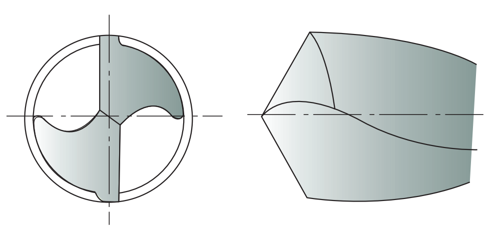
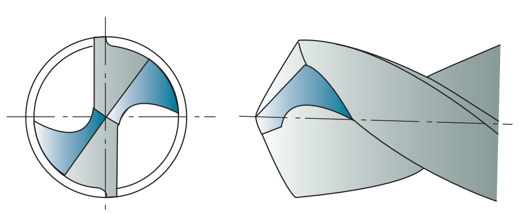
10 Web thinning

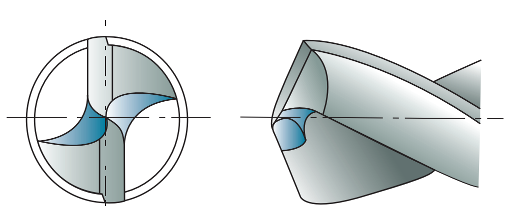
(1) Without thinning
Suitable for drill of general purpose.
Thanks to thin web thickness, web thinning is not needed.
This without web thinning type is applied to design of drills for mild steels, alloy steels, cast iron, stainless steels, titanium, inconel, etc. and conventional cutting conditons.



(2) Type C thinning (DIN1412 FORM C, SPLIT POINT)
Because Split point enables good centering when drilling and breaks the chips, chip removals are easy.
Suitable for drill design in high hardened tough materials, i.e, heat treated steels, titanium alloys, stainless steels, incoroy inconel, nimonic, etc.

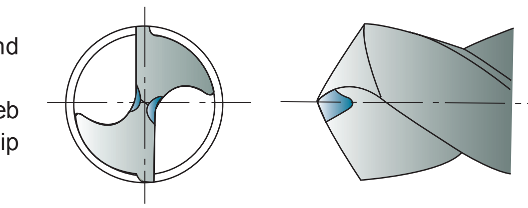


(3) Type R thinning (HELICAL THINNING)
Helical thinning ensures to frequent chip breaking and removal. The different direction force of cutting edges and helical thinning parts enable that chips curl, break and remove through the flutes. In addition, helical thinning makes the chip room up to center, remove the chisel and enables good centering

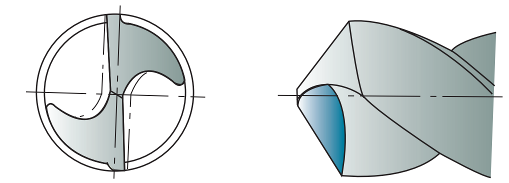


YG TECHNICAL DATA

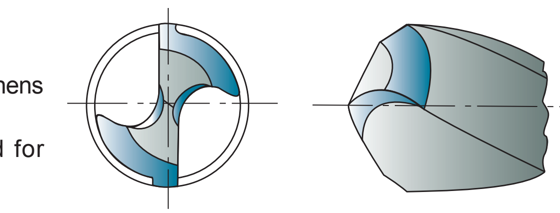
(4) Type A thinning (DIN1412 FORM A)
A type thinnings makes thin chisel, good chip removal and favorable centering.
This type is the easiest type to grind the thinning. In narrow web and wide fluted drills, keeping of the rigidity and smooth chip removal are possible.



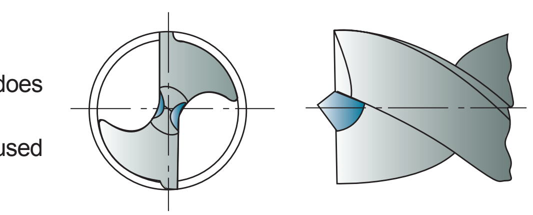
(5) Type B thinning (DIN1412 FORM B)
In case of work materials with low cutting resistance and good chip removal, i.e., cast iron, aluminum, plastic etc., B type thinning is suitable.
Especially when drills for high hardened steels are designed, this type is applied to decrease rake angle and avoid chipping of cutting lips.



(6) Type D thinning (DIN1412 FORM D)
Grey cast iron thinning; bevelling of external edges strengthens the cutting edge.
Used for medium to high grey cast iron hardness and for abrasives.



(7) Type E thinning (DIN1412 FORM E)
Center drill bit thinning; ensures optimal center drilling and does not leave burs in through holes.
As the bit and cutting edges are delicate, this bit should be used for drilling thin sheet metal.



11 Surface Finishes for high speed steels Twist Drills

(1) Bright Finish
Drills with a bright finish are without surface treatment and ground condition.
Especially bright finished drills are used in machining of non ferrous materials.

(2) Coloring (Gold color)
The coloring is a thin oxide layer formed on the tool surfaces.
This is often applied to cobalt high speed steels twist drills.

(3) Steam Tempered (black oxide finish)
This is a black oxide layer 1-2㎛ formed on the tool surfaces.
Steam Tempered treated drill is the result of a steam tempering operation. Because the oxide layer retains some coolant on the tool surface, and aids chip flow, helps to dissipate heat, steam homo treated drills are recommended for ferrous applications.

12 Coating

The use of coated cutting tools reduce production costs.
For example

- Avoidance of machine downtime due to premature tool wear.
- Higher cutting capabilities to reduce actual machining times.
- Reproducible tool life.
- Improvement of component surface quality.

(1) TiN (Titanium Nitride) coating

Titanium Nitride gives the tool a higher performance in comparison to traditional non-coated drills.
TiN coating, with good all-around properties, is recommended for the general application, i.e., attack by abrasive, adhesive and chemical wear in equal proportions.

(2) TiCN (Titanium Carbon Nitride) coating

TiCN coating should be employed when severe thermodynamic stress is expected, for example when drilling in high hardened steels or in mild steels with high speed and feed.

(3) TiAlN (Titanium Alumium Nitride) coating

The addition of Aluminum to the Titanium Nitride produces an increase in hardness and an exceptional increase in resistance to oxidation at high temperature.
TiAlN coating is applied to drilling with severe thermal stress on cutting edges when continuous non-step feed, dry cutting or high speed cutting.

(4) Properties of coating

Properties	TiN	TiCN	TiAlN
Coating color	gold - yellow	blue - grey	violet - grey
Hardness (Hv 0.05)	2300	3000	3000
Coating thickness (㎛)	1~ 4	1~ 4	1~ 5

15 Trouble Shooting in Drilling

Occurrence of trouble	Cause of trouble	Countermeasures
Drill will not enter work	1. Drill is dull. 2. Lip relief too small. 3. Too thick a web.	1. Grind lip relief sufficiently. 2. Grind web thinning. 3. Choose a drill with narrow web.
Margin chipping	1.Oversized jig bushing.	1. Choose the suitable jig bushing for drill diameter
Cutting lip breaks	1. Lip relief too much. 2. Feed too heavy.	1. Grind lip relief sufficiently. 2. Decrease feed rate.
Tang breaks Bruch der	1. Imperfect fit between taper shank and socket. 2. Burred or Badly worn sockets.	1. Clean the dirt or chips in sockets. 2. Change the worn sockets to new ones.
Drill breaks in brass	1. Unsuitable drill 2. Flutes clogged with chips	1. Choose the suitable drill for work material.
Chipping of drill center	1. Lip relief too much. 2. Feed too heavy.	1. Grind lip relief sufficiently. 2. Decrease feed rate.
Hole oversize	1. Unequal angle or length of cutting edges. 2. Loosen spindle.	1. Resharpening point, choose correct drills. 2. Tighten spindle sufficiently.
Outer corners broken down	1. Cutting speed too high. 2. Hard spots in work material. 3. Flutes clogged with chips. 4. Too wear of drills.	1. Grind point to suit work material. 2. Decrease the feed rates. 3. Resharpening early beforce too wear.
Large chip of one flute and small chip of other flute	1. Improperly ground point. 2. Only one lip doing all the cutting	1. Properly grind point. 2. Grind point with same point angle and length of lip 3. Grind with small lip height.
Hole rough	1. Improperly ground point. 2. Unenough coolant supply 3. Too much feed. 4. Fixture not rigid.	1. Properly grind point. 2. Supply coolant enough. 3. Decrease the feed rate. 4. Tighten the fixture or replace.

16 Characteristic of DREAM DRILLS

- YG-1's Dream Drill Series are suitable for high speed and accurate drilling operations by special design and high quality.
- Good performance for Steels, Cast Irons, Tool steels, Alloy steels and Stainless steels.
- Rapid chip evacuation and excellent chip breaking can be achieved by special designed cutting edges on point and chip breakers on leading edges.
- High accuracy and stability.
- Longer tool life with TiAlN coating.
- Self-centering

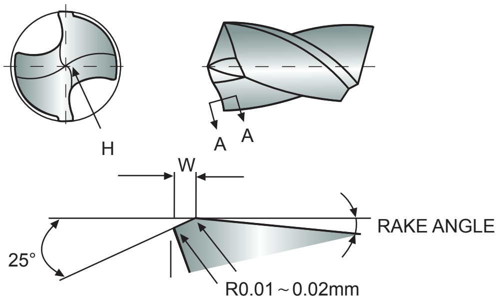
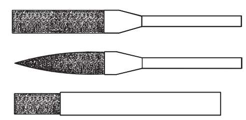
17 Honing Guide of DREAM DRILLS

■ **Dimension of Honing**



▶ Section A-A

■ **Scraper**



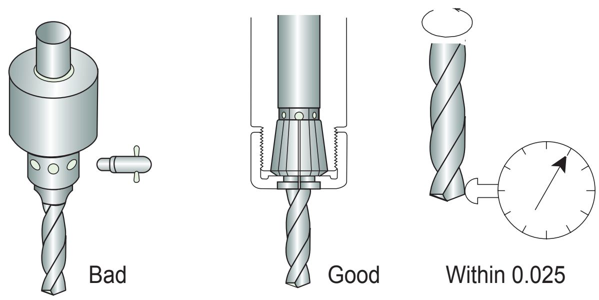
for Roughing (#140)

for Finishing (#230～#400)

Work Material	Alloy Steels	Mild Steels	Cast Iron
W(mm)	0.15～0.2	0.1～0.15	0.03

▶The dimension W of stocked products is 0.1～0.15.

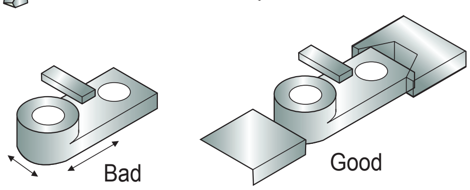
18 Use of DREAM DRILLS

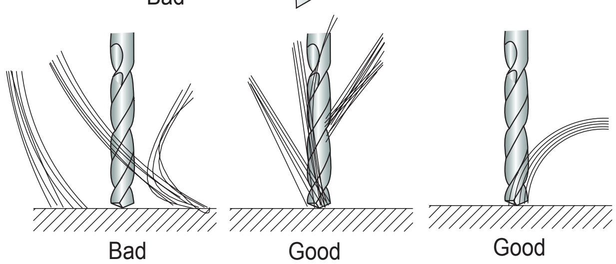


▶ Chucking with spring collet correctly.

▶ Radial run out at cutting lip must not exceed 0.025 mm.

▶ Tighten clamp of work piece.

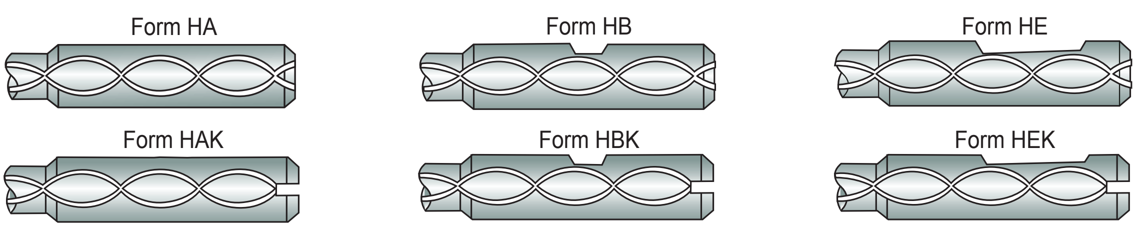




▶ Supply coolant enough to the entrance of hole.

▶ When using Dream Drills with Coolant holes, Supply high pressure coolant.

19 Shank Type DREAM DRILLS with Coolant Holes



▶ Shank Type of stocked products is Form HA.

▶ If you need other Shank Type, we can supply them.

SPIRAL FLUTE for High Speed Tapping

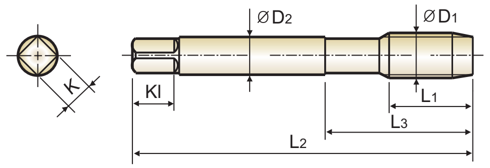
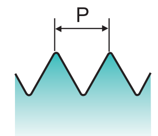
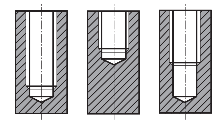
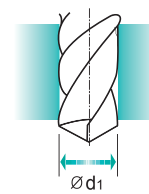
- ▶2-3 times faster when tapping the GS material group
- ▶Precision Threads
- ▶Unsurpassed chip handling





Hole type 2.5XD





Refer to B323~B336 for tap drill sizes

Material groups: GS | HSS PM | M/MF | D | 60° | R45° | 2P~3P | TiN | P.B66

Unit : Metric

▶ Feature :
- To compensate for synchronization errors to extend tap life and to improve thread quality
- To compensate for lead tolerances of taps
- For machines with synchronous tapping cycles

▶ BT(JIS B6339/MAS-403), HSK(DIN 69893/ISO 12164-1) AND K-STRAIGHT TAPER PRODUCTS ARE AVAILABLE

Being the best through innovation
