The above recommended taps normally produce the Class of Thread indicated in average materials when used with reasonable care. However, if the tap specified does not give a satisfactory gage fit in the work, a choice of some other limit tap will be necessary.

* Distance small end of tap projects through L1 Taper Thread Ring Gage.
** Recommended size given permit direct tapping without reaming the hole, but only give a full thread for approx. the L1 length.

20 TROUBLE SHOOTING GUIDE

Specific Problem	Cause	Solution
Dimensional Accuracy		
Oversize Pitch Diameter	Tap	1. Use Proper Limits Of Taps 2. Use Longer Chamfered Taps
	Chip Packing	1. Use Spiral Point Or Spiral Fluted Taps 2. Reduce Number Of Flutes To Provied Extra Chip Room 3. Use Larger Hole Size 4. If Tapping A Hole, Allow Deeper Hole Where Applicable Or Shorten The Thread Length Of The Parts 5. Use Proper Lubricant
	Galling	1. Apply Proper Surface Treatment Such As Hardslick Or Chrome 2. Use Proper Cutting Lubricant 3. Reduce Tapping Speed 4. Use Proper Cutting Angle In Accordance With Material Being Tapped 5. Use Large Hole Size
	Operating Conditions	1. Apply Proper Tapping Speed 2. Correct Alignment Of Tap And Drill Hole 3. Free Cutting Either Tap Or Workpiece 4. Use Proper Tapping Speed To Avoid Torn Or Rough Threads 5. Use Lead Screw Tapper 6. Use Proper Tapping Machine With Suitable Power 7. Avoid Misalignment Of The Tap And Drill Hole From Loose Spindle Or Worn Holder
	Tool Condition	1. Obtain Proper Indexing Angle For The Flutes At The Cutting Edge 2. Grind Proper Cutting Angle And Chamfer Angle 3. Avoid Too Narrow A Land Width 4. Remove Burrs From Regrinding
Oversize Internal Diameter	Hole Size	1. Use Minimum Hole Size 2. Avoid Tapered Hole 3. Use Proper Chamfered Taps
	Galling	1. Galling Solutions 1 Through 4 Above Can Be Applied To This Specific Problem
Undersize Pitch Diameter	Incorrect Tap	1. Use Oversize Taps 2. Apply Proper Chamfer Angle 3. Increase Cutting Angle
	Damaged Thread	1. Use Proper Reversing Speed To Avoid Damaging Tapped Thread On The Way Out Of The Hole
	Left-over Chips	1. Increase Cutting Performance To Avoid Any Left Over Chips In The Hole 2. Remove Left Over Chips From The Hole For Gage Checking
Undersize Internal Diameter	Hole Size	1. USE MAXIMUM DRILL SIZE

TECHNICAL DATA

Specific Problem	Cause	Solution
Tool Life		
Breakage	Incorrect Tap Selection	1. Avoid chip packing in the flutes or the bottom of the hole. Use spiral pointed or spiral fluted taps or fluteless taps. 2. Apply correct surface treatment such as Hardslick or bright
	Excessive Tapping Torque	1. Use larger drill size 2. Try to shorten thread length 3. Increase cutting angle 4. Apply a tap with more thread relief and reduced land width 5. Apply correct surface treatment such as Hardslick
	Operating Conditions	1. Reduce tapping speed 2. Avoid misalignment between tap and the hole and tapered hole 3. Use floating type of tapping holder 4. Use tapping holder with torque adjustment 5. Avoid hitting bottom of the hole with tap
	Tool Condition	1. Do not grind the bottom of the flute 2. Avoid too narrow a land width 3. Remove all worn sections when regrindig the flutes 4. Regrind tool more frequently
Chipping	Incorrect Tap Selection	1. Reduce cutting angle 2. Use a different kind of high-speed steel tap 3. Reduce hardness of the tap 4. Increase chamfer length 5. Avoid chip packing in the flutes or in the bottom of the hole by using spiral fluted or spiral pointed taps
	Wear	1. Reduce tapping speed 2. Avoid misalignment between tap and hole 3. Avoid sudden return of reverse in blind hole tapping 4. Avoid galling 5. Use larger hole size
Wearx	Incorrect Tap Selection	1. Apply specially designed tap for tapping heat treated materal 2. Change to a type of high-speed steel tap that contains vanadium 3. Apply special surface treatment such as TiCN or Hardslick 4. Increase chamfer length
	Operating Conditions	1. Reduce tapping speed 2. Apply proper cutting lubricants 3. Avoid work hardened hole 4. Use larger hole size
	Tool Condition	1. Grind proper cutting angle 2. Avoid hardness reduction from grinding process
Torn or Rough Thread	Chamfer Too Short	1. Increase chamfer length
	Wrong Cutting Angle	1. Apply proper cutting angle

TECHNICAL DATA

TECHNICAL DATA

Specific Problem	Cause	Solution
Surface Finish		
Torn or Rough Thread	**Galling**	1. Use thread relieved taps 2. Reduce land width 3. Apply surface treatment such as Hardslick or chrome 4. Use proper cutting lubricant 5. Reduce tapping speed 6. Use larger hole size 7. Obtain proper alignment between tap and work
	Chip Packing	1. Use spiral pointed or spiral fluted taps 2. Use larger drill size
Chattering on Tapped Thread	**Tool Free Cutting**	1. Reduce cutting angle 2. Reduce amount of thread relief
	Tool Condition	1. Do not grind the bottom of the flute 2. Avoid too narrow a land width

PLAIN SHANK **ESB94 SERIES**

CBN, 2 FLUTE BALL NOSE

- Higher accuracy, better finishes, longer tool life.
- Special geometry improves tool rigidity at high Speed.
- Tighter radius tolerance (±0.005mm) assures higher accuracy.

i-Xmill BALL HOLDERS - CARBIDE

- Equal tool rigidity like solid carbide end mill that makes the stable and high finishing machining with less vibration.
- The high finishing machining for the deeper part of mold.
- The tool's life of carbide ball holders is longer than steel holder.
- Shrink Fit Holding system can be applied.
- Upon request, the worn holder is able to be regenerated.

i-Xmill CORNER RADIUS INSERTS

- The optimum geometry of the tool to achieve the better reliability and less vibration and cutting load.
- Interchangeability with i-Xmill ball holder, but the precise cutting is possible with i-Xmill corner radius holder due to higher stability and strength of tool.
- The various and wide cutting range makes it possible to machine over the roughing and finishing.
- Special coating makes high hardness with high thermal stability against oxidation.
- Three Types of Inserts are available
  - For General Purpose (~HRc50)
  - For Hardened Material (HRc40~HRc65)
  - For Graphite

i-Xmill BALL HOLDERS - CARBIDE

- Equal tool rigidity like solid carbide end mill that makes the stable and high finishing machining with less vibration.
- The high finishing machining for the deeper part of mold.
- The tool's life of carbide ball holders is longer than steel holder.
- Shrink Fit Holding system can be applied.
- Upon request, the worn holder is able to be regenerated.

i-Xmill CORNER RADIUS INSERTS

- The optimum geometry of the tool to achieve the better reliability and less vibration and cutting load.
- Interchangeability with i-Xmill ball holder, but the precise cutting is possible with i-Xmill corner radius holder due to higher stability and strength of tool.
- The various and wide cutting range makes it possible to machine over the roughing and finishing.
- Special coating makes high hardness with high thermal stability against oxidation.
- Three Types of Inserts are available
  - For General Purpose (~HRc50)
  - For Hardened Material (HRc40~HRc65)
  - For Graphite

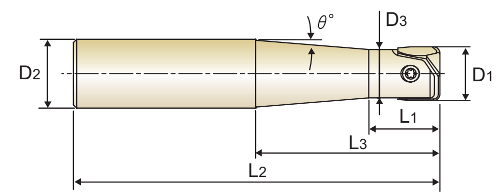
i-Xmill CORNER RADIUS HOLDERS - STEEL

- ▶ Premium alloy steel with excellent strength.
- ▶ Precise shank, Tolerance (h6).
- ▶ Nickel plated, to prevent corrosion and improve lubricity.



Taper neck Type

Unit : mm

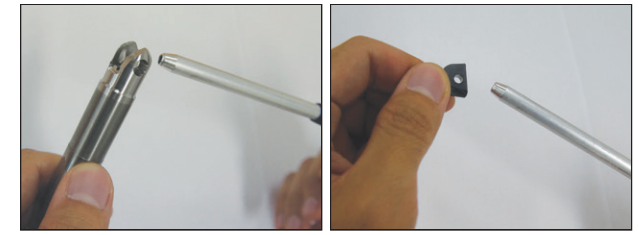
* ● Required to use T-HANDLE (TWH600)

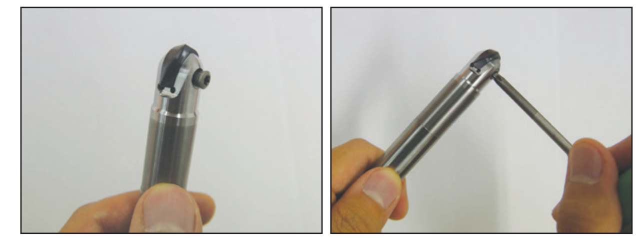
YG i-Xmill END MILLS

RECOMMENDED CUTTING CONDITIONS

ASSEMBLY OF i-Xmill



◀ Make sure to clean the insert and insert seat.



◀ Slide the insert into the slot of the holder.
Tighten the screw using anti-seize compound.

SIZE		CLAMPING TORQUE
ØD		[in • lbs]
Ø5/16	(Ø8)	9.0
Ø3/8	(Ø10)	13.5
Ø1/2	(Ø12~Ø13)	22.5
Ø5/8	(Ø16~Ø17)	31.5
Ø3/4	(Ø20~Ø21)	44.5
Ø1	(Ø25~Ø26)	53.0
Ø1-1/4	(Ø30~Ø32)	58.0

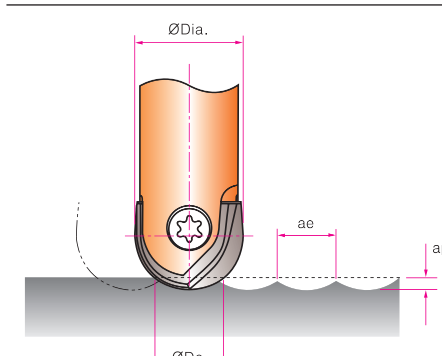
⁎ When the screw is worn out, please change the new screw.
⁎ Please tighten up the screw with recommended torque. (Please refer to the table)
⁎ Don't press down the insert, when the screw is tightened.

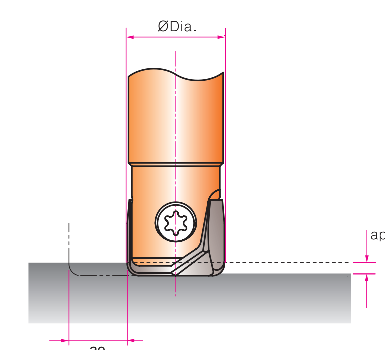
Wrench No.

WRENCH TYPE		PRODUCT NO.	T-HANDLE No.
WING TYPE		TWFT10	–
		TWFT15	–
TORX BIT TYPE		● TWBT20	TWH600 
		● TWBT25	
		● TWBT30	

* ● Required to use T-HANDLE (TWH600)

CUTTING CONDITION
SCHNEIDKONDITIONEN





RPM = revolution per minute (rev/min)
SFM = surface feet per minute (ft/min)
Dia. = diameter of insert (inch)
IPR = feed rate (inch/rev)
IPM = inch per minute penetration rate
De = effective tool diameter (inch)
ap = axial depth of cut (inch)
ae = radial depth of cut (inch)

$$\text{SFM [ft/min]} = \frac{(\text{RPM}) \cdot (\pi) \cdot (\text{Dia.})}{12} \qquad \text{RPM [rev/min]} = \frac{(\text{SFM}) \cdot (12)}{(\pi) \cdot (\text{Dia.})}$$

$$\text{IPM [inch/min]} = (\text{RPM}) \cdot (\text{IPR}) \qquad \text{De [inch]} = 2\sqrt{(\text{ap}) \cdot (\text{Dia. - ap})}$$

▶ When the length of overhang exceeds 4xD, we recommend using the carbide shank holder with 20% lower feed
▶ When using long (long & intermediate type holder) tools, we recommend reducing the feed rate to 70 ~ 85%.

ap : Roughing - Under Ø5/8 : 0.025 x D
From Ø5/8 : 0.05 x D

Finishing - Under Ø5/8 : .004"
From Ø5/8 : .008"

▶ When the length of overhang exceeds 4xD, we recommend using the carbide shank holder with 20% lower feed
▶ When using long (long & intermediate type holder) tools, we recommend reducing the feed rate to 70 ~ 85%.

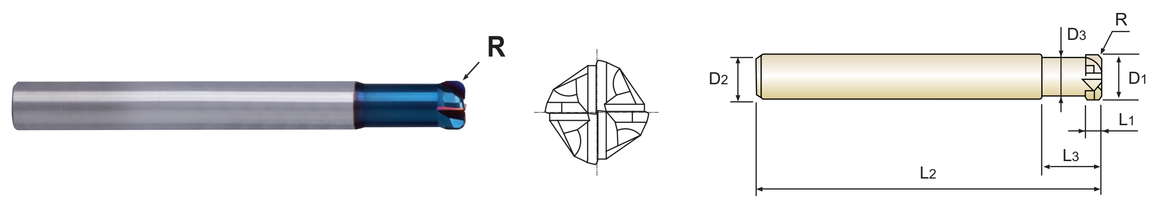
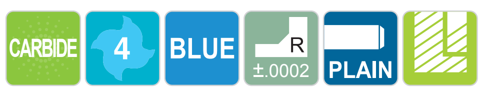
YG X5070 END MILLS

PLAIN SHANK **G826** SERIES

CARBIDE, 4 FLUTE STUB LENGTH CORNER RADIUS HIGH FEED

- ▶ Excellent wear resistance at heavy feed rates on high hardened material.
- ▶ Designed with reduced clearance angles and short flutes for strength.
- ▶ High hardness & heat resistance coating for long life in dry applications.





p.C107-C108

- Designed to machine high hardened materials.
- Suitable for dry cutting, high speed cutting due to newly developed raw-material and new coating.
- Excellent workpiece finish.
- Deep slotting is possible by reduced neck.
- Corner radius for preventing the chipping in high speed machining.
- Higher wear-resistance.

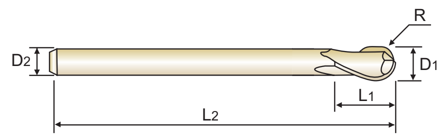
PLAIN SHANK **GMF15** SERIES

CARBIDE, 2 FLUTE BALL NOSE

- ▶ New coating and new tool geometry gives outstanding cutting performance and wear resistance.
- ▶ Unique ball nose geometry with superior cutting edges result in decreased cutting forces.
- ▶ Excellent performance when cutting steels, up to HRc55



CARBIDE | 2 | 30° | R ±.0002 (R≤1/8) | R ±.0004 (R>1/8) | PLAIN | p.C268-C269

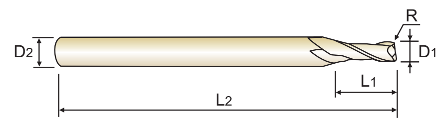
PLAIN SHANK **GMF18** SERIES

CARBIDE, 2 FLUTE CORNER RADIUS

- New coating and new tool geometry gives outstanding cutting performance and wear resistance.
- Excellent performance when cutting steels, up to HRc55
- Available in various length shanks and corner radiuses.



CARBIDE 2 30° R ±.0004 R ±.0006 PLAIN p.C277

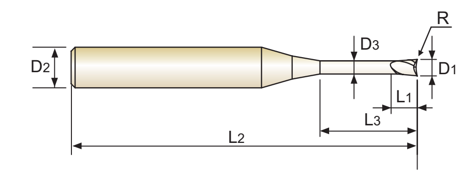
PLAIN SHANK GMF19 SERIES

CARBIDE, 2 FLUTE CORNER RADIUS WITH NECK

- New coating and new tool geometry gives outstanding cutting performance and wear resistance.
- Excellent performance when cutting steels, up to HRc55
- Available in many more various length shanks and corner radiuses.



CARBIDE 2 30° R ±.0004 R ±.0006 PLAIN p.C278-C281

4G MILL END MILLS

PLAIN SHANK **GMF20** SERIES

CARBIDE, 4 FLUTE CORNER RADIUS

- New coating and new tool geometry gives outstanding cutting performance and wear resistance.
- Excellent performance when cutting steels, up to HRc55
- Available in many more various length shanks and corner radiuses.
- Due to Multiple Helix on 1/8" and over diameter end mills, vibration is minimized and tool life increased.
- 4 flute series has new designs to reduce vibrations

4G MILL END MILLS

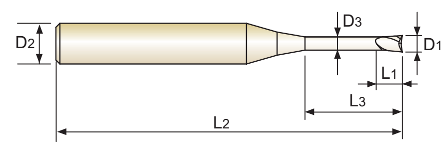
PLAIN SHANK **GMF22** SERIES

CARBIDE, 2 FLUTE WITH NECK

- New coating and new tool geometry gives outstanding cutting performance and wear resistance.
- Excellent performance when cutting steels, up to HRc55
- Due to Multiple Helix on 1/8" and over diameter end mills, vibration is minimized and tool life increased.
- For 1/32" and under 1/32" diameter sizes, double neck increases tool rigidity and minimizes vibration.
- Excellent for Rib Processing of various depths



CARBIDE 2 30° PLAIN

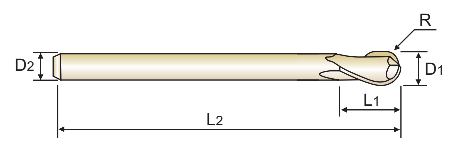
PLAIN SHANK **SEMD98** SERIES

CARBIDE, 2 FLUTE BALL NOSE (Short, Regular, Long Shank)

▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
▶Due to unique ball nose geometry and cutting edges, cutting force decreased, and wear resistance increased.
▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.



CARBIDE | 2 | 30° | R ±0.005 R≤3 | R ±0.010 R>3 | PLAIN

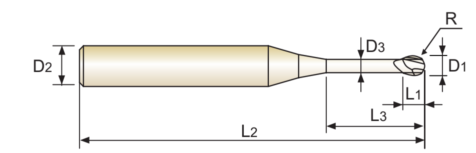
PLAIN SHANK **SEM846** SERIES

CARBIDE, 2 FLUTE LONG NECK BALL NOSE

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Due to unique ball nose geometry and cutting edges, cutting force decreased, and wear resistance increased.
- ▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.



CARBIDE 2 30° R ±0.005 R≤3 R ±0.010 R>3 PLAIN

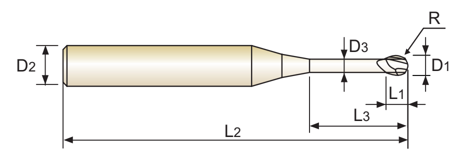
YG 4G MILL END MILLS

PLAIN SHANK **SEM846** SERIES

CARBIDE, 2 FLUTE LONG NECK BALL NOSE

▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
▶Due to unique ball nose geometry and cutting edges, cutting force decreased, and wear resistance increased.
▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.



CARBIDE | 2 | 30° | R ±0.005 R≤3 | R ±0.010 R>3 | PLAIN

PLAIN SHANK **SEM846** SERIES

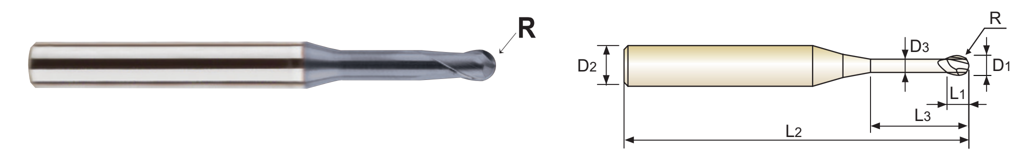
CARBIDE, 2 FLUTE LONG NECK BALL NOSE (6mm shank)

▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
▶Due to unique ball nose geometry and cutting edges, cutting force decreased, and wear resistance increased.
▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.



CARBIDE | 2 | 30° | R ±0.005 | PLAIN

4G MILL END MILLS

PLAIN SHANK **SEMD99** SERIES

CARBIDE, 2 FLUTE CORNER RADIUS (Short, Regular, Long Shank)

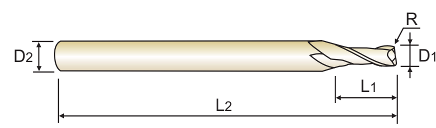
▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
▶Available short, regular and long shank end mills.
▶Available various corner radius end mills, from 0.02 mm to 5.0mm corner radius.



CARBIDE | 2 | 30° | R ±0.010 R≤6 | R ±0.015 D>6 | PLAIN

4G MILL END MILLS

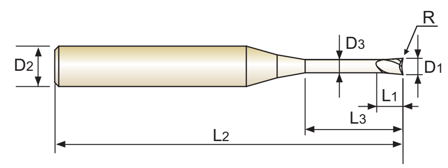
PLAIN SHANK **SEME61** SERIES

CARBIDE, 2 FLUTE LONG NECK CORNER RADIUS

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
- ▶Available various products like regular length and long shank end mills etc.
- ▶Available various corner radius end mills, from min. 0.02mm corner radius to max. 2.0 mm corner radius.
- ▶Available more various effective length and overall length end mills than previous standard products.



CARBIDE | 2 | 30° | R ±0.010 (R≤6) | R ±0.015 (D>6) | PLAIN

4G MILL END MILLS

PLAIN SHANK SEME61 SERIES

CARBIDE, 2 FLUTE LONG NECK CORNER RADIUS

▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
▶Available various products like regular length and long shank end mills etc.
▶Available various corner radius end mills, from min. 0.02mm corner radius to max. 2.0 mm corner radius.
▶Available more various effective length and overall length end mills than previous standard products.

CARBIDE, 2 FLUTE LONG NECK CORNER RADIUS

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
- ▶Available various products like regular length and long shank end mills etc.
- ▶Available various corner radius end mills, from min. 0.02mm corner radius to max. 2.0 mm corner radius.
- ▶Available more various effective length and overall length end mills than previous standard products.

YG 4G MILL END MILLS

PLAIN SHANK **SEME61** SERIES

CARBIDE, 2 FLUTE LONG NECK CORNER RADIUS

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
- ▶Available various products like regular length and long shank end mills etc.
- ▶Available various corner radius end mills, from min. 0.02mm corner radius to max. 2.0 mm corner radius.
- ▶Available more various effective length and overall length end mills than previous standard products.

4G MILL END MILLS

PLAIN SHANK **SEME61** SERIES

CARBIDE, 2 FLUTE LONG NECK CORNER RADIUS

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
- ▶Available various products like regular length and long shank end mills etc.
- ▶Available various corner radius end mills, from min. 0.02mm corner radius to max. 2.0 mm corner radius.
- ▶Available more various effective length and overall length end mills than previous standard products.

YG 4G MILL END MILLS

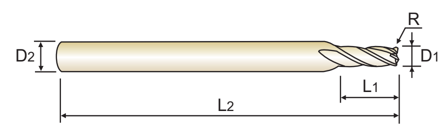
PLAIN SHANK **SEME01** SERIES

CARBIDE, 4 FLUTE CORNER RADIUS (Short, Regular, Long Shank)

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.
- ▶Due to Multiple Helix for 3.0mm and over 3.0mm diameter end mills, vibration can be minimized at cutting, and wear of cutting tool can be decreased too.
- ▶Available various products like short, regular and long shank end millls etc.



CARBIDE 4 27°/30° R ±0.02 PLAIN p.C333-C334

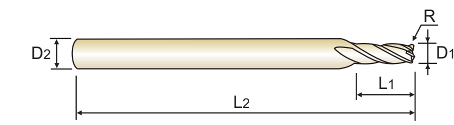
PLAIN SHANK **SEME01** SERIES

CARBIDE, 4 FLUTE CORNER RADIUS (Short, Regular, Long Shank)

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.
- ▶Due to Multiple Helix for 3.0mm and over 3.0mm diameter end mills, vibration can be minimized at cutting, and wear of cutting tool can be decreased too.
- ▶Available various products like short, regular and long shank end millls etc.



CARBIDE 4 27°/30° R ±0.02 PLAIN p.C333-C334

4G MILL END MILLS

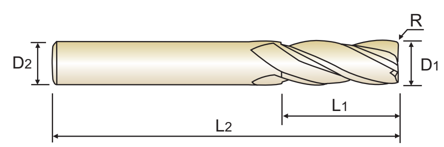
PLAIN SHANK **SEME01** SERIES

CARBIDE, 4 FLUTE CORNER RADIUS (Short, Regular, Long Shank)

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.
- ▶Due to Multiple Helix for 3.0mm and over 3.0mm diameter end mills, vibration can be minimized at cutting, and wear of cutting tool can be decreased too.
- ▶Available various products like short, regular and long shank end millls etc.



CARBIDE 4 27°/30° R ±0.02 PLAIN p.C333-C334

D1<Ø3.0, 30˚ Helix

YG 4G MILL END MILLS

PLAIN SHANK **SEME64** SERIES

CARBIDE, 4 FLUTE LONG NECK CORNER RADIUS

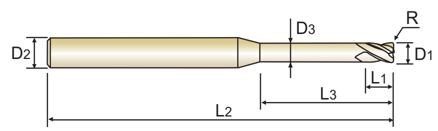
- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.
- ▶Due to Multiple Helix for 3.0mm and over 3.0mm diameter end mills, vibration can be minimized at cutting, and wear of cutting tool can be decreased too.



CARBIDE 4 27°/30° R ±0.02 PLAIN p.C335-C339

D1<Ø3.0, 30° Helix

4G MILL END MILLS

PLAIN SHANK **SEME64** SERIES

CARBIDE, 4 FLUTE LONG NECK CORNER RADIUS

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.
- ▶Due to Multiple Helix for 3.0mm and over 3.0mm diameter end mills, vibration can be minimized at cutting, and wear of cutting tool can be decreased too.

CARBIDE | 4 | 27°/30° | R ±0.02 | PLAIN

4G MILL END MILLS

PLAIN SHANK **SEME64** SERIES

CARBIDE, 4 FLUTE LONG NECK CORNER RADIUS

▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
▶Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.
▶Due to Multiple Helix for 3.0mm and over 3.0mm diameter end mills, vibration can be minimized at cutting, and wear of cutting tool can be decreased too.

CARBIDE 4 27°/30° R ±0.02 PLAIN

p.C335-C339

4G MILL END MILLS

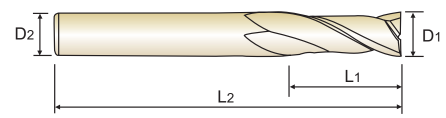
PLAIN SHANK **SEME70** SERIES

CARBIDE, 2 FLUTE LONG LENGTH

- Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.
- Available various length of cut and overall length end mills.



CARBIDE | 2 | 30° | PLAIN

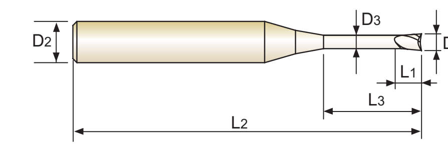
PLAIN SHANK **SEM845** SERIES

CARBIDE, 2 FLUTE LONG NECK

- ▶ Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶ Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
- ▶ For 1.0mm and under 1.0mm diameter sizes, designed double neck for increasing tool rigidity and minimizing vibration at working.
- ▶ Available various rib processing due to supplying various effective length and overall length products.



CARBIDE 2 30° PLAIN p.C351-C362

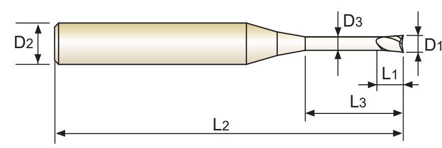
PLAIN SHANK **SEM845** SERIES

CARBIDE, 2 FLUTE LONG NECK

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
- ▶For 1.0mm and under 1.0mm diameter sizes, designed double neck for increasing tool rigidity and minimizing vibration at working.
- ▶Available various rib processing due to supplying various effective length and overall length products.



CARBIDE 2 30° PLAIN p.C351-C362

CARBIDE, 2 FLUTE LONG NECK

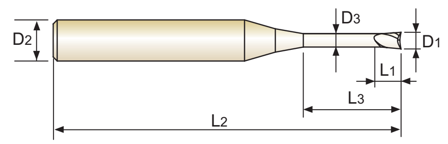
- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
- ▶For 1.0mm and under 1.0mm diameter sizes, designed double neck for increasing tool rigidity and minimizing vibration at working.
- ▶Available various rib processing due to supplying various effective length and overall length products.



CARBIDE 2 30° PLAIN p.C351-C362

4G MILL END MILLS

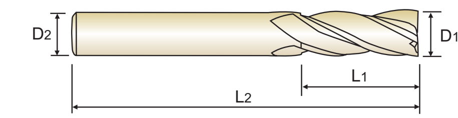
PLAIN SHANK **SEME71** SERIES

CARBIDE, 4 FLUTE

▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
▶Due to Multiple Helix for 3.0mm and over 3.0mm diameter end mills, vibration can be minimized at cutting, and wear of cutting tool can be decreased too.
- Designed equal index flute for long length end mills.
▶Due to gash land geometry used at end tooth, heavy duty cutting can be achieved.
▶Available various length products like short, regular and long length end mills etc.



CARBIDE | 4 | 35°/38° | PLAIN

4G MILL END MILLS

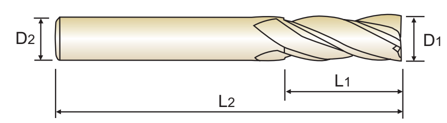
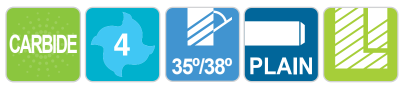
PLAIN SHANK **SEME71** SERIES

CARBIDE, 4 FLUTE

- ▶Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- ▶Excellent for cutting prehardened steels, carbon steels, alloy steels of molds and dies, up to HRc55 and machine parts.
- ▶Due to Multiple Helix for 3.0mm and over 3.0mm diameter end mills, vibration can be minimized at cutting, and wear of cutting tool can be decreased too.
  - Designed equal index flute for long length end mills.
- ▶Due to gash land geometry used at end tooth, heavy duty cutting can be achieved.
- ▶Available various length products like short, regular and long length end mills etc.





p.C363-C365

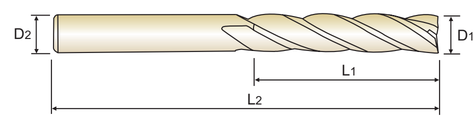
PLAIN SHANK **SEME72** SERIES

CARBIDE, 4 FLUTE LONG LENGTH

- Due to new coating and new tool geometry, outstanding cutting ability and wear resistance.
- Excellent performance when cutting prehardened steels, up to HRc55 which are used for molds & dies.
- Available various length of cut and overall length products.



CARBIDE 4 30° PLAIN p.C366-C373

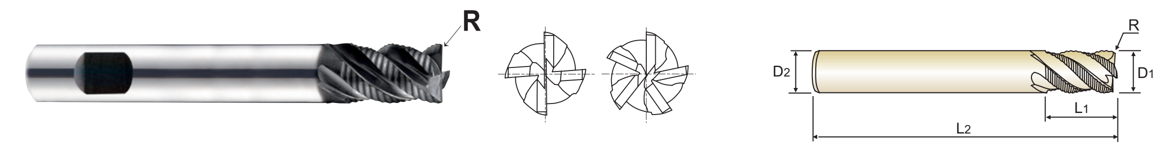
HSS-PM, 4&5 FLUTE MULTIPLE HELIX SHORT LENGTH ROUGHING CORNER RADIUS

- ▶ Unique flute design for excellent chip evacuation and vibration reduction.
- ▶ Optimal roughing tooth profile to reduce cutting forces.
- ▶ Special tool geometry for high feed rate and heavy cutting.
- ▶ Strong end tooth design for plunge and pocket milling.
- ▶ Custom engineered coating to allow long tool life and excellent chip evacuation.



CARBIDE 4&5 44°/45° FLAT

5 Flute, 44°/44.5°/45°

PLAIN SHANK **GM153** SERIES

CARBIDE, 4 FLUTE REGULAR LENGTH

- ▶ Designed to machine tool steel, alloy steel, mold steel and other high hardened materials.
- ▶ 4 flute allows for better workpiece finishes.
- ▶ Increased production.

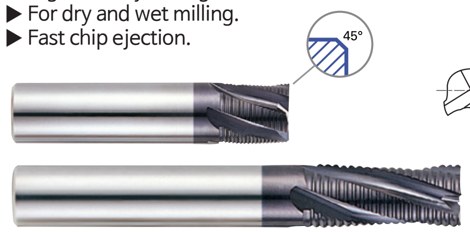
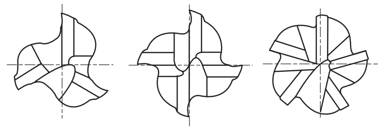
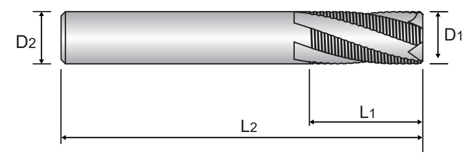
STUB LENGTH PLAIN SHANK **GM666** SERIES
LONG LENGTH PLAIN SHANK **GM156** SERIES

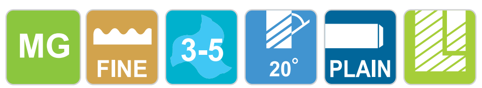
CARBIDE, MULTI FLUTE 20° HELIX STUB & LONG LENGTH FINE PITCH ROUGHING

- ▶ Designed to machine tool steel, alloy steel, mold steel and other high hardened materials.
- ▶ High velocity milling of hardened steels.
- ▶ For dry and wet milling.
- ▶ Fast chip ejection.









p.C445, 446

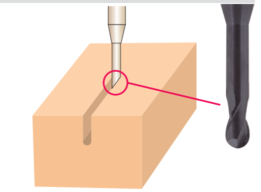
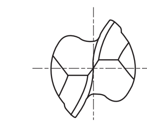
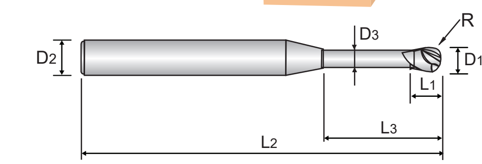
PLAIN SHANK **GM967** SERIES

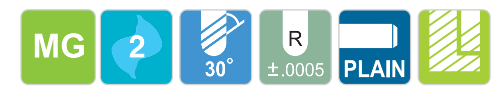
CARBIDE, 2 FLUTE BALL NOSE for RIB PROCESSING

- ▶ For 3-D milling, deep slotting and pocketing.
- ▶ For depths of 6 to 10X cutting diameter.
- ▶ Machine carbon steel, alloy steel, tool steel, die and mold steels.
- ▶ Suitable for high speed cutting and high precision machining.
- ▶ Designed with reinforced shank for higher stability and rigidity.
- ▶ Long neck design for deep machining near walls.









p.C447

YG X-POWER PRO END MILLS

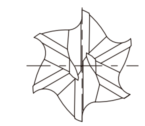
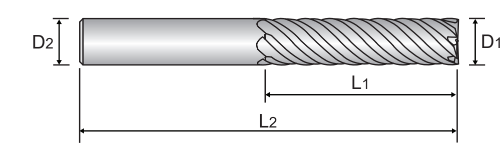
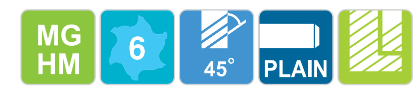
PLAIN SHANK **GM834** SERIES

CARBIDE, 6 FLUTE 45° HELIX EXTRA LONG LENGTH

- ▶ Designed to machine hardened materials
- ▶ High speed cutting and finish milling with high feed rates
- ▶ Superior workpiece finishes
- ▶ Superior wear resistant
- ▶ Suitable for dry milling







p.C469

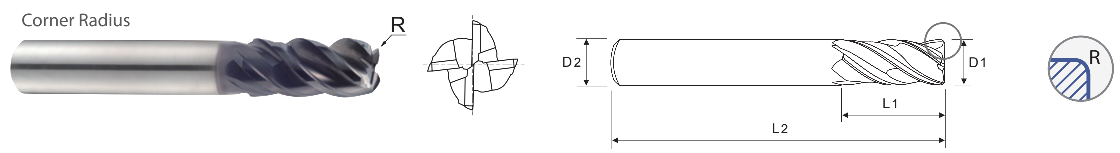
CORNER RADIUS **UGMG42** SERIES

CARBIDE, 4-FLUTE DOUBLE CORE STANDARD LENGTH (PLAIN SHANK)

- ▶ Double core end mill has a unique flute design for excellent chip evacuation and higher rigidity.
- ▶ The double core adds stability and aids chip flow, reducing tool deflection, improving dimensional stability and workpiece accuracy.



CARBIDE | 4 | 43°/45° | PLAIN | Y Coating

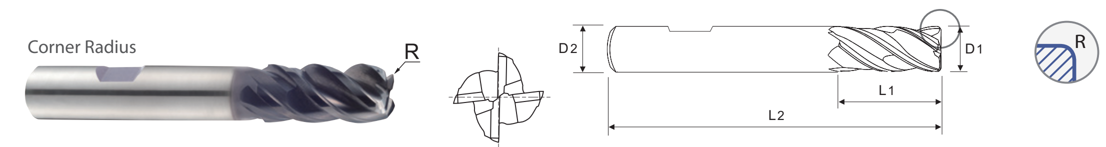
TitaNox-POWER END MILLS

CORNER RADIUS **UGMG43** SERIES

CARBIDE, 4-FLUTE STANDARD LENGTH (WELDON FLAT SHANK)

- ▶ Double core end mill has a unique flute design for excellent chip evacuation and higher rigidity.
- ▶ The double core adds stability and aids chip flow, reducing tool deflection, improving dimensional stability and workpiece accuracy.



CARBIDE | 4 | 43°/45° | FLAT | Y Coating

TitaNox-POWER END MILLS

CARBIDE, 5-FLUTE STANDARD LENGTH (PLAIN SHANK)

- ▶ Suitable for Titanium, Titanium Alloys, Inconel and Stainless Steels.
- ▶ Optimized flute design for chip evacuation and rigidity when machining difficult-to-cut materials.
- ▶ Special roughing profile for machining Titanium and Titanium Alloys.
- ▶ Longer tool life with special coating.

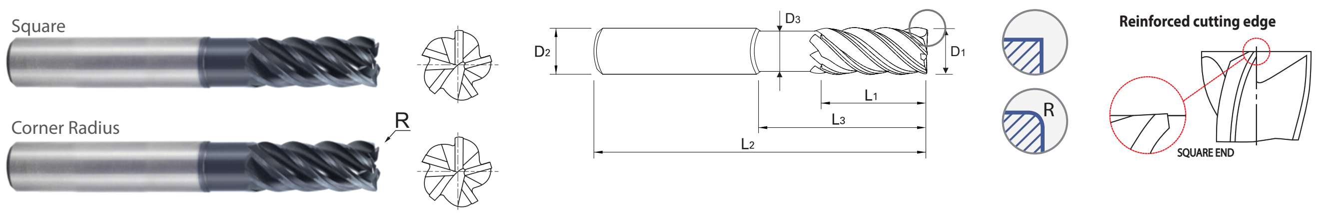
SQUARE **UGMH06** SERIES

CORNER RADIUS **UGMH07** SERIES

CARBIDE, 5-FLUTE EXTENDED LENGTH (PLAIN SHANK)

- Suitable for Titanium, Titanium Alloys, Inconel and Stainless Steels.
- Optimized flute design for chip evacuation and rigidity when machining difficult-to-cut materials.
- Special roughing profile for machining Titanium and Titanium Alloys.
- Longer tool life with special coating.



CARBIDE | 5 | 43°/44°/45° | PLAIN | Y Coating

YG TitaNox-POWER END MILLS

CORNER RADIUS **GMG40 SERIES**

CARBIDE, 4-FLUTE DOUBLE CORE EXTENDED LENGTH (PLAIN SHANK)

- Double core end mill has a unique flute design for excellent chip evacuation and higher rigidity.
- The double core adds stability and aids chip flow, reducing tool deflection, improving dimensional stability and workpiece accuracy.

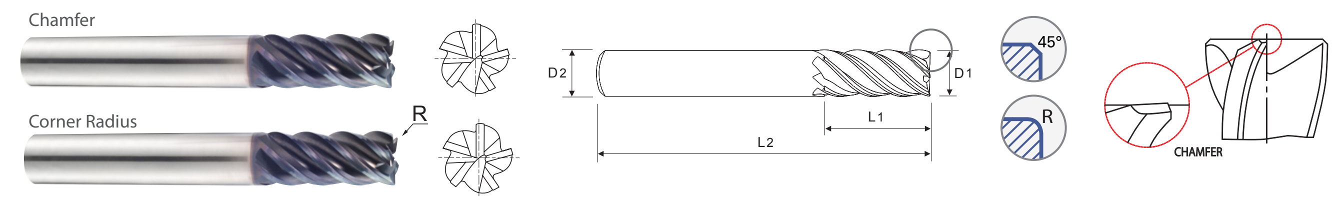
CHAMFER **GMG24, GMG26 SERIES**
CORNER RADIUS **GMG28, GMG30 SERIES**

CARBIDE, 5-FLUTE EXTENDED LENGTH (PLAIN SHANK)

- Suitable for Titanium, Titanium Alloys, Inconel and Stainless Steels.
- Optimized flute design for chip evacuation and rigidity when machining difficult-to-cut materials.
- Special roughing profile for machining Titanium and Titanium Alloys.
- Longer tool life with special coating.



CARBIDE | 5 | 43°/44°/45° | C x 45° | PLAIN | Y Coating

NOTES:
- Maximum recommended depth shown
- Finish cuts typically require reduced feed rates and/or higher spindle speed, with radial width of 2% x D1 or less
- Feed to be reduced by approximately 50% if L.O.C.(length of cut) is over 3xD
- Reduce speed and feed recommendations for materials harder than listed
- Recommendations above are based on ideal conditions. Adjust parameters accordingly for smaller taper machining centers or less rigid conditions

* (0.7D): UGMG42K998, UGMG42K999, UGMGK801

NOTES:
- Maximum recommended depth shown
- Finish cuts typically require reduced feed rates and/or higher spindle speed, with radial width of 2% x D1 or less
- Feed to be reduced by approximately 50% if L.O.C.(length of cut) is over 3xD
- Reduce speed and feed recommendations for materials harder than listed
- Recommendations above are based on ideal conditions. Adjust parameters accordingly for smaller taper machining centers or less rigid conditions

NOTES:
- Maximum recommended depth shown
- Finish cuts typically require reduced feed rates and/or higher spindle speed, with radial width of 2% x D1 or less
- Feed to be reduced by approximately 50% if L.O.C.(length of cut) is over 3xD
- Reduce speed and feed recommendations for materials harder than listed
- Recommendations above are based on ideal conditions. Adjust parameters accordingly for smaller taper machining centers or less rigid conditions

NOTES:
- Maximum recommended depth shown
- Finish cuts typically require reduced feed rates and/or higher spindle speed, with radial width of 2% x D1 or less
- Feed to be reduced by approximately 50% if L.O.C.(length of cut) is over 3xD
- Reduce speed and feed recommendations for materials harder than listed
- Recommendations above are based on ideal conditions. Adjust parameters accordingly for smaller taper machining centers or less rigid conditions

JET-POWER END MILLS

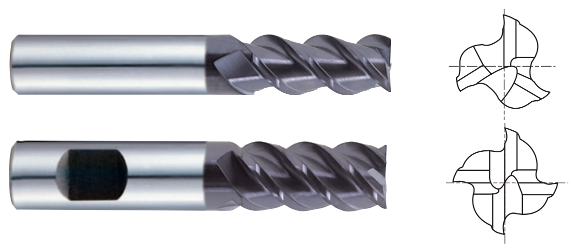
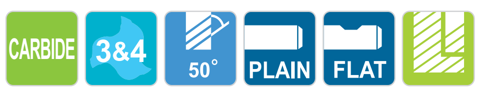
PLAIN SHANK
FLAT SHANK
EH108 SERIES

CARBIDE, 3&4 FLUTE 50° HELIX REGULAR LENGTH

- ▶ Suitable for low hardness materials (under HRc 45), alloy steels, tool steels, carbon steels, prehardened steels, stainless steels, inconel, nimonic, etc.
- ▶ Corner Protection against chipping.





p.C511-C512

JET-POWER END MILLS

FLAT SHANK
EE882 SERIES

HSS-PM, 6 FLUTE 35° HELIX REGULAR LENGTH

- ▶ Designed to machine low hardness materials (under HRc45), alloy steels, tool steels, carbon steels, prehardened steels, stainless steel, inconel, nimonic, etc.
- ▶ High velocity milling operation and good surface finishes.

PLAIN SHANK **EH852** SERIES

CARBIDE, MULTI FLUTE STUB LENGTH FINE PITCH ROUGHING

- Designed to machine low hardness materials (under HRc45), alloy steels, tool steels, carbon steels, prehardened steels, stainless steel, inconel, nimonic.
- High velocity milling operation.
- Fast chip ejection.

CARBIDE FINE 3-5 30° PLAIN

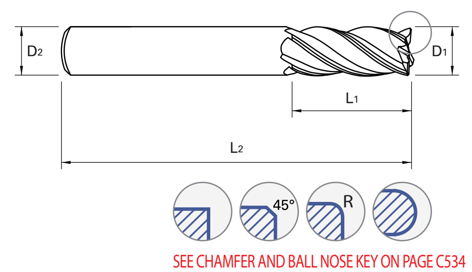
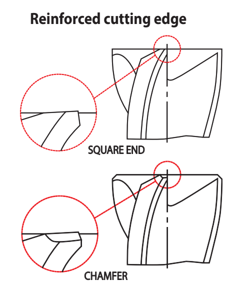
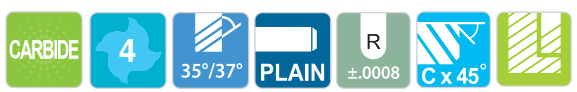
SQUARE **UGMF68** CHAMFER **UGMF76**
CORNER RADIUS **UGMF70** BALL NOSE **UGMG53**

CARBIDE, 4 FLUTE MULTIPLE LENGTH (PLAIN SHANK)

- Special flute geometry and multiple helix eliminate vibrations
- Excellent performance for stainless steels, mild steels, cast iron, low/medium hardness materials and all exotic materials up to HRc40
- Advanced coating for superior performance and tool life







p.C553-C555

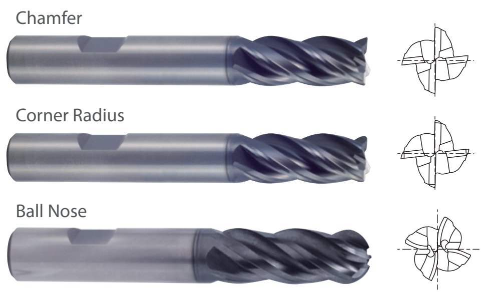
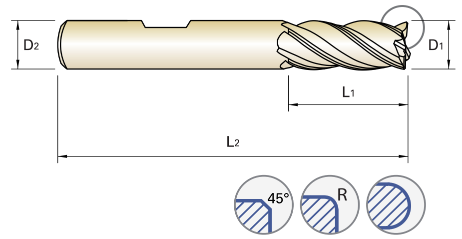
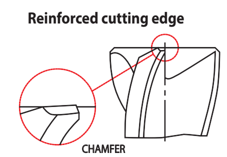
CHAMFER **GMF53 / GMF57 SERIES**
CORNER RADIUS **GMF55 / GMF59 SERIES**
BALL NOSE **GMG56 SERIES**

CARBIDE, 4 FLUTE MULTIPLE LENGTH (FLAT SHANK)

- Special flute geometry and multiple helix eliminate vibrations
- Excellent performance for stainless steels, mild steels, cast iron, low/medium hardness materials and all exotic materials up to HRc40
- Advanced coating for superior performance and tool life







CARBIDE | 4 | 35°/37° | FLAT | R ±0.02mm | C x 45°

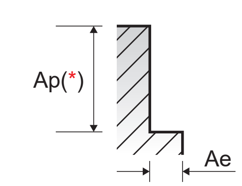
*( ) : Short length & Neck type



NOTES:
- Feed to be reduced by approximately 50% if L.O.C. (Length Of Cut) is over 3xD
- The above recommendations are based on ideal conditions; for smaller taper machining centers or less rigid conditions please adjust parameters accordingly on diameters greater than 1/2"
- In profile operations, engaging more that 2xD, reduce the radial depth of cut by 50%-60%
- Finish cuts typically require reduced cutting feeds and speeds; also, it is recommended the radial width of cut (AE) should not exceed 2%xD1

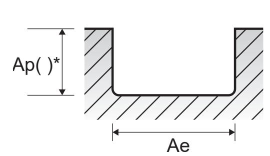
*( ) : Short length & Neck type



NOTES:
- Feed to be reduced by approximately 50% if L.O.C. (Length Of Cut) is over 3xD
- The above recommendations are based on ideal conditions; for smaller taper machining centers or less rigid conditions please adjust parameters accordingly on diameters greater than 1/2"
- In profile operations, engaging more that 2xD, reduce the radial depth of cut by 50%-60%
- Finish cuts typically require reduced cutting feeds and speeds; also, it is recommended the radial width of cut (AE) should not exceed 2%xD1

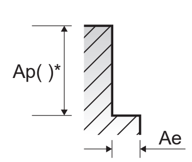
*( ) : Short length & Neck type



NOTES:

- Feed to be reduced by approximately 50% if L.O.C. (Length Of Cut) is over 3xD
- The above recommendations are based on ideal conditions; for smaller taper machining centers or less rigid conditions please adjust parameters accordingly on diameters greater than 1/2"
- In profile operations, engaging more that 2xD, reduce the radial depth of cut by 50%-60%
- Finish cuts typically require reduced cutting feeds and speeds; also, it is recommended the radial width of cut (AE) should not exceed 2%xD1

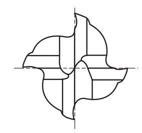
PLAIN SHANK **EMC75** SERIES
FLAT SHANK **EMD60** SERIES

CARBIDE, 4 FLUTE STUB LENGTH

▶ Special flute geometry eliminates vibrations
▶ Designed for mild steels, stainless steel, cast iron, tool steels, titanium alloys, prehardened steels and low hardness material
▶ Excellent work piece finishes
▶ Higher speeds, deeper cuts and metal removal rates



CARBIDE 4 PLAIN FLAT

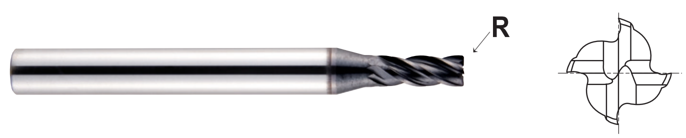
PLAIN SHANK **EMB43** SERIES
FLAT SHANK **EMB44** SERIES

CARBIDE, 4 FLUTE SHORT LENGTH CORNER RADIUS

- Special flute geometry eliminates vibrations
- Designed for mild steels, stainless steel, cast iron, tool steels, titanium alloys, prehardened steels and low hardness material
- Excellent work piece finishes
- Higher speeds, deeper cuts and metal removal rates



CARBIDE 4 PLAIN FLAT p.C581-C582
