

The **Edge™** Cutting Head *Always Sharp*

■ 360° Rotation

Engineered to allow the abrasive inlet tube to swivel to any position needed. With the ability to pivot 360° around the nozzle nut, the need for clocking is eliminated and machining costs are substantially reduced.

■ Slim Design

Designed to minimize unnecessary raw material and machining costs to provide a premium product at a competitive price.

This extremely low profile allows the cutting head to fit in previously unimaginable spaces, and fits very well in 5 axis systems where space is at a premium.

■ Removable Orifice

The Edge™ Cutting Head is designed to use readily available P-III orifices. Whether you choose Diamond or Ruby, the versatile design allows you to change orifice size quickly and easily.

■ Ease of Use

The Edge™ Cutting Head is compatible with all major manufacturers on/off valves for hassle free cutting head upgrades. Made to fit the P-III Nozzle Body and other 3/4-16 threads.

H2O Part Number

301050-1-xx

includes qty. 1 203501-xx sz 10-14

(xx denotes Ruby orifice size: .010 = 10)
