Nuzzler® Edge Clamps: High Grip

- Clamp Material: 1018 Steel
- Black Oxide Finish
- Features a double action, adjustable nose which exerts clamping pressures both downward and inward through a 45 degree angle.
- Noses have serrations for better gripping of non-finished or semi-finished workpieces
- Tapered slots prevent clamp from sliding off the work-piece during tightening
- Length "A" is calculated with nose raised 1/8"
- Clamp Washer is included with each Edge Clamp

Machinable Fixture Clamps

- Machinable steel washers provide more flexibility for holding round or unusual shape parts.
- Parts can be held directly to the fixture plate surface or elevated for through drilling.
- Special screw provided to hold the washer in the proper place during machining.
- Low Profile
- Made of mild steel for machinability

TalonGrip™ Vise Jaws Systems

Introducing a new and innovative product that will increase the functionality of your standard 4 and 6 inch vises. TalonGrip™ is a simple bolt on system that will allow you to perform aggressive machining operations while clamping on as little as .060 of an inch.

- Ideal for small lot sizes, difficult application or prototype work when building a fixture would not be beneficial.
- Also available individually for fixturing with the Pitbull® Clamp or soft jaw applications.

VersaGrip™ Vise Jaws Systems

Allows you the versatility of clamping standard vise work as well as providing a solution for difficult applications that would normally require fixturing or machining soft-jaws. By simply replacing your current jaws with the VersaGrip system you can securely hold odd shaped parts while machining at speeds and feeds never thought possible.

- Can accommodate a wide range of part sizes as well as holding multiple parts in a single cycle
- Hardened (52-54 RC) VersaGrip has penetrating teeth designed to bite into your workpiece preventing lateral and horizontal movement
- Will hold flame cuts parts, castings, even parts with a negative draft

ID Expansion™ Clamp

- Low profile
- Ideal for secondary operations on lathe parts
- Easily machined to size on lathe or mill
- Excellent for palletized setups
- Allows more parts per workcube or fixture plate
- Clamp body made of mild steel for machinability
- Tighten with hex key or hydraulic pull cylinders

Machinable Uniforce Clamps

- Hold round and unusual shaped parts with ease
- Compact method allows more parts per load at a lower price than vise soft jaw
- Available with extra material on the clamping jaws so it can be machined to conform to the shape of your workpiece
- Specially designed steel wedge spreads the clamping force uniformly on both sides of the 7075-T6 aluminum channel
- Unique locking plate makes the clamp rigid while machining the jaws to your specifications, without vibration

Installation Instructions:

1. Drill hole according to table. TE-CO insert can be used in extra deep or through hole.

2. Use standard size tap according to table.

3. Use bolt as illustrated to install TE-CO Insert. Nut prevents hang-up of TE-CO Insert on grip of bolt. Use two nuts locked against each other to shorten bolt to proper thread length.

TOOLING COMPONENTS

TE-CO Threaded Inserts

- Automatic self-locking external thread with use-activated adhesive
- Will not back out or vibrate loose
- Immediately on installation, micro-encapsulated epoxy molecules begin to set, and the newly installed insert can be fastened to within minutes. Adhesive continues to cure overnight until completely set
- Adhesive seals against liquids and gases to pressures of 6,000 psi and bonds to virtually all metals

Keylocking Inserts: Installation & Removal Information

1. Drill out old threads with a standard drill. Countersink with a standard (82-100 degree) countersink. Note: Drill is oversized, see charts for proper dimensions.

2. Tap new threads with a standard tap. See charts for proper size and depth.

If necessary, Thread Repair Inserts can be removed without damage to the parent material.

1. Drill out material between keys and internal thread with standard drill to specified depth from chart.
2. Bend the keys inward and break off.
3. Remove the old insert using an E-Z out or similar tool.
4. Install replacement insert into the original tapped hole.

3. Screw in the insert until slightly below surface

4. Drive keys down with several hammer taps on the proper installation tool.

Technical Notes

- Material: Carbon Steel Inserts: C1215 or equivalent
 Stainless Steel Inserts: 303
 Keys: 302
- Finish: Carbon Steel Inserts: Parkerized
 Stainless Steel Inserts: Passivated
- Tolerances: ± 0.010 inch or ± 0.25 mm unless specified otherwise
- Keys: Inserts with an internal thread size of 5/16 or M7 and larger are furnished with (4) locking keys

Dimensions are expressed in inches, except metric inserts are in millimeters

Inserts: Knife Thread Inserts for Wood

External knife threads provide superior holding power in hard and soft woods, particle board and all wood products.

Use wherever field assembly or disassembly could lead to thread erosion or stripping. The long pilot ensures straight driving into a drilled hole. Install with screw driver, bolt and nut, tapping head or driving tool.

5C Collet Stop Assembly

Part Number 35001

- Assembly includes:
 - Adjustable Collet Stop: Part Number 35002
 - Extension Tube: Part Number 35004
 - Stop Wrench: Part Number 35009
- For use with 5C collets

5C Adjustable Collet Stop

Part Number 35002

- Fully threaded adjustment screw
- Fits collet with internal threads
- Overall length = 4.12
- Black Oxide Finish

5C Collet Stop Extension Tube

Part Number 35004

- Adds 3" length to the collet stop
- Conveniently locates long parts
- Two or more tubes can be coupled for desired length
- Internal thread & external thread = 1.041-24

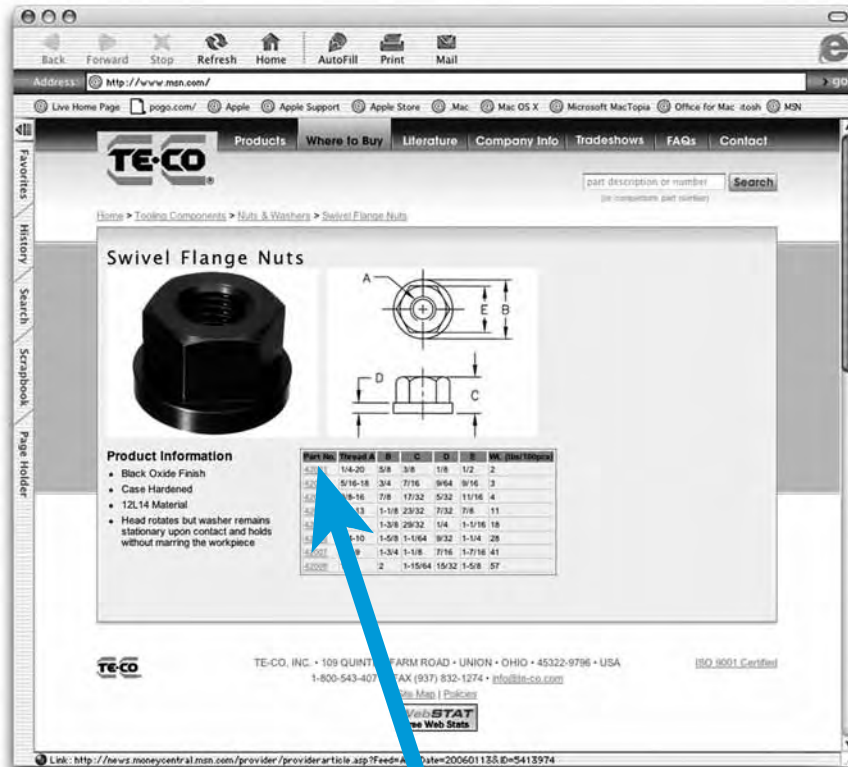

5C Collet Stop Wrench

Part Number 35009

- Easily tightens or removes collet stops
- Saves time and prevents damage to precision collets
- Wrench mates perfectly with collet
